

THE
REGISTRAR-GENERAL'S

WEEKLY RETURN OF
BIRTHS AND DEATHS

REGISTERED IN COUNTY BOROUGH
AND OTHER GREAT TOWNS AND
OF CASES OF CERTAIN SPECIFIED

INFECTIOUS DISEASES

NOTIFIED IN BOROUGH, URBAN &
RURAL DISTRICTS & PORT SANITARY
DISTRICTS IN ENGLAND AND WALES
DURING THE WEEK ENDED

SATURDAY, 7TH JANUARY,
1928

LONDON:

PRINTED AND PUBLISHED BY HIS MAJESTY'S STATIONERY OFFICE.

To be purchased directly from H.M. STATIONERY OFFICE at the following addresses:

Adastral House, Kingsway, London, W.C.2; 120, George Street, Edinburgh;

York Street, Manchester; 1, St. Andrew's Crescent, Cardiff;

15, Donegall Square West, Belfast;

or through any Bookseller.

1928.

Price 6d. net.

EXPLANATORY STATEMENT.

TABLE 1 shows, for the several towns, the births and deaths (distinguishing deaths from certain causes and those of infants under one year of age) for the week ended last Saturday.

TABLE 2 shows the births and deaths (distinguishing certain causes) and death rates in London and in certain cities in the British Empire and in foreign countries.

TABLE 3 shows the deaths in London at ages and by causes of death and by cause in the current year to date with corresponding figures for previous year.

TABLE 4 is a summary of returns of notified cases of certain Infectious Diseases (*vide infra*).

TABLE 5 shows for (a) London and (b) the Great Towns in the aggregate the births, deaths (distinguishing those of infants under one year of age) and numbers of notified cases of and deaths from certain diseases in each of the preceding thirteen weeks and in the current year to date with corresponding figures for previous year.

TABLE 6 is a Report of the meteorological conditions in certain towns for the week as a whole.

TABLE 7 is a Report of the meteorological observations taken at Greenwich on each day of the week.

WEEKLY SUMMARY OF INFECTIOUS DISEASES (TABLE 4).

1. Table 4 is a weekly Summary of notified cases of certain specified infectious diseases in England and Wales and is based upon weekly returns received from the Medical Officers of Health of all Local Sanitary Authorities, including Port Sanitary Authorities. The figures are now included in the present publication by arrangement with the Ministry of Health in pursuance of Section 5 of the Census Act, 1920.

2. The arrangement of this Table is as follows:—

Particulars for London are contained in Part I. Part II. contains particulars for sanitary districts, outside London, arranged under county headings; the counties being entered in alphabetical order. Particulars for Port Sanitary Districts are given in Part III.

Under each county, the names of (a) the Boroughs and Urban Districts and (b) the Rural Districts, are entered in alphabetical order.

The names of Boroughs and Urban Districts with populations of over 10,000, according to the last Census, are marked with a †.

County Boroughs are marked "C.B."

3. The names of districts in respect of which "Nil" returns have been received indicating that no cases of the specified infectious diseases have been notified during the week, are omitted from this Summary.

4. The infectious diseases comprised in this Summary include the more important infectious diseases which are notifiable under the general law, and also cerebro-spinal fever, acute poliomyelitis, plague, acute poli-encephalitis, encephalitis lethargica, pneumonia, dysentery, ophthalmia neonatorum, and puerperal pyrexia, which are notifiable either under the general law or under Orders which were made by the Local Government Board or Minister of Health.

The first five columns of the Summary relate to diseases specified in the headings to the columns: the heading "Diphtheria" includes Membranous Croup, the heading "Enteric Fever" includes Typhoid and Paratyphoid. The sixth column is intended to contain a figure (or figures) relating to one or more of the undermentioned diseases. In order to show to what disease any such figure relates, one of the following symbols is employed, viz.:—A, Cholera; B, Plague; C, Puerperal Fever; D, Cerebro-Spinal Fever; E, Acute Poliomyelitis; F, Acute Polio-encephalitis; G, Encephalitis Lethargica; H, Typhus Fever; I, Relapsing Fever; J, Continued Fever; L, Dysentery; M, Ophthalmia Neonatorum; N, Puerperal Pyrexia. Cases of Plague (if any) are mentioned specially in footnotes.

5. Quarterly and annual summaries of the information, adjusted in respect of any returns or corrections received too late for the weekly issues, will be published in due course.

NOTES FOR THE WEEK ENDED 7TH JANUARY, 1928.

BIRTHS AND DEATHS.

In the 107 County Boroughs and Great Towns of England and Wales the live births registered in the first week of the year numbered 6,958 corresponding to an annual rate of 18·5 per 1,000 living: stillbirths numbered 277 corresponding to a rate of 38 per 1,000 total births (including stillborn): the civilian deaths (excluding stillbirths) corrected as far as possible for non-residents numbered 6,593 (837 more than the number in the preceding week).

The annual death-rate in the Aggregate and in the largest of the County Boroughs and Great Towns in each of the last four weeks was as follows:—

—				Dec. 17.	Dec. 24.	Dec. 31.	Jan. 7.
107 Great Towns	12·8	15·7	15·4	17·6
London	11·9	15·6	14·9	17·5
Birmingham	13·3	14·0	15·7	17·7
Liverpool	14·4	19·0	19·9	20·4
Manchester	13·6	19·5	19·4	22·3
Sheffield	14·0	14·4	15·2	17·4
Leeds	12·6	15·8	15·1	16·7
Bristol	14·1	17·3	17·5	20·7
West Ham	12·1	12·5	13·7	15·5

Infant mortality, based on the average weekly number of live births during the last 52 weeks, was 93 against 71, 88 and 87 in the preceding three weeks: during the last four weeks deaths from influenza numbered 94, 120, 128 and 155 respectively, and from measles 81, 94, 60 and 107 respectively.

In London (Administrative County including the City of London) there were 1,636 live births corresponding to an annual rate of 18·5 per 1,000 living: stillbirths numbered 46 corresponding to a rate of 27 per 1,000 total births (including stillborn): the civilian deaths (excluding stillbirths) numbered 1,545 (230 more than the number in the preceding week): infant mortality based on the average weekly number of live births during the last 52 weeks was 63 against 57, 67 and 63 in the three weeks preceding: during the last four weeks deaths from influenza numbered 17, 17, 24 and 30 respectively and from measles 23, 33, 14 and 44 respectively.

One death from smallpox belonging to Bradford C.B. was registered last week.

* Population adjusted by the exclusion of non-civilians.

† The populations relate to 1928 except that of Belfast which is the Preliminary Census figure of 1926 yearly estimates having been discontinued. Deaths in Edinburgh and Glasgow are provisionally corrected by the deduction of deaths of non-residents domiciled in Scotland and by the addition of deaths of residents reported from elsewhere in Scotland during the week; those in Dublin Registration Area and Belfast are corrected by the exclusion of deaths of persons admitted into public institutions from without the respective areas.

‡ Including one death from smallpox.

The results apply to the Civil Day or from midnight to midnight.

The height of the stem of the barometer is 152 feet above the mean level of the sea ; no correction has been applied to the readings to reduce to sea level.

Observations are usually taken at 9h. A.M., noon, 3h. P.M., and 9h. P.M. The means of the eye-readings of the barometer, the dry bulb thermometer, and the wet bulb thermometer are converted into mean daily values by the application of corrections deduced from a discussion of the photographic records made during the 50 years ending 1903. With the corrected mean reading of the dry bulb thermometer is combined the corrected mean of the readings of the maximum and minimum thermometers, forming the mean daily value of the temperature of the air (column 8). The mean daily dew point temperature and degree of humidity are deduced from the mean daily values of the dry and wet bulb thermometers by Hygrometric Tables, issued by the Meteorological Office, Air Ministry.

The average temperature of the air is that derived from a discussion of the observations made at Greenwich during the 65 years ending 1903, and that of horizontal movement of the air from a discussion of the anemometric records for the 50 years ending 1916.

In reading columns 9 and 24 it will be borne in mind that + indicates "higher," and - "lower" than the average.

The values given in column 17 are not corrected for the index error of the thermometer, which cannot be determined.

The record of Electricity is derived from Thomson's self-registering Electrometer. The symbols employed are :—P. positive ; N. negative ; w. weak ; m. moderate ; s. strong ; v. variable.

The numbers in column 27, derived from the Campbell Stokes Sunshine Instrument show the aggregate duration of bright sunshine each day.

The reading of the barometer increased from 30.06 ins. at the beginning of the week to 30.20 ins. by 15h. on 1st ; decreased to 29.58 ins. by 15h. on 2. d. ; increased to 30.09 ins. by 20h. on 4th ; decreased to 29.75 ins. by 19h. on 4th ; increased to 30.06 ins. by 20h. on 5th ; decreased to 29.42 ins. by 13h. on 6th ; increased to 29.99 ins. by 3h. on 7th ; decreased and was 29.58 ins. by midnight on the same day.

EXPLANATORY STATEMENT.

TABLE 1 shows, for the several towns, the births and deaths (distinguishing deaths from certain causes and those of infants under one year of age) for the week ended last Saturday.

TABLE 2 shows the births and deaths (distinguishing certain causes) and death rates in London and in certain cities in the British Empire and in foreign countries.

TABLE 3 shows the deaths in London at ages and by causes of death and by cause in the current year to date with corresponding figures for previous year.

TABLE 4 is a summary of returns of notified cases of certain Infectious Diseases (*vide infra*).

TABLE 5 shows for (a) London and (b) the Great Towns in the aggregate the births, deaths (distinguishing those of infants under one year of age) and numbers of notified cases of and deaths from certain diseases in each of the preceding thirteen weeks and in the current year to date with corresponding figures for previous year.

TABLE 6 is a Report of the meteorological conditions in certain towns for the week as a whole.

TABLE 7 is a Report of the meteorological observations taken at Greenwich on each day of the week.

WEEKLY SUMMARY OF INFECTIOUS DISEASES (TABLE 4).

1. Table 4 is a weekly Summary of notified cases of certain specified infectious diseases in England and Wales and is based upon weekly returns received from the Medical Officers of Health of all Local Sanitary Authorities, including Port Sanitary Authorities. The figures are now included in the present publication by arrangement with the Ministry of Health in pursuance of Section 5 of the Census Act, 1920.

2. The arrangement of this Table is as follows:—

Particulars for London are contained in Part I. Part II. contains particulars for sanitary districts, outside London, arranged under county headings; the counties being entered in alphabetical order. Particulars for Port Sanitary Districts are given in Part III.

Under each county, the names of (a) the Boroughs and Urban Districts and (b) the Rural Districts, are entered in alphabetical order.

The names of Boroughs and Urban Districts with populations of over 10,000, according to the last Census, are marked with a †.

County Boroughs are marked "C.B."

3. The names of districts in respect of which "Nil" returns have been received indicating that no cases of the specified infectious diseases have been notified during the week, are omitted from this Summary.

4. The infectious diseases comprised in this Summary include the more important infectious diseases which are notifiable under the general law, and also cerebro-spinal fever, acute poliomyelitis, plague, acute poli-encephalitis, encephalitis lethargica, pneumonia, dysentery, ophthalmia neonatorum, and puerperal pyrexia, which are notifiable either under the general law or under Orders which were made by the Local Government Board or Minister of Health.

The first five columns of the Summary relate to diseases specified in the headings to the columns: the heading "Diphtheria" includes Membranous Croup, the heading "Enteric Fever" includes Typhoid and Paratyphoid. The sixth column is intended to contain a figure (or figures) relating to one or more of the undermentioned diseases. In order to show to what disease any such figure relates, one of the following symbols is employed, viz.:—A, Cholera; B, Plague; C, Puerperal Fever; D, Cerebro-Spinal Fever; E, Acute Poliomyelitis; F, Acute Poli-encephalitis; G, Encephalitis Lethargica; H, Typhus Fever; I, Relapsing Fever; J, Continued Fever; L, Dysentery; M, Ophthalmia Neonatorum; N, Puerperal Pyrexia. Cases of Plague (if any) are mentioned specially in footnotes.

5. Quarterly and annual summaries of the information, adjusted in respect of any returns or corrections received too late for the weekly issues, will be published in due course.

NOTES FOR THE WEEK ENDED 14TH JANUARY, 1928.

BIRTHS AND DEATHS.

In the 107 County Boroughs and Great Towns of England and Wales the live births registered in the second week of the year numbered 6,977 corresponding to an annual rate of 18·6 per 1,000 living: stillbirths numbered 300 corresponding to a rate of 41 per 1,000 total births (including stillborn): the civilian deaths (excluding stillbirths) corrected as far as possible for non-residents numbered 5,966 (626 less than the number in the preceding week).

The annual death-rate in the Aggregate and in the largest of the County Boroughs and Great Towns in each of the last four weeks was as follows:—

—	Dec. 24.	Dec. 31.	Jan. 7.	Jan. 14.
107 Great Towns	15·7	15·4	17·6	15·9
London	15·6	14·9	17·5	15·9
Birmingham	14·0	15·7	17·7	16·1
Liverpool	19·0	19·9	20·3	18·1
Manchester	19·5	19·4	22·3	20·6
Sheffield	14·4	15·2	17·4	14·9
Leeds	15·8	15·1	16·7	15·3
Bristol	17·3	17·5	20·7	18·0
West Ham	12·5	13·7	15·5	12·9

Infant mortality, based on the average weekly number of live births during the last 52 weeks, was 91 against 88, 87 and 93 in the preceding three weeks: during the last four weeks deaths from influenza numbered 120, 128, 155 and 145 respectively, and from measles 94, 60, 107 and 91 respectively.

In London (Administrative County including the City of London) there were 1,577 live births corresponding to an annual rate of 17·8 per 1,000 living: stillbirths numbered 49 corresponding to a rate of 30 per 1,000 total births (including stillborn): the civilian deaths (excluding stillbirths) numbered 1,404 (141 less than the number in the preceding week): infant mortality based on the average weekly number of live births during the last 52 weeks was 74 against 67, 63 and 63 in the three weeks preceding: during the last four weeks deaths from influenza numbered 17, 24, 30 and 16 respectively and from measles 33, 14, 44 and 31 respectively.

* Population adjusted by the exclusion of non-civilians.

† The populations relate to 1928 except that of Belfast which is the Preliminary Census figure of 1926 yearly estimates having been discontinued. Deaths in Edinburgh and Glasgow are provisionally corrected by the deduction of deaths of non-residents domiciled in Scotland and by the addition of deaths of residents reported from elsewhere in Scotland during the week; those in Dublin Registration Area and Belfast are corrected by the exclusion of deaths of persons admitted into public institutions from without the respective areas.

JANUARY.					
SUNDAY	8	wP.	3.1	8.0	Variably cloudy till 7h.; partially cloudy till 15h.; then nearly overcast. Brisk wind till 15h. Damping at 1h. Lunar halo 21h. till 24h. Dew at night.
MONDAY	9	wP till 16h.; wN till 17h.; then wP.	2.3	8.0	Nearly overcast till 11h.; partially cloudy till 12h.; nearly overcast till 18h., then becoming cloudless by 18h. Brisk wind 14h. till 18h. Dew at night.
TUESDAY	10	wP.	0.6	8.1	Cloudless till 7h.; partially cloudy till 9h.; nearly overcast till 17h.; then partially cloudy. Occasional damping between 12h. and 15h. and 14h. till 17h. Rain 15h. till 15h. Brisk wind 12h. till 15h.; and 20h. till 23h. High wind 12h. till 15h.
WEDNESDAY	11	wP till 7h.; wN till 9h.; wP till 14h.; then mP.	2.5	8.1	Partially cloudy becoming overcast by 7h. till 9h.; then partially cloudy becoming cloudless by 14h. Rain 7h. till 9h. Haze and hoar frost at night.
THURSDAY	12	wP	0.0	8.1	Cloudless till 5h.; partially cloudy till 7h.; then becoming overcast by 8h. Hoar frost in morning. Brisk wind from 10h. Rain 11h. till 13h.; and from 16h.
FRIDAY	13	wP.	3.4	8.2	Variably cloudy becoming cloudless by 16h. Lunar halo 3h. Rain till 11h. Brisk wind till 20h. Dew at night.
SATURDAY	14	wP till 8h.; mP till 11h.; then wP.	0.4	8.2	Cloudless till 1h.; partially cloudy till 6h.; then overcast generally. Rain 12h. to 13h.; about 15h.; and between 13h. and 21h. Brisk wind 12h. till 18h.
			Sum 12.3	Sum 56.7	
No. of Col. . .		26	27	28	

The results apply to the Civil Day or from midnight to midnight.
The height of the cistern of the barometer is 152 feet above the mean level of the sea; no correction has been applied to the readings to sea level.
Observations are usually taken at 9h. A.M., noon, 3h. P.M., and 9h. P.M. The means of the eye-readings of the barometer, the dry bulb thermometer, and the wet bulb thermometer are converted into mean daily values by the application of corrections deduced from a discussion of the photographic records made during the 50 years ending 1903. With the corrected mean reading of the dry bulb thermometer is combined the corrected mean of the readings of the maximum and minimum thermometer, forming the mean daily value of the temperature of the air (column 8). The mean daily dew point temperature and degree of humidity are deduced from the mean daily values of the dry and wet bulb thermometers by Hygrometric Tables, issued by the Meteorological Office, Air Ministry.
The average temperature of the air is that derived from a discussion of the observations made at Greenwich during the 65 years ending 1905, and that of horizontal movement of the air from a discussion of the anemometric records for the 50 years ending 1916.
In reading columns 9 and 24 it will be borne in mind that + indicates "higher," and - "lower" than the average.
The values given in column 17 are not corrected for the index error of the thermometer, which cannot be determined.
The record of Electricity is derived from Thomson's self-registering Electrometer. The symbols employed are:—P, positive; N, negative; w, weak; m, moderate; s, strong; v, variable.
The numbers in column 27 derived from the Campbell Stokes Sunshine Instrument show the aggregate duration of bright sunshine each day.
The reading of the barometer decreased from 29.58 ins. at the beginning of the week to 29.56 ins. by 2h. on 8th; increased to 29.78 ins. by 20h. on 8th; decreased to 29.65 ins. by 14h. on 9th; increased to 29.79 ins. by 3h. on 10th; decreased to 29.71 ins. by 10h.; increased to 29.96 ins. by 2h. on 12th; decreased to 29.41 ins. by 1h. on 13th; increased to 29.68 ins. by 2h. on 14th; decreased and was 29.38 ins. by midnight on the same day.

The results apply to the Civil Day or from midnight to midnight.

The height of the cistern of the barometer is 152 feet above the mean level of the sea; no correction has been applied to the readings to reduce to sea level.

Observations are usually taken at 9h. A.M., noon, 3h. P.M., and 9h. P.M. The means of the eye-readings of the barometer, the dry bulb thermometer, and the wet bulb thermometer are converted into mean daily values by the application of corrections deduced from a discussion of the photographic records made during the 50 years ending 1903. With the corrected mean reading of the dry bulb thermometer is combined the corrected mean of the readings of the maximum and minimum thermometer, forming the mean daily value of the temperature of the air (column 8). The mean daily dew point temperature and degree of humidity are deduced from the mean daily values of the dry and wet bulb thermometers by Hygrometric Tables, issued by the Meteorological Office, Air Ministry.

The average temperature of the air is that derived from a discussion of the observations made at Greenwich during the 65 years ending 1903, and that of horizontal movement of the air from a discussion of the anemometric records for the 80 years ending 1919.

In reading columns 9 and 24 it will be borne in mind that + indicates "higher," and - "lower" than the average.

The values given in column 17 are not corrected for the index error of the thermometer, which cannot be determined.

The record of Electricity is derived from Thomson's self-registering Electrometer. The symbols employed are:—P. positive; N. negative; w. weak; m. moderate; s. strong; v. variable.

The numbers in column 27 derived from the Campbell Stokes Sunshine Instrument show the aggregate duration of bright sunshine each day.

The reading of the barometer decreased from 29.68 ins. at the beginning of the week to 29.56 ins. by 2h. on 8th; increased to 29.78 ins. by 20h. on 8th; decreased to 29.65 ins. by 14h. on 9th; increased to 29.79 ins. by 3h. on 10th; decreased to 29.47 ins. by 15h. on 10th; increased to 29.94 ins. by 2h. on 12th; decreased to 29.41 ins. by 1h. on 13th; increased to 29.68 ins. by 2h. on 14th; decreased and was 29.38 ins. by midnight on the same day.

EXPLANATORY STATEMENT.

TABLE 1 shows, for the several towns, the births and deaths (distinguishing deaths from certain causes and those of infants under one year of age) for the week ended last Saturday.

TABLE 2 shows the births and deaths (distinguishing certain causes) and death rates in London and in certain cities in the British Empire and in foreign countries.

TABLE 3 shows the deaths in London at ages and by causes of death and by cause in the current year to date with corresponding figures for previous year.

TABLE 4 is a summary of returns of notified cases of certain Infectious Diseases (*vide infra*).

TABLE 5 shows for (a) London and (b) the Great Towns in the aggregate the births, deaths (distinguishing those of infants under one year of age) and numbers of notified cases of and deaths from certain diseases in each of the preceding thirteen weeks and in the current year to date with corresponding figures for previous year.

TABLE 6 is a Report of the meteorological conditions in certain towns for the week as a whole.

TABLE 7 is a Report of the meteorological observations taken at Greenwich on each day of the week.

WEEKLY SUMMARY OF INFECTIOUS DISEASES (TABLE 4).

1. Table 4 is a weekly Summary of notified cases of certain specified infectious diseases in England and Wales and is based upon weekly returns received from the Medical Officers of Health of all Local Sanitary Authorities, including Port Sanitary Authorities. The figures are now included in the present publication by arrangement with the Ministry of Health in pursuance of Section 5 of the Census Act, 1920.

2. The arrangement of this Table is as follows:—

Particulars for London are contained in Part I. Part II. contains particulars for sanitary districts, outside London, arranged under county headings; the counties being entered in alphabetical order. Particulars for Port Sanitary Districts are given in Part III.

Under each county, the names of (a) the Boroughs and Urban Districts and (b) the Rural Districts, are entered in alphabetical order.

The names of Boroughs and Urban Districts with populations of over 10,000, according to the last Census, are marked with a †.

County Boroughs are marked "C.B."

3. The names of districts in respect of which "Nil" returns have been received indicating that no cases of the specified infectious diseases have been notified during the week, are omitted from this Summary.

4. The infectious diseases comprised in this Summary include the more important infectious diseases which are notifiable under the general law, and also cerebro-spinal fever, acute poliomyelitis, plague, acute poli-encephalitis, encephalitis lethargica, pneumonia, dysentery, ophthalmia neonatorum, and puerperal pyrexia, which are notifiable either under the general law or under Orders which were made by the Local Government Board or Minister of Health.

The first five columns of the Summary relate to diseases specified in the headings to the columns: the heading "Diphtheria" includes Membranous Croup, the heading "Enteric Fever" includes Typhoid and Paratyphoid. The sixth column is intended to contain a figure (or figures) relating to one or more of the undermentioned diseases. In order to show to what disease any such figure relates, one of the following symbols is employed, viz.:—A, Cholera; B, Plague; C, Puerperal Fever; D, Cerebro-Spinal Fever; E, Acute Poliomyelitis; F, Acute Polio-encephalitis; G, Encephalitis Lethargica; H, Typhus Fever; I, Relapsing Fever; J, Continued Fever; L, Dysentery; M, Ophthalmia Neonatorum; N, Puerperal Pyrexia. Cases of Plague (if any) are mentioned specially in footnotes.

5. Quarterly and annual summaries of the information, adjusted in respect of any returns or corrections received too late for the weekly issues, will be published in due course.

NOTES FOR THE WEEK ENDED 21ST JANUARY, 1928.

BIRTHS AND DEATHS.

In the 107 County Boroughs and Great Towns of England and Wales the live births registered in the third week of the year numbered 6,584 corresponding to an annual rate of 17·5 per 1,000 living: stillbirths numbered 291 corresponding to a rate of 42 per 1,000 total births (including stillborn): the civilian deaths (excluding stillbirths) corrected as far as possible for non-residents numbered 5,444 (521 less than the number in the preceding week).

The annual death-rate in the Aggregate and in the largest of the County Boroughs and Great Towns in each of the last four weeks was as follows:—

—	Dec. 31.	Jan. 7.	Jan. 14.	Jan. 21.
107 Great Towns	15·4	17·6	15·9	14·5
London	14·9	17·5	15·9	13·9
Birmingham	15·7	17·7	16·1	14·3
Liverpool	19·9	20·3	18·1	17·8
Manchester	19·4	22·3	20·6	17·6
Sheffield	15·2	17·4	14·9	17·3
Leeds	15·1	16·7	15·3	14·1
Bristol	17·5	20·7	18·0	18·8
West Ham	13·7	15·5	12·9	9·7

Infant mortality, based on the average weekly number of live births during the last 52 weeks, was 79 against 87, 93 and 91 in the preceding three weeks: during the last four weeks deaths from influenza numbered 128, 155, 145 and 126 respectively, and from measles 60, 107, 91, and 94 respectively.

In London (Administrative County including the City of London) there were 1,465 live births corresponding to an annual rate of 16·6 per 1,000 living: stillbirths numbered 41 corresponding to a rate of 27 per 1,000 total births (including stillborn): the civilian deaths (excluding stillbirths) numbered 1,225 (178 less than the number in the preceding week): infant mortality based on the average weekly number of live births during the last 52 weeks was 57 against 63, 63 and 74 in the three weeks preceding: during the last four weeks deaths from influenza numbered 24, 30, 16 and 19 respectively and from measles 14, 44, 31 and 39 respectively.

One death from small-pox belonging to Bradford C.B. was registered last week.

* Population adjusted by the exclusion of non-civilians.

† The populations relate to 1928 except that of Belfast which is the Preliminary Census figure of 1926 yearly estimates having been discontinued. Deaths in Edinburgh and Glasgow are provisionally corrected by the deduction of deaths of non-residents domiciled in Scotland and by the addition of deaths of residents reported from elsewhere in Scotland during the week; those in Dublin Registration Area and Belfast are corrected by the exclusion of deaths of persons admitted into public institutions from without the respective areas.

‡ Including one death from small-pox.

The results apply to the Civil Day or from midnight to midnight.
The height of the cistern of the barometer is 132 feet above the mean level of the sea ; no correction has been applied to the readings to reduce to sea level.
Observations are usually taken at 9h. A.M., noon, 3h. P.M., and 9h. P.M. The means of the eye-readings of the barometer, the dry bulb thermometer, and the wet bulb thermometer are converted into mean daily values by the application of corrections deduced from a discussion of the photographic records made during the 50 years ending 1903. With the corrected mean reading of the dry bulb thermometer is combined the corrected mean of the readings of the maximum and minimum thermometers, forming the mean daily value of the temperature of the air (column 8). The mean daily dew point temperature and degree of humidity are deduced from the mean daily values of the dry and wet bulb thermometers by Hygrometric Tables, issued by the Meteorological Office, Air Ministry.
The average temperature of the air is that derived from a discussion of the observations made at Greenwich during the 65 years ending 1903, and that of horizontal movement of the air from a discussion of the anemometric records for the 50 years ending 1913.
In reading columns 9 and 24 it will be borne in mind that + indicates "higher," and - "lower" than the average.
The values given in column 17 are not corrected for the index error of the thermometer, which cannot be determined.
The record of Electricity is derived from Thomson's self-registering Electrometer. The symbols employed are: -P. positive; N. negative; w. weak; m. moderate; s. strong; v. variable.
The numbers in column 27, derived from the Campbell Stokes Sunshine Instrument show the aggregate duration of bright sunshine each day.
The reading of the barometer decreased from 29.38 ins. at the beginning of the week to 29.18 ins. by 5h. on 16th; increased to 29.84 ins. by 10h. on 18th; decreased to 29.66 ins. by 0h. on 18th; increased to 30.14 ins. by 8h. on 20th; decreased and was 29.69 ins. by midnight on the 21st.

EXPLANATORY STATEMENT.

TABLE 1 shows, for the several towns, the births and deaths (distinguishing deaths from certain causes and those of infants under one year of age) for the week ended last Saturday.

TABLE 2 shows the births and deaths (distinguishing certain causes) and death rates in London and in certain cities in the British Empire and in foreign countries.

TABLE 3 shows the deaths in London at ages and by causes of death and by cause in the current year to date with corresponding figures for previous year.

TABLE 4 is a summary of returns of notified cases of certain Infectious Diseases (*vide infra*).

TABLE 5 shows for (a) London and (b) the Great Towns in the aggregate the births, deaths (distinguishing those of infants under one year of age) and numbers of notified cases of and deaths from certain diseases in each of the preceding thirteen weeks and in the current year to date with corresponding figures for previous year.

TABLE 6 is a Report of the meteorological conditions in certain towns for the week as a whole.

TABLE 7 is a Report of the meteorological observations taken at Greenwich on each day of the week.

WEEKLY SUMMARY OF INFECTIOUS DISEASES (TABLE 4).

1. Table 4 is a weekly Summary of notified cases of certain specified infectious diseases in England and Wales and is based upon weekly returns received from the Medical Officers of Health of all Local Sanitary Authorities, including Port Sanitary Authorities. The figures are now included in the present publication by arrangement with the Ministry of Health in pursuance of Section 5 of the Census Act, 1920.

2. The arrangement of this Table is as follows:—

Particulars for London are contained in Part I. Part II. contains particulars for sanitary districts, outside London, arranged under county headings; the counties being entered in alphabetical order. Particulars for Port Sanitary Districts are given in Part III.

Under each county, the names of (a) the Boroughs and Urban Districts and (b) the Rural Districts, are entered in alphabetical order.

The names of Boroughs and Urban Districts with populations of over 10,000, according to the last Census, are marked with a †.

County Boroughs are marked "C.B."

3. The names of districts in respect of which "Nil" returns have been received indicating that no cases of the specified infectious diseases have been notified during the week, are omitted from this Summary.

4. The infectious diseases comprised in this Summary include the more important infectious diseases which are notifiable under the general law, and also cerebro-spinal fever, acute poliomyelitis, plague, acute poliomyelitis, encephalitis lethargica, pneumonia, dysentery, ophthalmia neonatorum, and puerperal pyrexia, which are notifiable either under the general law or under Orders which were made by the Local Government Board or Minister of Health.

The first five columns of the Summary relate to diseases specified in the headings to the columns: the heading "Diphtheria" includes Membranous Croup, the heading "Enteric Fever" includes Typhoid and Paratyphoid. The sixth column is intended to contain a figure (or figures) relating to one or more of the undermentioned diseases. In order to show to what disease any such figure relates, one of the following symbols is employed, viz.:—A, Cholera; B, Plague; C, Puerperal Fever; D, Cerebro-Spinal Fever; E, Acute Poliomyelitis; F, Acute Polio-encephalitis; G, Encephalitis Lethargica; H, Typhus Fever; I, Relapsing Fever; J, Continued Fever; L, Dysentery; M, Ophthalmia Neonatorum; N, Puerperal Pyrexia. Cases of Plague (if any) are mentioned specially in footnotes.

5. Quarterly and annual summaries of the information, adjusted in respect of any returns or corrections received too late for the weekly issues, will be published in due course.

NOTES FOR THE WEEK ENDED 28TH JANUARY, 1928.

BIRTHS AND DEATHS.

In the 107 County Boroughs and Great Towns of England and Wales the live births registered in the fourth week of the year numbered 6,521 corresponding to an annual rate of 17·4 per 1,000 living: stillbirths numbered 296 corresponding to a rate of 43 per 1,000 total births (including stillborn): the civilian deaths (excluding stillbirths) corrected as far as possible for non-residents numbered 4,963 (479 less than the number in the preceding week).

The annual death-rate in the Aggregate and in the largest of the County Boroughs and Great Towns in each of the last four weeks was as follows:—

—				Jan. 7.	Jan. 14.	Jan. 21.	Jan. 28.
107 Great Towns	17·6	15·9	14·5	13·2
London	17·5	15·9	13·9	12·7
Birmingham	17·7	16·1	14·3	13·5
Liverpool	20·3	18·1	17·8	18·4
Manchester	22·3	20·6	17·6	14·8
Sheffield	17·4	14·9	17·3	12·2
Leeds	16·7	15·3	14·1	13·5
Bristol	20·7	18·0	18·4	14·0
West Ham	15·5	12·9	9·7	13·7

Infant mortality, based on the average weekly number of live births during the last 52 weeks, was 77 against 93, 91 and 76 in the preceding three weeks: during the last four weeks deaths from influenza numbered 155, 145, 126 and 96 respectively, and from measles 107, 91, 94, and 102 respectively.

In London (Administrative County including the City of London) there were 1,509 live births corresponding to an annual rate of 17·0 per 1,000 living: stillbirths numbered 51 corresponding to a rate of 33 per 1,000 total births (including stillborn): the civilian deaths (excluding stillbirths) numbered 1,121 (105 less than the number in the preceding week): infant mortality based on the average weekly number of live births during the last 52 weeks was 65 against 63, 74 and 57 in the three weeks preceding: during the last four weeks deaths from influenza numbered 30, 16, 19 and 24 respectively and from measles 44, 31, 39 and 49 respectively.

Two deaths from small-pox belonging to Bradford C.B. were registered last week.

* Population adjusted by the exclusion of non-civilians.

† The populations relate to 1926 except that of Belfast which is the Preliminary Census figure of 1926 yearly estimates having been discontinued. Deaths in Edinburgh and Glasgow are provisionally corrected by the deduction of deaths of non-residents domiciled in Scotland and by the addition of deaths of residents reported from elsewhere in Scotland during the week; those in Dublin Registration Area and Belfast are corrected by the exclusion of deaths of persons admitted into public institutions from without the respective areas.

‡ Including two deaths from small-pox.

		Sum 4.2	Sum 60.8		
No. of Col.	27	28		

The results apply to the Civil Day or from midnight to midnight.
The height of the cistern of the barometer is 152 feet above the mean level of the sea; no observations have been applied to the readings to reduce to sea level.
Observations are usually taken at 9h. A.M., noon, 3h. P.M., and 9h. P.M. The means of the eye-readings of the barometer, the dry bulb thermometer, and the wet bulb thermometer are converted to mean daily values by the application of corrections deduced from a discussion of the photographic records made during the 50 years ending 1903. With the corrected mean reading of the dry bulb thermometer is combined the corrected mean of the readings of the maximum and minimum thermometers, forming the mean daily value of the temperature of the air (column 8). The mean daily dew point temperature and degree of humidity are deduced from the mean daily values of the dry and wet bulb thermometers by Hygrometric Tables, issued by the Meteorological Office, Air Ministry.
The average temperature of the air is that derived from a discussion of the observations made at Greenwich during the 65 years ending 1905, and that of horizontal movement of the air from a discussion of the anemometric records for the 50 years ending 1915.
In reading columns 9 and 24 it will be borne in mind that + indicates "higher," and - "lower" than the average.
The values given in column 17 are not corrected for the index error of the thermometer, which cannot be determined.
The record of Electricity is derived from Thomson's self-registering Electrometer. The symbols employed are: -P. positive; N. negative; w. weak; m. moderate; s. strong; v. variable.
The numbers in column 27, derived from the Campbell Stokes Sunshine Instrument show the aggregate duration of bright sunshine each day.
The reading of the barometer decreased from 29.59 ins. at the beginning of the week to 29.42 ins. by 6h. on 22nd; increased to 29.97 ins. by 8h. on 23rd; decreased to 29.53 ins. by 12h. on 24th; increased to 30.15 ins. by 11h. on 25th; decreased to 29.50 ins. by 19h. on 26th; increased to 30.07 by 1h. on 28th; decreased and was 29.57 ins. by midnight on the same day.

EXPLANATORY STATEMENT.

TABLE 1 shows, for the several towns, the births and deaths (distinguishing deaths from certain causes and those of infants under one year of age) for the week ended last Saturday.

TABLE 2 shows the births and deaths (distinguishing certain causes) and death rates in London and in certain cities in the British Empire and in foreign countries.

TABLE 3 shows the deaths in London at ages and by causes of death and by cause in the current year to date with corresponding figures for previous year.

TABLE 4 is a summary of returns of notified cases of certain Infectious Diseases (*vide infra*).

TABLE 5 shows for (a) London and (b) the Great Towns in the aggregate the births, deaths (distinguishing those of infants under one year of age) and numbers of notified cases of and deaths from certain diseases in each of the preceding thirteen weeks and in the current year to date with corresponding figures for previous year.

TABLE 6 is a Report of the meteorological conditions in certain towns for the week as a whole.

TABLE 7 is a Report of the meteorological observations taken at Greenwich on each day of the week.

WEEKLY SUMMARY OF INFECTIOUS DISEASES (TABLE 4).

1. Table 4 is a weekly Summary of notified cases of certain specified infectious diseases in England and Wales and is based upon weekly returns received from the Medical Officers of Health of all Local Sanitary Authorities, including Port Sanitary Authorities. The figures are now included in the present publication by arrangement with the Ministry of Health in pursuance of Section 5 of the Census Act, 1920.

2. The arrangement of this Table is as follows:—

Particulars for London are contained in Part I. Part II, contains particulars for sanitary districts, outside London, arranged under county headings; the counties being entered in alphabetical order. Particulars for Port Sanitary Districts are given in Part III.

Under each county, the names of (a) the Boroughs and Urban Districts and (b) the Rural Districts, are entered in alphabetical order.

The names of Boroughs and Urban Districts with populations of over 10,000, according to the last Census, are marked with a †.

County Boroughs are marked "C.B."

3. The names of districts in respect of which "Nil" returns have been received indicating that no cases of the specified infectious diseases have been notified during the week, are omitted from this Summary.

4. The infectious diseases comprised in this Summary include the more important infectious diseases which are notifiable under the general law, and also cerebro-spinal fever, acute poliomyelitis, plague, acute poli-encephalitis, encephalitis lethargica, pneumonia, dysentery, ophthalmia neonatorum, and puerperal pyrexia, which are notifiable either under the general law or under Orders which were made by the Local Government Board or Minister of Health.

The first five columns of the Summary relate to diseases specified in the headings to the columns: the heading "Diphtheria" includes Membranous Croup, the heading "Enteric Fever" includes Typhoid and Paratyphoid. The sixth column is intended to contain a figure (or figures) relating to one or more of the undermentioned diseases. In order to show to what disease any such figure relates, one of the following symbols is employed, viz.:—A, Cholera; B, Plague; C, Puerperal Fever; D, Cerebro-Spinal Fever; E, Acute Poliomyelitis; F, Acute Polio-encephalitis; G, Encephalitis Lethargica; H, Typhus Fever; I, Relapsing Fever; J, Continued Fever; L, Dysentery; M, Ophthalmia Neonatorum; N, Puerperal Pyrexia. Cases of Plague (if any) are mentioned specially in footnotes.

5. Quarterly and annual summaries of the information, adjusted in respect of any returns or corrections received too late for the weekly issues, will be published in due course.

NOTES FOR THE WEEK ENDED 4TH FEBRUARY, 1928.

BIRTHS AND DEATHS.

In the 107 County Boroughs and Great Towns of England and Wales the live births registered in the fifth week of the year numbered 6,788 corresponding to an annual rate of 18·1 per 1,000 living: stillbirths numbered 270 corresponding to a rate of 39 per 1,000 total births (including stillborn): the civilian deaths (excluding stillbirths) corrected as far as possible for non-residents numbered 5,058 (95 more than the number in the preceding week).

The annual death-rate in the Aggregate and in the largest of the County Boroughs and Great Towns in each of the last four weeks was as follows:—

—				Jan. 14.	Jan. 21.	Jan. 28.	Feb. 4.
107 Great Towns	15·9	14·5	13·2	13·5
London	15·9	13·9	12·7	13·3
Birmingham	16·1	14·3	13·5	12·7
Liverpool	18·1	17·8	18·4	17·8
Manchester	20·6	17·6	14·8	15·4
Sheffield	14·9	17·3	12·2	13·4
Leeds	15·3	14·1	13·5	13·3
Bristol	18·0	18·4	14·0	15·1
West Ham	12·9	9·7	13·7	14·5

Infant mortality, based on the average weekly number of live births during the last 52 weeks, was 94 against 91, 76 and 77 in the preceding three weeks: during the last four weeks deaths from influenza numbered 145, 126, 96 and 81 respectively, and from measles 91, 94, 102, and 98 respectively.

In London (Administrative County including the City of London) there were 1,566 live births corresponding to an annual rate of 17·7 per 1,000 living: stillbirths numbered 42 corresponding to a rate of 26 per 1,000 total births (including stillborn): the civilian deaths (excluding stillbirths) numbered 1,174 (53 more than the number in the preceding week): infant mortality based on the average weekly number of live births during the last 52 weeks was 75 against 74, 57 and 65 in the three weeks preceding: during the last four weeks deaths from influenza numbered 16, 19, 24 and 8 respectively and from measles 31, 39, 49 and 45 respectively.

* Population adjusted by the exclusion of non-civilians.

† The populations relate to 1923 except that of Belfast which is the Preliminary Census figure of 1926 yearly estimates having been discontinued. Deaths in Edinburgh and Glasgow are provisionally corrected by the deduction of deaths of non-residents domiciled in Scotland and by the addition of deaths of residents reported from elsewhere in Scotland during the week; those in Dublin Registration Area and Belfast are corrected by the exclusion of deaths of persons admitted into public institutions from without the respective areas.

No. of Col.. ..	26	27	28	

The results apply to the Civil Day or from midnight to midnight. The height of the cistern of the barometer is 162 feet above the mean level of the sea; no observations have been applied to the barometer readings to reduce to sea level. Observations are usually taken at 9h. A.M., noon, 3h. P.M., and 9h. P.M. The means of the eye-readings of the barometer, the dry bulb thermometer, and the wet bulb thermometer are converted into mean photographic records made during the 50 years ending 1903. With the corrected mean reading of the dry bulb thermometer is combined the corrected mean of the readings of the maximum and minimum thermometers, forming the mean daily value of the temperature of the air (column 8). The mean daily dew point temperature and degree of humidity are deduced from the mean daily values of the dry and wet bulb thermometers by Hygrometric Tables, issued by the Meteorological Office, Air Ministry.

The average temperature of the air is that derived from a discussion of the observations made at Greenwich during the 65 years ending 1903, and that of horizontal movement of the air from a discussion of the anemometric records for the 50 years ending 1903.

In reading columns 9 and 24 it will be borne in mind that + indicates "higher," and - "lower" than the average.

The values given in column 17 are not corrected for the index error of the thermometer, which cannot be determined.

The record of Electricity is derived from Thomson's self-registering Electrometer. The symbols employed are: - F. positive; N. negative; w. weak; m. moderate; s. strong; v. variable.

The numbers in column 27, derived from the Campbell Stokes Sunshine Instrument show the aggregate duration of bright sunshine each day.

The reading of the barometer decreased from 29·57 ins. at the beginning of the week to 29·31 ins. by 1h. on January 30th; increased to 29·73 ins. by 10h. on January 31st.; decreased to 29·37 ins. by 3h. on February 1st; increased to 29·76 ins. by 10h. on February 2nd; decreased to 29·45 ins. by 18h. on February 2nd; increased to 30·14 ins. by 8h. on February 4th; decreased and was 29·82 ins. by midnight on the same day.

EXPLANATORY STATEMENT.

TABLE 1 shows, for the several towns, the births and deaths (distinguishing deaths from certain causes and those of infants under one year of age) for the week ended last Saturday.

TABLE 2 shows the births and deaths (distinguishing certain causes) and death rates in London and in certain cities in the British Empire and in foreign countries.

TABLE 3 shows the deaths in London at ages and by causes of death and by cause in the current year to date with corresponding figures for previous year.

TABLE 4 is a summary of returns of notified cases of certain Infectious Diseases (*vide infra*).

TABLE 5 shows for (a) London and (b) the Great Towns in the aggregate the births, deaths (distinguishing those of infants under one year of age) and numbers of notified cases of and deaths from certain diseases in each of the preceding thirteen weeks and in the current year to date with corresponding figures for previous year.

TABLE 6 is a Report of the meteorological conditions in certain towns for the week as a whole.

TABLE 7 is a Report of the meteorological observations taken at Greenwich on each day of the week.

WEEKLY SUMMARY OF INFECTIOUS DISEASES (TABLE 4).

1. TABLE 4 is a weekly Summary of notified cases of certain specified infectious diseases in England and Wales and is based upon weekly returns received from the Medical Officers of Health of all Local Sanitary Authorities, including Port Sanitary Authorities. The figures are now included in the present publication by arrangement with the Ministry of Health in pursuance of Section 5 of the Census Act, 1920.

2. The arrangement of this Table is as follows:—

Particulars for London are contained in Part I. Part II. contains particulars for sanitary districts, outside London, arranged under county headings; the counties being entered in alphabetical order. Particulars for Port Sanitary Districts are given in Part III.

Under each county, the names of (a) the Boroughs and Urban Districts and (b) the Rural Districts, are entered in alphabetical order.

The names of Boroughs and Urban Districts with populations of over 10,000 according to the last Census, are marked with a †.

County Boroughs are marked "C.B."

3. The names of districts in respect of which "Nil" returns have been received indicating that no cases of the specified infectious diseases have been notified during the week, are omitted from this Summary.

4. The infectious diseases comprised in this Summary include the more important infectious diseases which are notifiable under the general law, and also cerebro-spinal fever, acute poliomyelitis, plague, acute poliomyelitis, encephalitis lethargica, pneumonia, dysentery, ophthalmia neonatorum, and puerperal pyrexia, which are notifiable either under the general law or under Orders which were made by the Local Government Board or Minister of Health.

The first five columns of the Summary relate to diseases specified in the headings to the columns: the heading "Diphtheria" includes Membranous Croup, the heading "Enteric Fever" includes Typhoid and Paratyphoid. The sixth column is intended to contain a figure (or figures) relating to one or more of the undermentioned diseases. In order to show to what disease any such figure relates, one of the following symbols is employed viz.:—A, Cholera; B, Plague; C, Puerperal Fever; D, Cerebro-Spinal Fever; E, Acute Poliomyelitis; F, Acute Polio-encephalitis; G, Encephalitis Lethargica; H, Typhus Fever; I, Relapsing Fever; J, Continued Fever; L, Dysentery; M, Ophthalmia Neonatorum; N, Puerperal Pyrexia. Cases of Plague (if any) are mentioned specially in footnotes.

5. Quarterly and annual summaries of the information, adjusted in respect of any returns or corrections received too late for the weekly issues, will be published in due course.

NOTES FOR THE WEEK ENDED 11TH FEBRUARY, 1928.

BIRTHS AND DEATHS.

In the 107 County Boroughs and Great Towns of England and Wales the live births registered in the sixth week of the year numbered 6,522 corresponding to an annual rate of 17·4 per 1,000 living: stillbirths numbered 295 corresponding to a rate of 43 per 1,000 total births (including stillborn): the civilian deaths (excluding stillbirths) corrected as far as possible for non-residents numbered 4,954 (104 less than the number in the preceding week).

The annual death-rate in the Aggregate and in the largest of the County Boroughs and Great Towns in each of the last four weeks was as follows:—

—				Jan. 21.	Jan. 28.	Feb. 4.	Feb. 11.
107 Great Towns	14·5	13·2	13·5	13·2
London	13·9	12·7	13·3	13·0
Birmingham	14·3	13·5	12·7	12·2
Liverpool	17·8	18·4	17·8	17·9
Manchester	17·6	14·8	15·4	14·8
Sheffield	17·3	12·2	13·4	12·5
Leeds	14·1	13·5	13·3	12·6
Bristol	18·4	14·0	15·1	14·0
West Ham	9·7	13·7	14·5	12·4

Infant mortality, based on the average weekly number of live births during the last 52 weeks, was 85 against 76, 77 and 94 in the preceding three weeks: during the last four weeks deaths from influenza numbered 126, 96, 81 and 111 respectively, and from measles 94, 102, 98, and 78 respectively.

In London (Administrative County including the City of London) there were 1,503 live births corresponding to an annual rate of 17·0 per 1,000 living: stillbirths numbered 46 corresponding to a rate of 30 per 1,000 total births (including stillborn): the civilian deaths (excluding stillbirths) numbered 1,146 (28 less than the number in the preceding week): infant mortality based on the average weekly number of live births during the last 52 weeks was 61 against 57, 65 and 75 in the three weeks preceding: during the last four weeks deaths from influenza numbered 19, 24, 8 and 24 respectively and from measles 39, 49, 45 and 45 respectively.

Two deaths from small pox were registered in the 107 Great Towns last week, one belonging to London (Southwark Met. B.), and one to Newcastle-on-Tyne C.B.

* Population adjusted by the exclusion of non-civilians.

† The populations relate to 1928 except that of Belfast which is the Preliminary Census figure of 1926 yearly estimates having been discontinued. Deaths in Edinburgh and Glasgow are provisionally corrected by the deduction of deaths of non-residents domiciled in Scotland and by the addition of deaths of residents reported from elsewhere in Scotland during the week; those in Dublin Registration Area and Belfast are corrected by the exclusion of deaths of persons admitted into public institutions from without the respective areas.

‡ Including one death from Small-pox.

The results apply to the Civil Day or from midnight to midnight.

The height of the cistern of the barometer is 152 feet above the mean level of the sea; no correction has been applied to the readings to reduce to sea level.

Observations are usually taken at 9h. A.M., noon, 3h. P.M., and 9h. P.M. The means of the eye-readings of the barometer, the dry bulb thermometer, and the wet bulb thermometer are converted into mean daily values by the application of corrections deduced from a discussion of the photographic records made during the 50 years ending 1903. With the corrected mean reading of the dry bulb thermometer is combined the corrected mean of the readings of the maximum and minimum thermometers, forming the mean daily value of the temperature of the air (column 8). The mean daily dew point temperature and degree of humidity are deduced from the mean daily values of the dry and wet bulb thermometers by Hygrometric Tables, issued by the Meteorological Office, Air Ministry.

The average temperature of the air is that derived from a discussion of the observations made at Greenwich during the 65 years ending 1905, and that of horizontal movement of the air from a discussion of the anemometric records for the 50 years ending 1905.

In reading columns 9 and 24 it will be borne in mind that + indicates "higher," and - "lower," than the average.

The values given in column 17 are not corrected for the index error of the thermometer, which cannot be determined.

The record of Electricity is derived from Thomson's self-registering Electrometer. The symbols employed are:—P. positive; N. negative; w. weak; m. moderate; s. strong; v. variable.

The numbers in column 27 derived from the Campbell Stokes Sunshine Instrument show the aggregate duration of bright sunshine each day.

The reading of the barometer decreased from 29.92 ins. at the beginning of the week to 29.69 ins. by 11h. on February 5th; increased to 30.35 ins. by 0h. on February 7th; decreased to 29.96 ins. by 4h. on February 9th; increased to 30.11 ins. by 11h. on February 9th; decreased generally to 29.02 ins. by 16h. on February 11th; increased and was 29.21 ins. by midnight of the same day.

GENERAL REMARKS.

DATE. FEBRUARY.	ELECTRICITY. (For explanation of symbols, see Note.)	Registered Sunshine in hours.	Sun above Horizon in hours.	
SUNDAY ..	5 wP	0.7	9.3	Overcast generally till 17h.; little cloud from 17h. Rain or damping till 12h. Brisk wind till 12h.
MONDAY ..	6 wP	6.2	9.4	Cloudless or nearly so till 12h.; very cloudy generally from 14h. Hoar frost and mist in morning. Dew at night. Lunar halo 24h.
TUESDAY ..	7 wP	0.0	9.4	Th. in cloud prevalent till 9h.; overcast with thick cloud by 9h. Lunar halo till 11h. Haze in morning. Damping 2 h. till 22h. Brisk wind from 9h.
WEDNESDAY	8 wP	0.0	9.4	Overcast generally. Occasional slight damping from 9h. Brisk wind till 6h., and from 12h.
THURSDAY	9 wP	1.6	9.5	Overcast till 4h.; less cloudy till 12h.; overcast again soon afterwards. Rain 5h. till 6h. Brisk wind till 9h., and 12h. till 16h.
FRIDAY	10 wP till 16h.; variable till 17h.; then wP.	0.0	9.5	Overcast till 3h.; nearly cloudless by 5h.; overcast again by 7h. Partially cloudy 18h. to 22h. Dew in morning. Occasional damping 9h. till 16h. 10m., then rain till 17h. Squall with heavy rain and hail 16h. 40m. Brisk wind 14h. till 22h., high wind till 23h., then gale.
SATURDAY	11 wP till 20h.; variable till 22h.; then wP.	2.0	9.6	Cloudy generally till 8h.; little cloud till 9h.; overcast generally from 10h. Gale till 14h., then high wind till 2 h. Rain 12h. till 13h., and damping 20h.

EXPLANATORY STATEMENT.

TABLE 1 shows, for the several towns, the births and deaths (distinguishing deaths from certain causes and those of infants under one year of age) for the week ended last Saturday.

TABLE 2 shows the births and deaths (distinguishing certain causes) and death rates in London and in certain cities in the British Empire and in foreign countries.

TABLE 3 shows the deaths in London at ages and by causes of death and by cause in the current year to date with corresponding figures for previous year.

TABLE 4 is a summary of returns of notified cases of certain Infectious Diseases (*vide infra*).

TABLE 5 shows for (a) London and (b) the Great Towns in the aggregate the births, deaths (distinguishing those of infants under one year of age) and numbers of notified cases of and deaths from certain diseases in each of the preceding thirteen weeks and in the current year to date with corresponding figures for previous year.

TABLE 6 is a Report of the meteorological conditions in certain towns for the week as a whole.

TABLE 7 is a Report of the meteorological observations taken at Greenwich on each day of the week.

WEEKLY SUMMARY OF INFECTIOUS DISEASES (TABLE 4).

1. TABLE 4 is a weekly Summary of notified cases of certain specified infectious diseases in England and Wales and is based upon weekly returns received from the Medical Officers of Health of all Local Sanitary Authorities, including Port Sanitary Authorities. The figures are now included in the present publication by arrangement with the Ministry of Health in pursuance of Section 5 of the Census Act, 1920.

2. The arrangement of this Table is as follows:—

Particulars for London are contained in Part I. Part II. contains particulars for sanitary districts, outside London, arranged under county headings; the counties being entered in alphabetical order. Particulars for Port Sanitary Districts are given in Part III.

Under each county, the names of (a) the Boroughs and Urban Districts and (b) the Rural Districts, are entered in alphabetical order.

The names of Boroughs and Urban Districts with populations of over 10,000 according to the last Census, are marked with a †.

County Boroughs are marked "C.B."

3. The names of districts in respect of which "Nil" returns have been received indicating that no cases of the specified infectious diseases have been notified during the week, are omitted from this Summary.

4. The infectious diseases comprised in this Summary include the more important infectious diseases which are notifiable under the general law, and also cerebro-spinal fever, acute poliomyelitis, plague, acute polio-encephalitis, encephalitis lethargica, pneumonia, dysentery, ophthalmia neonatorum, and puerperal pyrexia, which are notifiable either under the general law or under Orders which were made by the Local Government Board or Minister of Health.

The first five columns of the Summary relate to diseases specified in the headings to the columns: the heading "Diphtheria" includes Membranous Croup, the heading "Enteric Fever" includes Typhoid and Paratyphoid. The sixth column is intended to contain a figure (or figures) relating to one or more of the undermentioned diseases. In order to show to what disease any such figure relates, one of the following symbols is employed viz.:—A, Cholera; B, Plague; C, Puerperal Fever; D, Cerebro-Spinal Fever; E, Acute Poliomyelitis; F, Acute Polio-encephalitis; G, Encephalitis Lethargica; H, Typhus Fever; I, Relapsing Fever; J, Continued Fever; L, Dysentery; M, Ophthalmia Neonatorum; N, Puerperal Pyrexia. Cases of Plague (if any) are mentioned specially in footnotes.

5. Quarterly and annual summaries of the information, adjusted in respect of any returns or corrections received too late for the weekly issues, will be published in due course.

NOTES FOR THE WEEK ENDED 18TH FEBRUARY, 1928.

BIRTHS AND DEATHS.

In the 107 County Boroughs and Great Towns of England and Wales the live births registered in the seventh week of the year numbered 6,596 corresponding to an annual rate of 17·6 per 1,000 living: stillbirths numbered 294 corresponding to a rate of 43 per 1,000 total births (including stillborn): the civilian deaths (excluding stillbirths) corrected as far as possible for non-residents numbered 5,036 (83 more than the number in the preceding week).

The annual death-rate in the Aggregate and in the largest of the County Boroughs and Great Towns in each of the last four weeks was as follows:—

—	Jan. 28*.	Feb. 4*.	Feb. 11*.	Feb. 18.
107 Great Towns	13·2	13·5	13·2	13·4
London	12·9	13·5	13·2	12·9
Birmingham	13·2	12·5	12·0	12·0
Liverpool	18·2	17·6	17·7	17·8
Manchester	14·8	15·4	14·8	15·5
Sheffield	12·1	13·3	12·4	11·8
Leeds	13·4	13·2	12·4	15·8
Bristol	13·9	15·0	13·9	15·3
West Ham	13·7	14·5	12·4	12·7

Infant mortality, based on the average weekly number of live births during the last 52 weeks, was 86 against 77, 94 and 85 in the preceding three weeks: during the last four weeks deaths from influenza numbered 96, 81, 111 and 83 respectively, and from measles 102, 98, 78, and 89 respectively.

In London (Administrative County including the City of London) there were 1,470 live births corresponding to an annual rate of 16·9 per 1,000 living: stillbirths numbered 62 corresponding to a rate of 40 per 1,000 total births (including stillborn): the civilian deaths (excluding stillbirths) numbered 1,124 (22 less than the number in the preceding week): infant mortality based on the average weekly number of live births during the last 52 weeks was 73 against 65, 75 and 61 in the three weeks preceding: during the last four weeks deaths from influenza numbered 24, 8, 24, and 5 respectively and from measles 49, 45, 45 and 44 respectively.

* The rates for these weeks, having been revised on populations estimated to the middle of 1927, differ in some cases from those previously shown in this Table.

* Population adjusted by the exclusion of non-civilians

† The populations relate to 1928 except that of Belfast which is the Preliminary Census figure of 1926 yearly estimates having been discontinued. Deaths in Edinburgh and Glasgow are provisionally corrected by the deduction of deaths of non-residents domiciled in Scotland and by the addition of deaths of residents reported from elsewhere in Scotland during the week: those in Dublin Registration Area and Belfast are corrected by the exclusion of deaths of persons admitted into public institutions from without the respective areas.

DATE.	ELECTRICITY. (For explanation of symbols, see Note.)	Registered Sunshine in hours.	Sun above Horizon in hours.	GENERAL REMARKS.	
FEBRUARY.					
SUNDAY	12 wP till 10 ³⁰ h.; mN till 18h.; sN till 20h.; then wP.	0·0	9·7	Variably cloudy till 10h.; then overcast. Shower 14h. Rain 10 ³⁰ h. till 10 ³⁰ h. Solar halos 8 ³⁰ h. till 12h. Mist till 15h.	<p>The results apply to the Civil Day or from midnight to midnight. The height of the cistern of the barometer is 153 feet above the mean level of the sea; no correction has been applied to the readings to reduce to sea level. Observations are usually taken at 9h. A.M., noon, 3h. P.M., and 9h. P.M. The means of the eye-readings of the barometer, the dry bulb thermometer, and the wet bulb thermometer are converted into mean daily values by the application of corrections deduced from a discussion of the photographic records made during the 50 years ending 1903. With the corrected mean reading of the dry bulb thermometer is combined the corrected mean of the readings of the maximum and minimum thermometers, forming the mean daily value of the temperature of the air (column 8). The mean daily dew point temperature and degree of humidity are deduced from the mean daily values of the dry and wet bulb thermometers by Hygrometric Tables, issued by the Meteorological Office, Air Ministry.</p> <p>The average temperature of the air is that derived from a discussion of the observations made at Greenwich during the 65 years ending 1905, and that of horizontal movement of the air from a discussion of the anemometric records for the 50 years ending 1913.</p> <p>In reading columns 9 and 24 it will be borne in mind that + indicates "higher," and - "lower" than the average.</p> <p>The values given in column 17 are not corrected for the index error of the thermometer, which cannot be determined.</p> <p>The record of Electricity is derived from Thomson's self-registering Electrometer. The symbols employed are: -P. positive; N. negative; w. weak; m. moderate; s. strong; v. variable.</p> <p>The numbers in column 27, derived from the Campbell Stokes Sunshine Instrument show the aggregate duration of bright sunshine each day.</p> <p>The reading of the barometer increased from 29·21 ins. at the beginning of the week to 29·53 ins. by 11h. on 12th; decreased to 29·14 ins. by 13h. on 13th; increased to 29·86 ins. by 22h. on 15th; decreased to 29·67 ins. by 10h. on 16th; increased and was 30·19 ins. by midnight on the 18th.</p>
MONDAY	13 wP	0·1	9·8	Overcast till 10 ³⁰ h.; becoming cloudless by 20 ⁴⁰ h. Rain 7h. till 10 ³⁰ h. Brisk wind 12h. till 17h. Dew at night.	
TUESDAY	14 wP	0·2	9·8	Cloudless till 3h.; then becoming overcast by 7h. Damping 12 ³⁰ h. till 13h.; and 16h. till 20h. Rain 20h. till 22 ⁴⁰ h.	
WEDNESDAY	15 wP	0·0	9·9	Overcast throughout. Damping at 0h. and 2h. Rain about 5h. Brisk wind from 7h.	
THURSDAY	16 wP	0·2	9·9	Overcast till 15 ⁴⁰ h.; then variably cloudy. Brisk wind from 2h. rising to high wind between 9h. and 11h.; and 19h. till 21h. Frequent damping between 10h. and 15h.	
FRIDAY	17 wP till 0 ³⁰ h.; sN till 1 ⁴⁰ h.; wP till 13h.; mP till 16h.; then wP.	6·0	10·0	Variably cloudy, becoming overcast by 20 ⁴⁰ h. High wind till 16h.; then brisk wind till 22h. Shower at 1h.; Rain 20 ⁴⁰ h. till 21 ⁴⁰ h.	
SATURDAY	18 wP	4·3	10·1	Partially cloudy till 12h.; then variably cloudy. Dew and mist in morning.

EXPLANATORY STATEMENT.

TABLE 1 shows, for the several towns, the births and deaths (distinguishing deaths from certain causes and those of infants under one year of age) for the week ended last Saturday.

TABLE 2 shows the births and deaths (distinguishing certain causes) and death rates in London and in certain cities in the British Empire and in foreign countries.

TABLE 3 shows the deaths in London at ages and by causes of death and by cause in the current year to date with corresponding figures for previous year.

TABLE 4 is a summary of returns of notified cases of certain Infectious Diseases (*vide infra*).

TABLE 5 shows for (a) London and (b) the Great Towns in the aggregate the births, deaths (distinguishing those of infants under one year of age) and numbers of notified cases of and deaths from certain diseases in each of the preceding thirteen weeks and in the current year to date with corresponding figures for previous year.

TABLE 6 is a Report of the meteorological conditions in certain towns for the week as a whole.

TABLE 7 is a Report of the meteorological observations taken at Greenwich on each day of the week.

WEEKLY SUMMARY OF INFECTIOUS DISEASES (TABLE 4).

1. TABLE 4 is a weekly Summary of notified cases of certain specified infectious diseases in England and Wales and is based upon weekly returns received from the Medical Officers of Health of all Local Sanitary Authorities, including Port Sanitary Authorities. The figures are now included in the present publication by arrangement with the Ministry of Health in pursuance of Section 5 of the Census Act, 1920.

2. The arrangement of this Table is as follows:—

Particulars for London are contained in Part I. Part II. contains particulars for sanitary districts, outside London, arranged under county headings; the counties being entered in alphabetical order. Particulars for Port Sanitary Districts are given in Part III.

Under each county, the names of (a) the Boroughs and Urban Districts and (b) the Rural Districts, are entered in alphabetical order.

The names of Boroughs and Urban Districts with populations of over 10,000 according to the last Census, are marked with a †.

County Boroughs are marked "C.B."

3. The names of districts in respect of which "Nil" returns have been received indicating that no cases of the specified infectious diseases have been notified during the week, are omitted from this Summary.

4. The infectious diseases comprised in this Summary include the more important infectious diseases which are notifiable under the general law, and also cerebro-spinal fever, acute poliomyelitis, plague, acute poliomyelitis, encephalitis lethargica, pneumonia, dysentery, ophthalmia neonatorum, and puerperal pyrexia, which are notifiable either under the general law or under Orders which were made by the Local Government Board or Minister of Health.

The first five columns of the Summary relate to diseases specified in the headings to the columns: the heading "Diphtheria" includes Membranous Croup, the heading "Enteric Fever" includes Typhoid and Paratyphoid. The sixth column is intended to contain a figure (or figures) relating to one or more of the undermentioned diseases. In order to show to what disease any such figure relates, one of the following symbols is employed viz.:—A, Cholera; B, Plague; C, Puerperal Fever; D, Cerebro-Spinal Fever; E, Acute Poliomyelitis; F, Acute Polio-encephalitis; G, Encephalitis Lethargica; H, Typhus Fever; I, Relapsing Fever; J, Continued Fever; L, Dysentery; M, Ophthalmia Neonatorum; N, Puerperal Pyrexia. Cases of Plague (if any) are mentioned specially in footnotes.

5. Quarterly and annual summaries of the information, adjusted in respect of any returns or corrections received too late for the weekly issues, will be published in due course.

NOTES FOR THE WEEK ENDED 25TH FEBRUARY, 1928.

BIRTHS AND DEATHS.

In the 107 County Boroughs and Great Towns of England and Wales the live births registered in the eighth week of the year numbered 6,775 corresponding to an annual rate of 18·0 per 1,000 living: stillbirths numbered 258 corresponding to a rate of 37 per 1,000 total births (including stillborn): the civilian deaths (excluding stillbirths) corrected as far as possible for non-residents numbered 4,954 (81 less than the number in the preceding week).

The annual death-rate in the Aggregate and in the largest of the County Boroughs and Great Towns in each of the last four weeks was as follows:—

—	Feb. 4*.	Feb. 11*.	Feb. 18.	Feb. 25.
107 Great Towns	13·5	13·2	13·4	13·2
London	13·5	13·2	12·9	12·9
Birmingham	12·5	12·0	12·0	11·3
Liverpool	17·6	17·7	17·8	14·9
Manchester	15·4	14·8	15·5	12·8
Sheffield	13·3	12·4	11·8	14·0
Leeds	13·2	12·4	15·8	15·1
Bristol	15·0	13·9	15·3	14·2
West Ham	14·5	12·4	12·7	14·4

Infant mortality, based on the average weekly number of live births during the last 52 weeks, was 86 against 94, 85 and 86 in the preceding three weeks: during the last four weeks deaths from influenza numbered 81, 111, 83 and 98 respectively, and from measles 98, 78, 89, and 117 respectively.

In London (Administrative County including the City of London) there were 1,546 live births corresponding to an annual rate of 17·8 per 1,000 living: stillbirths numbered 48 corresponding to a rate of 30 per 1,000 total births (including stillborn): the civilian deaths (excluding stillbirths) numbered 1,126 (2 more than the number in the preceding week): infant mortality based on the average weekly number of live births during the last 52 weeks was 71 against 75, 61 and 73 in the three weeks preceding: during the last four weeks deaths from influenza numbered 8, 24, 5, and 20 respectively and from measles 45, 45, 44 and 66 respectively.

One death from small-pox belonging to Bradford C.B. was registered last week.

* The rates for these weeks, having been revised on populations estimated to the middle of 1927, differ in some cases from those previously shown in this Table.

* Population adjusted by the exclusion of non-civilians

† The populations relate to 1928 except that of Belfast which is the Preliminary Census figure of 1926
yearly estimates having been discontinued. Deaths in Edinburgh and Glasgow are provisionally
corrected by the deduction of deaths of non-residents domiciled in Scotland and by the addition of
deaths of residents reported from elsewhere in Scotland during the week; those in Dublin Registration
Area and Belfast are corrected by the exclusion of deaths of persons admitted into public institutions
from without the respective areas.

‡ Including one death from Small-pox.

The results apply to the Civil Day or from midnight to midnight.

The height of the cistern of the barometer is 152 feet above the mean level of the sea; no correction has been applied to the readings to reduce to sea level.

Observations are usually taken at 9h. A.M., noon, 3h. P.M., and 9h. P.M. The means of the eye-readings of the barometer, the dry bulb thermometer, and the wet bulb thermometer are converted into mean daily values by the application of corrections deduced from a discussion of the photographic records made during the 50 years ending 1903.

With the corrected mean reading of the dry bulb thermometer is combined the corrected mean of the readings of the maximum and minimum thermometers, forming the mean daily value of the temperature of the air (column 8). The mean daily dew point temperature and degree of humidity are deduced from the mean daily values of the dry and wet bulb thermometers by Hygrometric Tables, issued by the Meteorological Office, Air Ministry.

The average temperature of the air is that derived from a discussion of the observations made at Greenwich during the 65 years ending 1905, and that of horizontal movement of the air from a discussion of the anemometric records for the 50 years ending 1915.

In reading columns 9 and 24 it will be borne in mind that + indicates "higher," and - "lower" than the average.

The values given in column 17 are not corrected for the index error of the thermometer, which cannot be determined.

The record of Electricity is derived from Thomson's self-registering Electrometer. The symbols employed are:—P. positive; N. negative; w. weak; m. moderate; s. strong; v. variable.

The numbers in column 27, derived from the Campbell Stokes Sunshine Instrument show the aggregate duration of bright sunshine each day.

The reading of the barometer increased from 30.19 ins. at the beginning of the week to 30.38 ins. by 11h. on 20th; decreased to 30.26 ins. by 17h. on 21st; increased to 30.37 ins. by 10h. on 22nd; decreased to 30.06 ins. by 15h. on 24th; increased to 30.9 ins. by 21h. on 25th; decreased and was 30.18 ins. by midnight on the same day.

EXPLANATORY STATEMENT.

TABLE 1 shows, for the several towns, the births and deaths (distinguishing deaths from certain causes and those of infants under one year of age) for the week ended last Saturday.

TABLE 2 shows the births and deaths (distinguishing certain causes) and death rates in London and in certain cities in the British Empire and in foreign countries.

TABLE 3 shows the deaths in London at ages and by causes of death and by cause in the current year to date with corresponding figures for previous year.

TABLE 4 is a summary of returns of notified cases of certain Infectious Diseases (*vide infra*).

TABLE 5 shows for (a) London and (b) the Great Towns in the aggregate the births, deaths (distinguishing those of infants under one year of age) and numbers of notified cases of and deaths from certain diseases in each of the preceding thirteen weeks and in the current year to date with corresponding figures for previous year.

TABLE 6 is a Report of the meteorological conditions in certain towns for the week as a whole.

TABLE 7 is a Report of the meteorological observations taken at Greenwich on each day of the week.

WEEKLY SUMMARY OF INFECTIOUS DISEASES (TABLE 4).

1. TABLE 4 is a weekly Summary of notified cases of certain specified infectious diseases in England and Wales and is based upon weekly returns received from the Medical Officers of Health of all Local Sanitary Authorities, including Port Sanitary Authorities. The figures are now included in the present publication by arrangement with the Ministry of Health in pursuance of Section 5 of the Census Act, 1920.

2. The arrangement of this Table is as follows:—

Particulars for London are contained in Part I. Part II. contains particulars for sanitary districts, outside London, arranged under county headings; the counties being entered in alphabetical order. Particulars for Port Sanitary Districts are given in Part III.

Under each county, the names of (a) the Boroughs and Urban Districts and (b) the Rural Districts, are entered in alphabetical order.

The names of Boroughs and Urban Districts with populations of over 10,000 according to the last Census, are marked with a †.

County Boroughs are marked "C.B."

3. The names of districts in respect of which "Nil" returns have been received indicating that no cases of the specified infectious diseases have been notified during the week, are omitted from this Summary.

4. The infectious diseases comprised in this Summary include the more important infectious diseases which are notifiable under the general law, and also cerebro-spinal fever, acute poliomyelitis, plague, acute poliomyelitis, encephalitis lethargica, pneumonia, dysentery, ophthalmia neonatorum, and puerperal pyrexia, which are notifiable either under the general law or under Orders which were made by the Local Government Board or Minister of Health.

The first five columns of the Summary relate to diseases specified in the headings to the columns: the heading "Diphtheria" includes Membranous Croup, the heading "Enteric Fever" includes Typhoid and Paratyphoid. The sixth column is intended to contain a figure (or figures) relating to one or more of the undermentioned diseases. In order to show to what disease any such figure relates, one of the following symbols is employed viz.:—A, Cholera; B, Plague; C, Puerperal Fever; D, Cerebro-Spinal Fever; E, Acute Poliomyelitis; F, Acute Polio-encephalitis; G, Encephalitis Lethargica; H, Typhus Fever; I, Relapsing Fever; J, Continued Fever; L, Dysentery; M, Ophthalmia Neonatorum; N, Puerperal Pyrexia. Cases of Plague (if any) are mentioned specially in footnotes.

5. Quarterly and annual summaries of the information, adjusted in respect of any returns or corrections received too late for the weekly issues, will be published in due course.

NOTES FOR THE WEEK ENDED 3RD MARCH, 1928.

BIRTHS AND DEATHS.

In the 107 County Boroughs and Great Towns of England and Wales the live births registered in the ninth week of the year numbered 6,839 corresponding to an annual rate of 18·2 per 1,000 living: stillbirths numbered 279 corresponding to a rate of 39 per 1,000 total births (including stillborn): the civilian deaths (excluding stillbirths) corrected as far as possible for non-residents numbered 5,166 (211 more than the number in the preceding week).

The annual death-rate in the Aggregate and in the largest of the County Boroughs and Great Towns in each of the last four weeks was as follows:—

—	Feb. 11*.	Feb. 18.	Feb. 25.	Mar. 3.
107 Great Towns	13·2	13·4	13·2	13·8
London	13·2	12·9	12·9	14·8
Birmingham	12·0	12·0	11·3	10·6
Liverpool	17·7	17·8	14·9	15·0
Manchester	14·8	15·5	12·8	13·5
Sheffield	12·4	11·8	14·0	14·2
Leeds	12·4	15·8	15·1	15·0
Bristol	13·9	15·3	14·2	15·7
West Ham	12·4	12·7	14·4	11·4

Infant mortality, based on the average weekly number of live births during the last 52 weeks, was 99 against 85, 86 and 86 in the preceding three weeks: during the last four weeks deaths from influenza numbered 111, 83, 98 and 93 respectively, and from measles 78, 89, 117, and 167 respectively.

In London (Administrative County including the City of London) there were 1,613 live births corresponding to an annual rate of 18·5 per 1,000 living: stillbirths numbered 50 corresponding to a rate of 30 per 1,000 total births (including stillborn): the civilian deaths (excluding stillbirths) numbered 1,287 (161 more than the number in the preceding week): infant mortality based on the average weekly number of live births during the last 52 weeks was 107 against 61, 73 and 71 in the three weeks preceding: during the last four weeks deaths from influenza numbered 24, 5, 20, and 21 respectively and from measles 45, 44, 66 and 89 respectively.

During the week small-pox was mentioned as a cause of death in one case and in another case in the previous week, received too late for inclusion in the return. Both these cases have been provisionally classified to small-pox and assigned to South Shields C.B.

* The rates for this week, having been revised on populations estimated to the middle of 1927, differ in some cases from those previously shown in this Table.

* Population adjusted by the exclusion of non-civilians.

† The populations relate to 1928 except that of Belfast which is the Preliminary Census figure of 1926. Yearly estimates having been discontinued. Deaths in Edinburgh and Glasgow are provisionally corrected by the deduction of deaths of non-residents domiciled in Scotland and by the addition of deaths of residents reported from elsewhere in Scotland during the week: these in Dublin Registration Area and Belfast are corrected by the exclusion of deaths of persons admitted into public institutions from without the respective areas.

‡ Including one death from Small-pox.

The results apply to the Civil Day or from midnight to midnight.

The height of the cistern of the barometer is 152 feet above the mean level of the sea. no correction has been applied to the readings to reduce to sea level.

Observations are usually taken at 9h. A.M., noon, 3h. P.M., and 9h. P.M. The means of the eye-readings of the barometer, the dry bulb thermometer, and the wet bulb thermometer are converted into mean daily values by the application of corrections deduced from a discussion of the photographic records made during the 50 years ending 1903. With the corrected mean reading of the dry bulb thermometer is combined the corrected mean of the readings of the maximum and minimum thermometers, forming the mean daily value of the temperature of the air (column 8). The mean daily dew point temperature and degree of humidity are deduced from the mean daily values of the dry and wet bulb thermometers by Hygrometric Tables, issued by the Air Ministry.

The average temperature of the air is that derived from a discussion of the observations made at Greenwich during the 65 years ending 1905, and that of horizontal movement of the air from a discussion of the anemometric records for the 50 years ending 1899.

In reading columns 9 and 24 it will be borne in mind that + indicates "higher," and - "lower" than the average.

The values given in column 17 are not corrected for the index error of the thermometer, which cannot be determined.

The record of Electricity is derived from Thomson's self-registering Electrometer. The symbols employed are: -P. positive; N. negative: w. weak; m. moderate; s. strong; v. variable.

The numbers in column 27, derived from the Campbell Stokes Sunshine Instrument show the aggregate duration of bright sunshine each day.

The reading of the barometer decreased from 30.18 ins. at the beginning of the week to 29.67 ins. by 16h. on February 28th; increased and was 29.92 ins. by midnight on March 3rd.

EXPLANATORY STATEMENT.

TABLE 1 shows, for the several towns, the births and deaths (distinguishing deaths from certain causes and those of infants under one year of age) for the week ended last Saturday.

TABLE 2 shows the births and deaths (distinguishing certain causes) and death rates in London and in certain cities in the British Empire and in foreign countries.

TABLE 3 shows the deaths in London at ages and by causes of death and by cause in the current year to date with corresponding figures for previous year.

TABLE 4 is a summary of returns of notified cases of certain Infectious Diseases (*vide infra*).

TABLE 5 shows for (a) London and (b) the Great Towns in the aggregate the births, deaths (distinguishing those of infants under one year of age) and numbers of notified cases of and deaths from certain diseases in each of the preceding thirteen weeks and in the current year to date with corresponding figures for previous year.

TABLE 6 is a Report of the meteorological conditions in certain towns for the week as a whole.

TABLE 7 is a Report of the meteorological observations taken at Greenwich on each day of the week.

WEEKLY SUMMARY OF INFECTIOUS DISEASES (TABLE 4).

1. TABLE 4 is a weekly Summary of notified cases of certain specified infectious diseases in England and Wales and is based upon weekly returns received from the Medical Officers of Health of all Local Sanitary Authorities, including Port Sanitary Authorities. The figures are now included in the present publication by arrangement with the Ministry of Health in pursuance of Section 5 of the Census Act, 1920.

2. The arrangement of this Table is as follows:—

Particulars for London are contained in Part I. Part II. contains particulars for sanitary districts, outside London, arranged under county headings; the counties being entered in alphabetical order. Particulars for Port Sanitary Districts are given in Part III.

Under each county, the names of (a) the Boroughs and Urban Districts and (b) the Rural Districts, are entered in alphabetical order.

The names of Boroughs and Urban Districts with populations of over 10,000 according to the last Census, are marked with a †.

County Boroughs are marked "C.B."

3. The names of districts in respect of which "Nil" returns have been received indicating that no cases of the specified infectious diseases have been notified during the week, are omitted from this Summary.

4. The infectious diseases comprised in this Summary include the more important infectious diseases which are notifiable under the general law, and also cerebro-spinal fever, acute poliomyelitis, plague, acute poli-encephalitis, encephalitis lethargica, pneumonia, dysentery, ophthalmia neonatorum, and puerperal pyrexia, which are notifiable either under the general law or under Orders which were made by the Local Government Board or Minister of Health.

The first five columns of the Summary relate to diseases specified in the headings to the columns: the heading "Diphtheria" includes Membranous Croup, the heading "Enteric Fever" includes Typhoid and Paratyphoid. The sixth column is intended to contain a figure (or figures) relating to one or more of the undermentioned diseases. In order to show to what disease any such figure relates, one of the following symbols is employed viz.:—A, Cholera; B, Plague; C, Puerperal Fever; D, Cerebro-Spinal Fever; E, Acute Poliomyelitis; F, Acute Polio-encephalitis; G, Encephalitis Lethargica; H, Typhus Fever; I, Relapsing Fever; J, Continued Fever; L, Dysentery; M, Ophthalmia Neonatorum; N, Puerperal Pyrexia. Cases of Plague (if any) are mentioned specially in footnotes.

5. Quarterly and annual summaries of the information, adjusted in respect of any returns or corrections received too late for the weekly issues, will be published in due course.

NOTES FOR THE WEEK ENDED 10TH MARCH, 1928.

BIRTHS AND DEATHS.

In the 107 County Boroughs and Great Towns of England and Wales the live births registered in the tenth week of the year numbered 6,578 corresponding to an annual rate of 17·5 per 1,000 living: stillbirths numbered 297 corresponding to a rate of 43 per 1,000 total births (including stillborn): the civilian deaths (excluding stillbirths) corrected as far as possible for non-residents numbered 5,080 (86 less than the number in the preceding week).

The annual death-rate in the Aggregate and in the largest of the County Boroughs and Great Towns in each of the last four weeks was as follows:—

—	Feb. 18.	Feb. 25.	Mar. 3.	Mar. 10.
107 Great Towns	13·4	13·2	13·8	13·5
London	12·9	12·9	14·8	14·5
Birmingham	12·0	11·3	10·6	12·1
Liverpool	17·8	14·9	15·0	14·0
Manchester	15·5	12·8	13·3	14·8
Sheffield	11·8	14·0	14·2	13·4
Leeds	15·8	15·1	15·0	12·8
Bristol	15·3	14·2	15·7	11·9
West Ham	12·7	14·4	11·4	13·1

Infant mortality, based on the average weekly number of live births during the last 52 weeks, was 84 against 86, 86 and 99 in the preceding three weeks: during the last four weeks deaths from influenza numbered 83, 98, 93 and 109 respectively, and from measles 89, 117, 167, and 141 respectively.

In London (Administrative County including the City of London) there were 1,415 live births corresponding to an annual rate of 16·2 per 1,000 living: stillbirths numbered 50 corresponding to a rate of 34 per 1,000 total births (including stillborn): the civilian deaths (excluding stillbirths) numbered 1,263 (25 less than the number in the preceding week): infant mortality based on the average weekly number of live births during the last 52 weeks was 109 against 73, 71 and 107 in the three weeks preceding: during the last four weeks deaths from influenza numbered 5, 20, 21, and 23 respectively and from measles 44, 66, 89 and 77 respectively.

During the week small-pox was mentioned as a cause of death in two cases. These cases have been provisionally classified to small-pox and assigned to Rotherham C.B. and South Shields C.B.

* Population adjusted by the exclusion of non-civilians

† The populations relate to 1928 except that of Belfast which is the Preliminary Census figure of 1926 yearly estimates having been discontinued. Deaths in Edinburgh and Glasgow are provisionally corrected by the deduction of deaths of non-residents domiciled in Scotland and by the addition of deaths of residents reported from elsewhere in Scotland during the week; those in Dublin Registration Area and Belfast are corrected by the exclusion of deaths of persons admitted into public institutions from without the respective areas.

‡ Including one death from Small-pox.

‡ 1 millimetre = .04 inch nearly; 1 inch = 25.4 millimetres exactly.

§ Return not received.

The results apply to the Civil Day or from midnight to midnight. The height of the cistern of the barometer is 152 feet above the mean level of the sea no correction has been applied to the readings to reduce to sea level. Observations are usually taken at 9h. A.M., noon, 3h. P.M., and 9h. P.M. The means of the eye-readings of the barometer, the dry bulb thermometer, and the wet bulb thermometer are converted into mean daily values by the application of corrections deduced from a discussion of the photographic records made during the 50 years ending 1903. With the corrected mean reading of the dry bulb thermometer is combined the corrected mean of the readings of the maximum and minimum thermometers, forming the mean daily value of the temperature of the air (column 8). The mean daily dew point temperature and degree of humidity are deduced from the mean daily values of the dry and wet bulb thermometers by Hygrometric Tables, issued by the Air Ministry.

The average temperature of the air is that derived from a discussion of the observations made at Greenwich during the 65 years ending 1903, and that of horizontal movement of the air from a discussion of the anemometric records for the 50 years ending 1913.

In reading columns 9 and 24 it will be borne in mind that + indicates "higher," and - "lower" than the average.

The values given in column 17 are not corrected for the index error of the thermometer, which cannot be determined.

The record of Electricity is derived from Thomson's self-registering Electrometer. The symbols employed are: - P. positive; N. negative; w. weak; m. moderate; s. strong; v. variable.

The numbers in column 27, derived from the Campbell Stokes Sunshine Instrument show the aggregate duration of bright sunshine each day.

The reading of the barometer increased from 29.92 ins. at the beginning of the week to 29.96 ins. by 23h. on 4th; decreased to 29.77 ins. by 5h. on 6th; increased generally to 29.89 ins. by 21h. on 10th; decreased and was 29.88 ins. by midnight on the same day.

EXPLANATORY STATEMENT.

TABLE 1 shows, for the several towns, the births and deaths (distinguishing deaths from certain causes and those of infants under one year of age) for the week ended last Saturday.

TABLE 2 shows the births and deaths (distinguishing certain causes) and death rates in London and in certain cities in the British Empire and in foreign countries.

TABLE 3 shows the deaths in London at ages and by causes of death and by cause in the current year to date with corresponding figures for previous year.

TABLE 4 is a summary of returns of notified cases of certain Infectious Diseases (*vide infra*).

TABLE 5 shows for (a) London and (b) the Great Towns in the aggregate the births, deaths (distinguishing those of infants under one year of age) and numbers of notified cases of and deaths from certain diseases in each of the preceding thirteen weeks and in the current year to date with corresponding figures for previous year.

TABLE 6 is a Report of the meteorological conditions in certain towns for the week as a whole.

TABLE 7 is a Report of the meteorological observations taken at Greenwich on each day of the week.

WEEKLY SUMMARY OF INFECTIOUS DISEASES (TABLE 4).

1. TABLE 4 is a weekly Summary of notified cases of certain specified infectious diseases in England and Wales and is based upon weekly returns received from the Medical Officers of Health of all Local Sanitary Authorities, including Port Sanitary Authorities. The figures are now included in the present publication by arrangement with the Ministry of Health in pursuance of Section 5 of the Census Act, 1920.

2. The arrangement of this Table is as follows:—

Particulars for London are contained in Part I. Part II. contains particulars for sanitary districts, outside London, arranged under county headings; the counties being entered in alphabetical order. Particulars for Port Sanitary Districts are given in Part III.

Under each county, the names of (a) the Boroughs and Urban Districts and (b) the Rural Districts, are entered in alphabetical order.

The names of Boroughs and Urban Districts with populations of over 10,000 according to the last Census, are marked with a †.

County Boroughs are marked "C.B."

3. The names of districts in respect of which "Nil" returns have been received indicating that no cases of the specified infectious diseases have been notified during the week, are omitted from this Summary.

4. The infectious diseases comprised in this Summary include the more important infectious diseases which are notifiable under the general law, and also cerebro-spinal fever, acute poliomyelitis, plague, acute poli-encephalitis, encephalitis lethargica, pneumonia, dysentery, ophthalmia neonatorum, and puerperal pyrexia, which are notifiable either under the general law or under Orders which were made by the Local Government Board or Minister of Health.

The first five columns of the Summary relate to diseases specified in the headings to the columns: the heading "Diphtheria" includes Membranous Croup, the heading "Enteric Fever" includes Typhoid and Paratyphoid. The sixth column is intended to contain a figure (or figures) relating to one or more of the undermentioned diseases. In order to show to what disease any such figure relates, one of the following symbols is employed viz.:—A, Cholera; B, Plague; C, Puerperal Fever; D, Cerebro-Spinal Fever; E, Acute Poliomyelitis; F, Acute Polio-encephalitis; G, Encephalitis Lethargica; H, Typhus Fever; I, Relapsing Fever; J, Continued Fever; L, Dysentery; M, Ophthalmia Neonatorum; N, Puerperal Pyrexia. Cases of Plague (if any) are mentioned specially in footnotes.

5. Quarterly and annual summaries of the information, adjusted in respect of any returns or corrections received too late for the weekly issues, will be published in due course.

NOTES FOR THE WEEK ENDED 17TH MARCH, 1928.

BIRTHS AND DEATHS.

In the 107 County Boroughs and Great Towns of England and Wales the live births registered in the eleventh week of the year numbered 6,427 corresponding to an annual rate of 17·1 per 1,000 living: stillbirths numbered 301 corresponding to a rate of 45 per 1,000 total births (including stillborn): the civilian deaths (excluding stillbirths) corrected as far as possible for non-residents numbered 5,405 (325 more than the number in the preceding week).

The annual death-rate in the Aggregate and in the largest of the County Boroughs and Great Towns in each of the last four weeks was as follows:—

—	Feb. 25.	Mar. 3.	Mar. 10.	Mar. 17.
107 Great Towns	13·2	13·8	13·5	14·4
London	12·9	14·8	14·5	15·0
Birmingham	11·3	10·6	12·1	13·0
Liverpool	14·9	15·0	14·0	15·3
Manchester	12·8	13·3	14·8	15·8
Sheffield	14·0	14·2	13·4	13·2
Leeds	15·1	15·0	12·8	13·9
Bristol	14·2	15·7	11·9	15·1
West Ham	14·4	11·4	13·1	11·9

Infant mortality, based on the average weekly number of live births during the last 52 weeks, was 94 against 86, 99 and 84 in the preceding three weeks: during the last four weeks deaths from influenza numbered 98, 93, 109, and 100 respectively, and from measles 117, 167, 141, and 172 respectively.

In London (Administrative County including the City of London) there were 1,461 live births corresponding to an annual rate of 16·8 per 1,000 living: stillbirths numbered 61 corresponding to a rate of 40 per 1,000 total births (including stillborn): the civilian deaths (excluding stillbirths) numbered 1,304 (41 more than the number in the preceding week): infant mortality based on the average weekly number of live births during the last 52 weeks was 94 against 71, 107, and 109 in the three weeks preceding: during the last four weeks deaths from influenza numbered 20, 21, 23, and 15 respectively and from measles 66, 89, 77, and 97 respectively.

Corrigendum.

Week ended 10th March, 1927, page 317, Table 5, last column:—
Total number of deaths from Small-pox from the 1st week of year, for 1 read 11.

* Population adjusted by the exclusion of non-civilians

† The populations relate to 1928 except that of Belfast which is the Preliminary Census figure of 1926
early estimates having been discontinued. Deaths in Edinburgh and Glasgow are provisionally
rected by the deduction of deaths of non-residents domiciled in Scotland and by the addition of
aths of residents reported from elsewhere in Scotland during the week; those in Dublin Registration
ea and Belfast are corrected by the exclusion of deaths of persons admitted into public institutions
m without the respective areas.

\$ Return not received.

Table 2.—LONDON and certain CITIES in the } BIRTHS and DEATHS for last available period
BRITISH EMPIRE and FOREIGN COUNTRIES.

CITIES;	POPULA- TION (enu- merated or es- timated).	DATE OF RETURN. Week ended	LIVE BIRTHS.	STILLBIRTHS.	DEATHS (excluding Stillbirths).	ANNUAL DEATH- RATE per 1,000 living.	DEATHS FROM

DATE.	ELECTRICITY. (For explanation of symbols, see Note.)	Registered Sunshine in hours.	Sun above Horizon in hours.	GENERAL REMARKS.	
MARCH.					
SUNDAY .. 11	wP till 2h.; then variably mP and sN.	0·4	11·5	Partially cloudy till 4h.; then over- cast. Snow 11½h. till 15h.; 2½h. till 21½h.; and at 23h.	<p>The results apply to the Civil Day or from midnight to midnight. The height of the cistern of the barometer is 152 feet above the mean level of the sea no correction has been applied to the readings to reduce to sea level. Observations are usually taken at 9h. A.M., noon, 3h. P.M., and 9h. P.M. The means of the eye-readings of the barometer, the dry bulb thermometer, and the wet bulb thermometer are converted into mean daily values by the application of corrections deduced from a discussion of the photographic records made during the 50 years ending 1903. With the corrected mean reading of the dry bulb thermometer is combined the corrected mean of the readings of the maximum and minimum thermometers, forming the mean daily value of the temperature of the air (column 8). The mean daily dew point temperature and degree of humidity are deduced from the mean daily values of the dry and wet bulb thermometers by Hygrometric Tables, issued by the Air Ministry. The average temperature of the air is that derived from a discussion of the observa- tions made at Greenwich during the 65 years ending 1903, and that of horizontal movement of the air from a discussion of the anemometric records for the 50 years ending 1903. In reading columns 9 and 24 it will be borne in mind that + indicates "higher," and - "lower," than the average. The values given in column 17 are not corrected for the index error of the thermo- meter which cannot be determined. The record of Electricity is derived from Thomson's self-registering Electrometer The symbols employed are: -P. positive; N. negative; w. weak; m. moderate; s. strong; v. variable. The numbers in column 27, derived from the Campbell Stokes Sunshine Instrument show the aggregate duration of bright sunshine each day. The reading of the barometer decreased from 29·88 ins. at the beginning of the week to 29·73 ins. by 8h. on 12th; increased generally to 30·17 ins. by 9h. on 16th; decreased and was 29·76 ins. by midnight on the 17th.</p>
MONDAY .. 12	Variably sN and mP till 1½h.; wP till 14½h. Variably sN and mP till 16h.; then wP.	6·8	11·6	Variably cloudy becoming overcast by 13h. Snow 14½h. till 15h.	
TUESDAY .. 13	Variably wP and mP till 6h.; loss of register till 1½h.; mP till 17h.; then wP.	1·0	11·6	Overcast, with break at 10½h. till 11h. Snow 1½h.; and about 4h. Partial solar halo 12½h. Slight gloom 15½h. till 16h.	
WEDNESDAY 14	wP	0·1	11·7	Overcast. Mist 8h. till 13½h. 10½h. till 11½h.; and 12½h. till 13½h.	
THURSDAY 15	wP	1·0	11·8	Overcast till 15h.; then clearing to cloudless by 2½h. Partial solar halo 14h. Hear frost at night.	
FRIDAY .. 16	wP	8·7	11·8	Cloudless till 12h.; then very cloudy. Fog 4½h. till 5h. Hear frost in morning.	
SATURDAY 17	wP	6·4	11·9	Variably cloudy. Solar halo 13h. till 14h.

DURING THE WEEK ENDED

**SATURDAY, 24TH MARCH,
1928**

LONDON:

PRINTED AND PUBLISHED BY HIS MAJESTY'S STATIONERY OFFICE.

To be purchased directly from H.M. STATIONERY OFFICE at the following addresses:

Adastral House, Kingsway, London, W.C.2; 120, George Street, Edinburgh;

York Street, Manchester; 1, St. Andrew's Crescent, Cardiff;

15, Donegall Square West, Belfast;

or through any Bookseller.

1928.

Price 6d. net.

EXPLANATORY STATEMENT.

TABLE 1 shows, for the several towns, the births and deaths (distinguishing deaths from certain causes and those of infants under one year of age) for the week ended last Saturday.

TABLE 2 shows the births and deaths (distinguishing certain causes) and death rates in London and in certain cities in the British Empire and in foreign countries.

TABLE 3 shows the deaths in London at ages and by causes of death and by cause in the current year to date with corresponding figures for previous year.

TABLE 4 is a summary of returns of notified cases of certain Infectious Diseases (*vide infra*).

TABLE 5 shows for (a) London and (b) the Great Towns in the aggregate the births, deaths (distinguishing those of infants under one year of age) and numbers of notified cases of and deaths from certain diseases in each of the preceding thirteen weeks and in the current year to date with corresponding figures for previous year.

TABLE 6 is a Report of the meteorological conditions in certain towns for the week as a whole.

TABLE 7 is a Report of the meteorological observations taken at Greenwich on each day of the week.

WEEKLY SUMMARY OF INFECTIOUS DISEASES (TABLE 4).

1. TABLE 4 is a weekly Summary of notified cases of certain specified infectious diseases in England and Wales and is based upon weekly returns received from the Medical Officers of Health of all Local Sanitary Authorities, including Port Sanitary Authorities. The figures are now included in the present publication by arrangement with the Ministry of Health in pursuance of Section 5 of the Census Act, 1920.

2. The arrangement of this Table is as follows:—

Particulars for London are contained in Part I. Part II. contains particulars for sanitary districts, outside London, arranged under county headings; the counties being entered in alphabetical order. Particulars for Port Sanitary Districts are given in Part III.

Under each county, the names of (a) the Boroughs and Urban Districts and (b) the Rural Districts, are entered in alphabetical order.

The names of Boroughs and Urban Districts with populations of over 10,000 according to the last Census, are marked with a †.

County Boroughs are marked "C.B."

3. The names of districts in respect of which "Nil" returns have been received indicating that no cases of the specified infectious diseases have been notified during the week, are omitted from this Summary.

4. The infectious diseases comprised in this Summary include the more important infectious diseases which are notifiable under the general law, and also cerebro-spinal fever, acute poliomyelitis, plague, acute poliomyelitis, encephalitis lethargica, pneumonia, dysentery, ophthalmia neonatorum, and puerperal pyrexia, which are notifiable either under the general law or under Orders which were made by the Local Government Board or Minister of Health.

The first five columns of the Summary relate to diseases specified in the headings to the columns: the heading "Diphtheria" includes Membranous Croup, the heading "Enteric Fever" includes Typhoid and Paratyphoid. The sixth column is intended to contain a figure (or figures) relating to one or more of the undermentioned diseases. In order to show to what disease any such figure relates, one of the following symbols is employed viz.:—A, Cholera; B, Plague; C, Puerperal Fever; D, Cerebro-Spinal Fever; E, Acute Poliomyelitis; F, Acute Poliomyelitis; G, Encephalitis Lethargica; H, Typhus Fever; I, Relapsing Fever; J, Continued Fever; L, Dysentery; M, Ophthalmia Neonatorum; N, Puerperal Pyrexia. Cases of Plague (if any) are mentioned specially in footnotes.

5. Quarterly and annual summaries of the information, adjusted in respect of any returns or corrections received too late for the weekly issues, will be published in due course.

NOTES FOR THE WEEK ENDED 24TH MARCH, 1923.

BIRTHS AND DEATHS.

In the 107 County Boroughs and Great Towns of England and Wales the live births registered in the twelfth week of the year numbered 6,716 corresponding to an annual rate of 17·9 per 1,000 living: stillbirths numbered 276 corresponding to a rate of 39 per 1,000 total births (including stillborn): the civilian deaths (excluding stillbirths) corrected as far as possible for non-residents numbered 5,570 (168 more than the number in the preceding week).

The annual death-rate in the Aggregate and in the largest of the County Boroughs and Great Towns in each of the last four weeks was as follows:—

—				Mar. 3.	Mar. 10.	Mar. 17.	Mar. 24.
107 Great Towns	13·8	13·5	14·4	14·8
London	14·8	14·5	15·0	15·6
Birmingham	10·6	12·1	13·0	13·0
Liverpool	15·0	14·0	15·1	15·0
Manchester	13·3	14·8	15·8	15·6
Sheffield	14·2	13·4	13·2	16·5
Leeds	15·0	12·8	13·9	14·7
Bristol	15·7	11·9	15·1	14·9
West Ham	11·4	13·1	11·9	13·4

Infant mortality, based on the average weekly number of live births during the last 52 weeks, was 89 against 99, 84 and 94 in the preceding three weeks: during the last four weeks deaths from influenza numbered 93, 109, 100, and 135 respectively, and from measles 167, 141, 172, and 166 respectively.

In London (Administrative County including the City of London) there were 1,581 live births corresponding to an annual rate of 18·2 per 1,000 living: stillbirths numbered 55 corresponding to a rate of 34 per 1,000 total births (including stillborn): the civilian deaths (excluding stillbirths) numbered 1,361 (57 more than the number in the preceding week): infant mortality based on the average weekly number of live births during the last 52 weeks was 99 against 107, 109, and 94 in the three weeks preceding: during the last four weeks deaths from influenza numbered 21, 23, 15, and 19 respectively and from measles 89, 77, 97, and 99 respectively.

During the week Small-pox was mentioned as a cause of death in two cases. These cases have been provisionally classified to Small-pox and assigned to South Shields C.B. and Aberdare.

* Population adjusted by the exclusion of non-civilians

† The populations relate to 1928 except that of Belfast which is the Census figure of 1926 yearly estimates having been discontinued. Deaths in Edinburgh and Glasgow are provisionally corrected by the deduction of deaths of non-residents domiciled in Scotland and by the addition of deaths of residents reported from elsewhere in Scotland during the week: those in Dublin Registration Area and Belfast are corrected by the exclusion of deaths of persons admitted into public institutions from without the respective areas.

‡ Including one death from Small-pox.

§ Return not received.

MONDAY ..	19 ..	WP	0 6	12 0	Overcast generally till 20½h.; then partially cloudy. Damping about 2½h. Shower at 5½h.
TUESDAY ..	20 ..	WP	8 1	12 1	Nearly overcast till 9h.; cloudy till 1½h.; then overcast. Brisk wind 10h. till 17h.
WEDNESDAY	21	Variably wP; and wN till 20h.; then wP.	0 0	12 2	Overcast throughout. Showers 1½h.; 3h.; and 6½h. Damping 12h. till 15½h. Rain 16½h. till 21h. Solar halo 9h. till 9½h.
THURSDAY	22	WP	3 6	12 2	Nearly overcast till 15h.; partially cloudy till 21h.; then overcast. Shower 8½h.; and occasional showers between 11½h. and 12h.
FRIDAY ..	23 ..	sN till 9½h.; vari- ably wP and wN till 8h.; then wP.	1 4	12 3	Nearly overcast till 17½h.; variably cloudy till 20h.; then cloudless. Frequent damping between 9h. and 9½h.; and be- tween 10½h. and 14h. Rain 6h. till 6h.
SATURDAY	24	wP till 1½h.; vari- ably sN and sP till 16h.; then wP.	1 0	12 4	Cloudless till 1h.; nearly overcast till 16½h.; then nearly cloudless. Occasional slight damping 8h. till 12h. Rain 13h. till 16½h. Hear frost at night.
No. of Col. . .		26	Sum 19 4	Sum 85 2	28

The results apply to the Civil Day or from midnight to midnight.
The height of the cistern of the barometer is 132 feet above the mean level of the sea.
Observations have been applied to the readings to reduce to sea level.
The eye-readings of the barometer, the dry bulb thermometer, and the wet bulb thermometer are converted into mean daily values by the application of corrections deduced from a discussion of the photographic records made during the 50 years ending 1863. With the corrected mean reading of the dry bulb thermometer is combined the corrected mean of the readings of the maximum and minimum thermometers, forming the mean daily value of the temperature of the air (column 8). The mean daily dew point temperature and degree of humidity are deduced from the mean daily values of the dry and wet bulb thermometers by Hygrometric Tables, issued by the Air Ministry.
The average temperature of the air is that derived from a discussion of the observations made at Greenwich during the 65 years ending 1906, and that of horizontal movement of the air from a discussion of the anemometric records for the 50 years ending 1898.
In reading columns 9 and 24 it will be borne in mind that + indicates "higher," and - "lower" than the average.
The values given in column 17 are not corrected for the index error of the thermometer, which cannot be determined.
The record of Electricity is derived from Thomson's self-registering Electrometer. The symbols employed are: -P. positive; N. negative; w. weak; m. moderate; s. strong; v. variable.
The numbers in column 27, derived from the Campbell Stokes Sunshine Instrument show the aggregate duration of bright sunshine each day.
The reading of the barometer decreased from 29.76 ins. at the beginning of the week to 29.69 ins. by 3h. on 18th; increased to 29.82 ins. by 20h. on 18th; decreased to 29.15 ins. by 22h. on 21st; increased to 29.24 ins. by 12h. on 22nd; decreased to 29.08 ins. by 8h. on 23rd; increased generally and was 29.19 ins. by midnight on the 24th.

1928. No. 13.

THE
REGISTRAR-GENERAL'S

WEEKLY RETURN OF
BIRTHS AND DEATHS

REGISTERED IN COUNTY BOROUGH
AND OTHER GREAT TOWNS AND
OF CASES OF CERTAIN SPECIFIED

INFECTIOUS DISEASES

NOTIFIED IN BOROUGH, URBAN &
RURAL DISTRICTS & PORT SANITARY
DISTRICTS IN ENGLAND AND WALES
DURING THE WEEK ENDED

**SATURDAY, 31ST MARCH,
1928**

LONDON:

PRINTED AND PUBLISHED BY HIS MAJESTY'S STATIONERY OFFICE.

To be purchased directly from H.M. STATIONERY OFFICE at the following addresses:

Adastral House, Kingsway, London, W.C.2; 120, George Street, Edinburgh;

York Street, Manchester; 1, St. Andrew's Crescent, Cardiff;

15, Donegall Square West, Belfast;

or through any Bookseller.

1928.

Price 6d. net.

EXPLANATORY STATEMENT.

TABLE 1 shows, for the several towns, the births and deaths (distinguishing deaths from certain causes and those of infants under one year of age) for the week ended last Saturday.

TABLE 2 shows the births and deaths (distinguishing certain causes) and death rates in London and in certain cities in the British Empire and in foreign countries.

TABLE 3 shows the deaths in London at ages and by causes of death and by cause in the current year to date with corresponding figures for previous year.

TABLE 4 is a summary of returns of notified cases of certain Infectious Diseases (*vide infra*).

TABLE 5 shows for (a) London and (b) the Great Towns in the aggregate the births, deaths (distinguishing those of infants under one year of age) and numbers of notified cases of and deaths from certain diseases in each of the preceding thirteen weeks and in the current year to date with corresponding figures for previous year.

TABLE 6 is a Report of the meteorological conditions in certain towns for the week as a whole.

TABLE 7 is a Report of the meteorological observations taken at Greenwich on each day of the week.

WEEKLY SUMMARY OF INFECTIOUS DISEASES (TABLE 4).

1. TABLE 4 is a weekly Summary of notified cases of certain specified infectious diseases in England and Wales and is based upon weekly returns received from the Medical Officers of Health of all Local Sanitary Authorities, including Port Sanitary Authorities. The figures are now included in the present publication by arrangement with the Ministry of Health in pursuance of Section 5 of the Census Act, 1920.

2. The arrangement of this Table is as follows:—

Particulars for London are contained in Part I. Part II. contains particulars for sanitary districts, outside London, arranged under county headings; the counties being entered in alphabetical order. Particulars for Port Sanitary Districts are given in Part III.

Under each county, the names of (a) the Boroughs and Urban Districts and (b) the Rural Districts, are entered in alphabetical order.

The names of Boroughs and Urban Districts with populations of over 10,000 according to the last Census, are marked with a †.

County Boroughs are marked "C.B."

3. The names of districts in respect of which "Nil" returns have been received indicating that no cases of the specified infectious diseases have been notified during the week, are omitted from this Summary.

4. The infectious diseases comprised in this Summary include the more important infectious diseases which are notifiable under the general law, and also cerebro-spinal fever, acute poliomyelitis, plague, acute poli-encephalitis, encephalitis lethargica, pneumonia, dysentery, ophthalmia neonatorum, and puerperal pyrexia, which are notifiable either under the general law or under Orders which were made by the Local Government Board or Minister of Health.

The first five columns of the Summary relate to diseases specified in the headings to the columns: the heading "Diphtheria" includes Membranous Croup, the heading "Enteric Fever" includes Typhoid and Paratyphoid. The sixth column is intended to contain a figure (or figures) relating to one or more of the undermentioned diseases. In order to show to what disease any such figure relates, one of the following symbols is employed viz.:—A, Cholera; B, Plague; C, Puerperal Fever; D, Cerebro-Spinal Fever; E, Acute Poliomyelitis; F, Acute Polio-encephalitis; G, Encephalitis Lethargica; H, Typhus Fever; I, Relapsing Fever; J, Continued Fever; L, Dysentery; M, Ophthalmia Neonatorum; N, Puerperal Pyrexia. Cases of Plague (if any) are mentioned specially in footnotes.

5. Quarterly and annual summaries of the information, adjusted in respect of any returns or corrections received too late for the weekly issues, will be published in due course.

NOTES FOR THE WEEK ENDED 31ST MARCH, 1923.

BIRTHS AND DEATHS.

In the 107 County Boroughs and Great Towns of England and Wales the live births registered in the thirteenth week of the year numbered 6,541 corresponding to an annual rate of 17·4 per 1,000 living: stillbirths numbered 309 corresponding to a rate of 45 per 1,000 total births (including stillborn): the civilian deaths (excluding stillbirths) corrected as far as possible for non-residents numbered 5,074 (496 less than the number in the preceding week).

The annual death-rate in the Aggregate and in the largest of the County Boroughs and Great Towns in each of the last four weeks was as follows:—

—	Mar. 10.	Mar. 17.	Mar. 24.	Mar. 31.
107 Great Towns	13·5	14·4	14·8	13·5
London	14·5	15·0	15·6	14·0
Birmingham	12·1	13·0	13·0	11·7
Liverpool	14·0	15·1	15·0	12·0
Manchester	14·8	15·8	15·6	15·0
Sheffield	13·4	13·2	16·5	15·1
Leeds	12·8	13·9	14·7	13·9
Bristol	11·9	15·1	14·9	12·2
West Ham	13·1	11·9	13·4	12·4

Infant mortality, based on the average weekly number of live births during the last 52 weeks, was 84 against 84, 94 and 89 in the preceding three weeks: during the last four weeks deaths from influenza numbered 109, 100, 135, and 135 respectively, and from measles 141, 172, 166, and 164 respectively.

In London (Administrative County including the City of London) there were 1,486 live births corresponding to an annual rate of 17·1 per 1,000 living: stillbirths numbered 59 corresponding to a rate of 38 per 1,000 total births (including stillborn): the civilian deaths (excluding stillbirths) numbered 1,223 (138 less than the number in the preceding week): infant mortality based on the average weekly number of live births during the last 52 weeks was 87 against 109, 94, and 99 in the three weeks preceding: during the last four weeks deaths from influenza numbered 23, 15, 19, and 18 respectively and from measles 77, 97, 99, and 88 respectively.

* Population adjusted by the exclusion of non-civilians

† The populations relate to 1928 except that of Belfast which is the Census figure of 1926 yearly estimates having been discontinued. Deaths in Edinburgh and Glasgow are provisionally rectified by the deduction of deaths of non-residents domiciled in Scotland and by the addition of deaths of residents reported from elsewhere in Scotland during the week; those in Dublin Registration Area and Belfast are corrected by the exclusion of deaths of persons admitted into public institutions without the respective areas.

MONDAY	26	wP till 7h.; mP till 12h.; then wP.	8.8	12.5	Variably cloudy. Rain 0.5h. till 1h.
TUESDAY	27	wP till 10.5h.; mP till 18h.; then wP.	0.1	12.6	Nearly cloudless till 3.5h.; partially cloudy till 6h.; then overcast. Hoar frost in morning. Frequent damping 12h. till 16h.
WEDNESDAY	28	wP till 10h.; mP till 14h.; variably sN and mP till 22h.; then wP.	2.6	12.6	Variably cloudy till 7h.; nearly over- cast till 15h.; then clearing to nearly cloudless by 1.5h. Hoar frost in morning. Slight rain 8h. till 9.5h., 12h. and 14.5h. Solar halo 16.5h. till 17h.
THURSDAY	29	wP till 8.5h.; wN till 12h.; then wP.	0.0	12.7	Partially cloudy, becoming overcast by 8h. Hoar frost in morning. Frequent slight rain between 9.5h. and 22h. Heavy rain 24.5h. till 25.5h. Brisk wind 9h. till 15h.
FRIDAY	30	wP till 12.5h.; vari- ably mP and mN till 7h.; then wP.	4.8	12.8	Variably cloudy till 7.5h.; nearly over- cast till 17h.; then variably cloudy. Brisk wind till 11h. Frequent rain between 7.5h. and 16.5h. Hail 16h. Thunder and light- ning between 15h. and 16h.
SATURDAY	31	Variably wP and wN till 13.5h.; sN till 16h.; then wP.	3.3	12.8	Variably cloudy till 9h.; then nearly overcast. Occasional rain between 0.5h. and 9.5h. Rain 14.5h. till 16h. Showers at 12.5h. and 14.5h.
No. of Col.	..	26	Sum 24.2	Sum 88.4	28

The results apply to the Civil Day or from midnight to midnight.

The height of the cistern of the barometer is 152 feet above the mean level of the sea; no correction has been applied to the readings to reduce to sea level.

Observations are usually taken at 9h. A.M., noon, 3h. P.M., and 9h. P.M. The means of the eye-readings of the barometer, the dry bulb thermometer, and the wet bulb thermometer are converted into mean daily values by the application of corrections deduced from a discussion of the photographic records made during the 50 years ending 1903. With the corrected mean reading of the dry bulb thermometer is combined the corrected mean of the readings of the maximum and minimum thermometers, forming the mean daily value of the temperature of the air (column 8). The mean daily dew point temperature and degree of humidity are deduced from the mean daily values of the dry and wet bulb thermometers by Hygrometric Tables, issued by the Air Ministry.

The average temperature of the air is that derived from a discussion of the observations made at Greenwich during the 65 years ending 1905, and that of horizontal movement of the air from a discussion of the anemometric records for the 50 years ending 1919.

In reading columns 9 and 24 it will be borne in mind that + indicates "higher," and - "lower" than the average.

The values given in column 17 are not corrected for the index error of the thermometer, which cannot be determined.

The record of Electricity is derived from Thomson's self-registering Electrometer.

The symbols employed are: -P. positive; N. negative; w. weak; m. moderate; s. strong; v. variable.

The numbers in column 27, derived from the Campbell Stokes Sunshine Instrument show the aggregate duration of bright sunshine each day.

The reading of the barometer increased from 29.19 ins. at the beginning of the week to 29.70 ins. by 21h. on 28th; decreased to 29.34 ins. by 15h. on 28th; increased to 29.43 ins. by 1h. on 29th; decreased to 28.79 ins. by 13h. on 30th; increased and was 29.12 ins. by midnight on the 31st.

EXPLANATORY STATEMENT.

TABLE 1 shows, for the several towns, the births and deaths (distinguishing deaths from certain causes and those of infants under one year of age) for the week ended last Saturday.

TABLE 2 shows the births and deaths (distinguishing certain causes) and death rates in London and in certain cities in the British Empire and in foreign countries.

TABLE 3 shows the deaths in London at ages and by causes of death and by cause in the current year to date with corresponding figures for previous year.

TABLE 4 is a summary of returns of notified cases of certain Infectious Diseases (*vide infra*).

TABLE 5 shows for (a) London and (b) the Great Towns in the aggregate the births, deaths (distinguishing those of infants under one year of age) and numbers of notified cases of and deaths from certain diseases in each of the preceding thirteen weeks and in the current year to date with corresponding figures for previous year.

TABLE 6 is a Report of the meteorological conditions in certain towns for the week as a whole.

TABLE 7 is a Report of the meteorological observations taken at Greenwich on each day of the week.

WEEKLY SUMMARY OF INFECTIOUS DISEASES (TABLE 4).

1. TABLE 4 is a weekly Summary of notified cases of certain specified infectious diseases in England and Wales and is based upon weekly returns received from the Medical Officers of Health of all Local Sanitary Authorities, including Port Sanitary Authorities. The figures are now included in the present publication by arrangement with the Ministry of Health in pursuance of Section 5 of the Census Act, 1920.

2. The arrangement of this Table is as follows:—

Particulars for London are contained in Part I. Part II. contains particulars for sanitary districts, outside London, arranged under county headings; the counties being entered in alphabetical order. Particulars for Port Sanitary Districts are given in Part III.

Under each county, the names of (a) the Boroughs and Urban Districts and (b) the Rural Districts, are entered in alphabetical order.

The names of Boroughs and Urban Districts with populations of over 10,000 according to the last Census, are marked with a †.

County Boroughs are marked "C.B."

3. The names of districts in respect of which "Nil" returns have been received indicating that no cases of the specified infectious diseases have been notified during the week, are omitted from this Summary.

4. The infectious diseases comprised in this Summary include the more important infectious diseases which are notifiable under the general law, and also cerebro-spinal fever, acute poliomyelitis, plague, acute poliomyelitis, encephalitis lethargica, pneumonia, dysentery, ophthalmia neonatorum, and puerperal pyrexia, which are notifiable either under the general law or under Orders which were made by the Local Government Board or Minister of Health.

The first five columns of the Summary relate to diseases specified in the headings to the columns: the heading "Diphtheria" includes Membranous Croup, the heading "Enteric Fever" includes Typhoid and Paratyphoid. The sixth column is intended to contain a figure (or figures) relating to one or more of the undermentioned diseases. In order to show to what disease any such figure relates, one of the following symbols is employed viz.:—A, Cholera; B, Plague; C, Puerperal Fever; D, Cerebro-Spinal Fever; E, Acute Poliomyelitis; F, Acute Polio-encephalitis; G, Encephalitis Lethargica; H, Typhus Fever; I, Relapsing Fever; J, Continued Fever; L, Dysentery; M, Ophthalmia Neonatorum; N, Puerperal Pyrexia. Cases of Plague (if any) are mentioned specially in footnotes.

5. Quarterly and annual summaries of the information, adjusted in respect of any returns or corrections received too late for the weekly issues, will be published in due course.

NOTES FOR THE WEEK ENDED 7TH APRIL, 1928.

BIRTHS AND DEATHS.

In the 107 County Boroughs and Great Towns of England and Wales the live births registered in the fourteenth week of the year numbered 6,110 corresponding to an annual rate of 16·2 per 1,000 living: stillbirths numbered 258 corresponding to a rate of 41 per 1,000 total births (including stillborn): the civilian deaths (excluding stillbirths) corrected as far as possible for non-residents numbered 4,840 (235 less than the number in the preceding week).

The annual death-rate in the Aggregate and in the largest of the County Boroughs and Great Towns in each of the last four weeks was as follows:—

—				Mar. 17.	Mar. 24.	Mar. 31.	April 7.
107 Great Towns	14·4	14·8	13·5	12·8
London	15·0	15·6	14·0	13·4
Birmingham	13·0	13·0	11·7	12·0
Liverpool	15·1	15·0	12·0	10·8
Manchester	15·8	15·6	15·0	12·5
Sheffield	13·2	16·5	15·1	12·9
Leeds	13·9	14·7	13·9	12·9
Bristol	15·1	14·9	12·2	15·5
West Ham	11·9	13·4	12·4	11·7

Infant mortality, based on the average weekly number of live births during the last 52 weeks, was 75 against 94, 89 and 84 in the preceding three weeks: during the last four weeks deaths from influenza numbered 100, 135, 135, and 108 respectively, and from measles 172, 166, 164, and 144 respectively.

In London (Administrative County including the City of London) there were 1,266 live births corresponding to an annual rate of 14·5 per 1,000 living: stillbirths numbered 46 corresponding to a rate of 35 per 1,000 total births (including stillborn): the civilian deaths (excluding stillbirths) numbered 1,169 (54 less than the number in the preceding week): infant mortality based on the average weekly number of live births during the last 52 weeks was 75 against 94, 99, and 87 in the three weeks preceding: during the last four weeks deaths from influenza numbered 15, 19, 18, and 6 respectively and from measles 97, 99, 88, and 82 respectively.

Population adjusted by the exclusion of non-civilians.
 The populations relate to 1928 except that of Belfast which is the Census figure of 1926 yearly
 rates having been discontinued. Deaths in Edinburgh and Glasgow are provisionally
 stated by the deduction of deaths of non-residents domiciled in Scotland and by the addition of
 deaths of residents reported from elsewhere in Scotland during the week: those in Dublin Registration
 and Belfast are corrected by the exclusion of deaths of persons admitted into public institutions
 without the respective areas.
 As extended 1st April, 1928.
 Return not received.

The results apply to the Civil Day or from midnight to midnight.

The height of the cistern of the barometer is 152 feet above the mean level of the sea; no correction has been applied to the readings to reduce to sea level.

Observations are usually taken at 9^h. A.M., noon, 3^h. P.M., and 9^h. P.M. The means of the eye-readings of the barometer, the dry bulb thermometer, and the wet bulb thermometer are converted into mean daily values by the application of corrections deduced from a discussion of the photographic records made during the 50 years ending 1903. With the corrected mean reading of the dry bulb thermometer is combined the corrected mean of the readings of the maximum and minimum thermometers, forming the mean daily value of the temperature of the air (column 8). The mean daily dew point temperature and degree of humidity are deduced from the mean daily values of the dry and wet bulb thermometers by Hygrometric Tables, issued by the Air Ministry.

The average temperature of the air is that derived from a discussion of the observations made at Greenwich during the 65 years ending 1905, and that of horizontal movement of the air from a discussion of the anemometric records for the 50 years ending 1915.

In reading columns 9 and 24 it will be borne in mind that + indicates "higher," and - "lower" than the average.

The values given in column 17 are not corrected for the index error of the thermometer, which cannot be determined.

The record of Electricity is derived from Thomson's self-registering Electrometer. The symbols employed are:—P. positive; N. negative; w. weak; m. moderate; s. strong; v. variable.

The numbers in column 27, derived from the Campbell Stokes Sunshine Instrument show the aggregate duration of bright sunshine each day.

The reading of the barometer increased from 29.12 ins. at the beginning of the week to 29.81 ins. by 20^h. on April 2nd; decreased to 29.35 ins. by 16^h. on April 4th; increased to 29.79 ins. by 22^h. on April 6th; decreased and was 29.32 ins. by 0^h. on Apr 18th.

EXPLANATORY STATEMENT.

TABLE 1 shows, for the several towns, the births and deaths (distinguishing deaths from certain causes and those of infants under one year of age) for the week ended last Saturday.

TABLE 2 shows the births and deaths (distinguishing certain causes) and death rates in London and in certain cities in the British Empire and in foreign countries.

TABLE 3 shows the deaths in London at ages and by causes of death and by cause in the current year to date with corresponding figures for previous year.

TABLE 4 is a summary of returns of notified cases of certain Infectious Diseases (*vide infra*).

TABLE 5 shows for (a) London and (b) the Great Towns in the aggregate the births, deaths (distinguishing those of infants under one year of age) and numbers of notified cases of and deaths from certain diseases in each of the preceding thirteen weeks and in the current year to date with corresponding figures for previous year.

TABLE 6 is a Report of the meteorological conditions in certain towns for the week as a whole.

TABLE 7 is a Report of the meteorological observations taken at Greenwich on each day of the week.

WEEKLY SUMMARY OF INFECTIOUS DISEASES (TABLE 4).

1. TABLE 4 is a weekly Summary of notified cases of certain specified infectious diseases in England and Wales and is based upon weekly returns received from the Medical Officers of Health of all Local Sanitary Authorities, including Port Sanitary Authorities. The figures are now included in the present publication by arrangement with the Ministry of Health in pursuance of Section 5 of the Census Act, 1920.

2. The arrangement of this Table is as follows:—

Particulars for London are contained in Part I. Part II. contains particulars for sanitary districts, outside London, arranged under county headings; the counties being entered in alphabetical order. Particulars for Port Sanitary Districts are given in Part III.

Under each county, the names of (a) the Boroughs and Urban Districts and (b) the Rural Districts, are entered in alphabetical order.

The names of Boroughs and Urban Districts with populations of over 10,000 according to the last Census, are marked with a †.

County Boroughs are marked "C.B."

3. The names of districts in respect of which "Nil" returns have been received indicating that no cases of the specified infectious diseases have been notified during the week, are omitted from this Summary.

4. The infectious diseases comprised in this Summary include the more important infectious diseases which are notifiable under the general law, and also cerebro-spinal fever, acute poliomyelitis, plague, acute poliomyelitis, encephalitis lethargica, pneumonia, dysentery, ophthalmia neonatorum, and puerperal pyrexia, which are notifiable either under the general law or under Orders which were made by the Local Government Board or Minister of Health.

The first five columns of the Summary relate to diseases specified in the headings to the columns: the heading "Diphtheria" includes Membranous Croup, the heading "Enteric Fever" includes Typhoid and Paratyphoid. The sixth column is intended to contain a figure (or figures) relating to one or more of the undermentioned diseases. In order to show to what disease any such figure relates, one of the following symbols is employed viz.:—A, Cholera; B, Plague; C, Puerperal Fever; D, Cerebro-Spinal Fever; E, Acute Poliomyelitis; F, Acute Polio-encephalitis; G, Encephalitis Lethargica; H, Typhus Fever; I, Relapsing Fever; J, Continued Fever; L, Dysentery; M, Ophthalmia Neonatorum; N, Puerperal Pyrexia. Cases of Plague (if any) are mentioned specially in footnotes.

5. Quarterly and annual summaries of the information, adjusted in respect of any returns or corrections received too late for the weekly issues, will be published in due course.

NOTES FOR THE WEEK ENDED 14TH APRIL, 1928.

BIRTHS AND DEATHS.

In the 107 County Boroughs and Great Towns of England and Wales the live births registered in the fifteenth week of the year numbered 6,603 corresponding to an annual rate of 17·5 per 1,000 living: stillbirths numbered 329 corresponding to a rate of 47 per 1,000 total births (including stillborn): the civilian deaths (excluding stillbirths) corrected as far as possible for non-residents numbered 4,981 (141 more than the number in the preceding week).

The annual death-rate in the Aggregate and in the largest of the County Boroughs and Great Towns in each of the last four weeks was as follows:—

—			Mar. 24.	Mar. 31.	April 7.	April 14.
107 Great Towns	14·8	13·5	12·8	13·2
London	15·6	14·0	13·4	13·8
Birmingham	13·0	11·7	12·0	12·0
Liverpool	15·0	12·0	10·8	14·0
Manchester	15·6	15·0	12·5	14·4
Sheffield	16·5	15·1	12·9	12·2
Leeds	14·7	13·9	12·9	14·6
Bristol	14·9	12·2	15·5	13·9
West Ham	13·4	12·4	11·7	11·7

Infant mortality, based on the average weekly number of live births during the last 52 weeks, was 78 against 89, 84 and 75 in the preceding three weeks: during the last four weeks deaths from influenza numbered 135, 135, 108, and 85 respectively, and from measles 166, 164, 144, and 143 respectively.

In London (Administrative County including the City of London) there were 1,444 live births corresponding to an annual rate of 16·6 per 1,000 living: stillbirths numbered 48 corresponding to a rate of 32 per 1,000 total births (including stillborn): the civilian deaths (excluding stillbirths) numbered 1,203 (34 more than the number in the preceding week): infant mortality based on the average weekly number of live births during the last 52 weeks was 85 against 99, 87, and 75 in the three weeks preceding: during the last four weeks deaths from influenza numbered 19, 18, 6, and 9 respectively and from measles 99, 88, 82, and 82 respectively.

* Population adjusted by the exclusion of non-civilians.

† The populations relate to 1928 except that of Belfast which is the Census figure of 1926 yearly estimates having been discontinued. Deaths in Edinburgh and Glasgow are provisionally corrected by the deduction of deaths of non-residents domiciled in Scotland and by the addition of deaths of residents reported from elsewhere in Scotland during the week; those in Dublin Registration Area and Belfast are corrected by the exclusion of deaths of persons admitted into public institutions from without the respective areas.

‡ As extended 1st April, 1928.

§ Return not received.

The results apply to the Civil Day or from midnight to midnight.

The height of the cistern of the barometer is 162 feet above the mean level of the sea; no correction has been applied to the readings to reduce to sea level.

Observations are usually taken at 9h. A.M., noon, 3h. P.M., and 9h. P.M. The means of the eye-readings of the barometer, the dry bulb thermometer, and the wet bulb thermometer are converted into mean daily values by the application of corrections deduced from a discussion of the photographic records made during the 50 years ending 1903. With the corrected mean reading of the dry bulb thermometer is combined the corrected mean of the readings of the maximum and minimum thermometers, forming the mean daily value of the temperature of the air (column 8). The mean daily dew point temperature and degree of humidity are deduced from the mean daily values of the dry and wet bulb thermometers by Hygrometric Tables, issued by the Air Ministry.

The average temperature of the air is that derived from a discussion of the observations made at Greenwich during the 65 years ending 1905, and that of horizontal movement of the air from a discussion of the anemometric records for the 60 years ending 1913.

In reading columns 9 and 24 it will be borne in mind that + indicates "higher," and - "lower," than the average.

The values given in column 17 are not corrected for the index error of the thermometer, which cannot be determined.

The record of Electricity is derived from Thomson's self-registering Electrometer. The symbols employed are: -P. positive; N. negative; w. weak; m. moderate; s. strong; V. variable.

The numbers in column 27, derived from the Campbell Stokes Sunshine Instrument show the aggregate duration of bright sunshine each day.

The reading of the barometer decreased from 29.32 ins. at the beginning of the week to 29.28 ins. by 4h. on 8th; increased to 29.53 ins. by 10h. on 9th; decreased to 29.24 ins. by 11h. on 10th; increased to 29.68 ins. by 20h. on 13th; decreased and was 29.44 ins. by midnight on the 14th.

EXPLANATORY STATEMENT.

TABLE 1 shows, for the several towns, the births and deaths (distinguishing deaths from certain causes and those of infants under one year of age) for the week ended last Saturday.

TABLE 2 shows the births and deaths (distinguishing certain causes) and death rates in London and in certain cities in the British Empire and in foreign countries.

TABLE 3 shows the deaths in London at ages and by causes of death and by cause in the current year to date with corresponding figures for previous year.

TABLE 4 is a summary of returns of notified cases of certain Infectious Diseases (*vide infra*).

TABLE 5 shows for (a) London and (b) the Great Towns in the aggregate the births, deaths (distinguishing those of infants under one year of age) and numbers of notified cases of and deaths from certain diseases in each of the preceding thirteen weeks and in the current year to date with corresponding figures for previous year.

TABLE 6 is a Report of the meteorological conditions in certain towns for the week as a whole.

TABLE 7 is a Report of the meteorological observations taken at Greenwich on each day of the week.

WEEKLY SUMMARY OF INFECTIOUS DISEASES (TABLE 4).

1. TABLE 4 is a weekly Summary of notified cases of certain specified infectious diseases in England and Wales and is based upon weekly returns received from the Medical Officers of Health of all Local Sanitary Authorities, including Port Sanitary Authorities. The figures are now included in the present publication by arrangement with the Ministry of Health in pursuance of Section 5 of the Census Act, 1920.

2. The arrangement of this Table is as follows:—

Particulars for London are contained in Part I. Part II. contains particulars for sanitary districts, outside London, arranged under county headings; the counties being entered in alphabetical order. Particulars for Port Sanitary Districts are given in Part III.

Under each county, the names of (a) the Boroughs and Urban Districts and (b) the Rural Districts, are entered in alphabetical order.

The names of Boroughs and Urban Districts with populations of over 10,000 according to the last Census, are marked with a †.

County Boroughs are marked "C.B."

3. The names of districts in respect of which "Nil" returns have been received indicating that no cases of the specified infectious diseases have been notified during the week, are omitted from this Summary.

4. The infectious diseases comprised in this Summary include the more important infectious diseases which are notifiable under the general law, and also cerebro-spinal fever, acute poliomyelitis, plague, acute poliomyelitis, encephalitis lethargica, pneumonia, dysentery, ophthalmia neonatorum, and puerperal pyrexia, which are notifiable either under the general law or under Orders which were made by the Local Government Board or Minister of Health.

The first five columns of the Summary relate to diseases specified in the headings to the columns: the heading "Diphtheria" includes Membranous Croup, the heading "Enteric Fever" includes Typhoid and Paratyphoid. The sixth column is intended to contain a figure (or figures) relating to one or more of the undermentioned diseases. In order to show to what disease any such figure relates, one of the following symbols is employed viz.:—A, Cholera; B, Plague; C, Puerperal Fever; D, Cerebro-Spinal Fever; E, Acute Poliomyelitis; F, Acute Polio-encephalitis; G, Encephalitis Lethargica; H, Typhus Fever; I, Relapsing Fever; J, Continued Fever; L, Dysentery; M, Ophthalmia Neonatorum; N, Puerperal Pyrexia. Cases of Plague (if any) are mentioned specially in footnotes.

5. Quarterly and annual summaries of the information, adjusted in respect of any returns or corrections received too late for the weekly issues, will be published in due course.

NOTES FOR THE WEEK ENDED 21ST APRIL, 1928.

BIRTHS AND DEATHS.

In the 107 County Boroughs and Great Towns of England and Wales the live births registered in the sixteenth week of the year numbered 7,344 corresponding to an annual rate of 19·4 per 1,000 living: stillbirths numbered 302 corresponding to a rate of 39 per 1,000 total births (including stillborn): the civilian deaths (excluding stillbirths) corrected as far as possible for non-residents numbered 4,731 (248 less than the number in the preceding week).

The annual death-rate in the Aggregate and in the largest of the County Boroughs and Great Towns in each of the last four weeks was as follows:—

	Mar. 31.	April 7.	April 14.	April 21.
107 Great Towns	13·5	12·8	13·2	12·5
London	14·0	13·4	13·8	13·1
Birmingham	11·7	12·0	12·0	11·8
Liverpool	12·0	10·8	14·0	13·0
Manchester	15·0	12·5	14·4	12·7
Sheffield	15·1	12·9	12·2	12·5
Leeds	13·9	12·9	14·6	12·6
Bristol	12·2	15·5	13·9	12·4
West Ham	12·4	11·7	11·7	10·4

Infant mortality, based on the average weekly number of live births during the last 52 weeks, was 75 against 84, 75 and 77 in the preceding three weeks: during the last four weeks deaths from influenza numbered 135, 108, 85, and 95 respectively, and from measles 164, 144, 142, and 118 respectively.

In London (Administrative County including the City of London) there were 1,524 live births corresponding to an annual rate of 17·5 per 1,000 living: stillbirths numbered 65 corresponding to a rate of 41 per 1,000 total births (including stillborn): the civilian deaths (excluding stillbirths) numbered 1,137 (66 less than the number in the preceding week): infant mortality based on the average weekly number of live births during the last 52 weeks was 64 against 87, 75, and 85 in the three weeks preceding: during the last four weeks deaths from influenza numbered 18, 6, 9, and 10 respectively and from measles 88, 82, 82, and 70 respectively.

* Population adjusted by the exclusion of non-civilians.

† The populations relate to 1928 except that of Belfast which is the Census figure of 1926 yearly estimates having been discontinued. Deaths in Edinburgh and Glasgow are provisionally corrected by the deduction of deaths of non-residents domiciled in Scotland and by the addition of deaths of residents reported from elsewhere in Scotland during the week: those in Dublin Registration Area and Belfast are corrected by the exclusion of deaths of persons admitted into public institutions from without the respective areas.

‡ As extended 1st April, 1928.

No. of Col. ..	26	Sum 29·3	Sum 97·9	28

The results apply to the Civil Day or from midnight to midnight.

The height of the cistern of the barometer is 152 feet above the mean level of the sea; no correction has been applied to the readings to reduce to sea level.

Observations are usually taken at 9h. A.M., noon, 3h. P.M., and 9h. P.M. The means of the eye-readings of the barometer, the dry bulb thermometer, and the wet bulb thermometer are converted into mean daily values by the application of corrections deduced from a discussion of the photographic records made during the 50 years ending 1903.

With the corrected mean reading of the dry bulb thermometer is combined the corrected mean of the readings of the maximum and minimum thermometers, forming the mean daily value of the temperature of the air (column 8). The mean daily dew point temperature and degree of humidity are deduced from the mean daily values of the dry and wet bulb thermometers by Hygrometric Tables, issued by the Air Ministry.

The average temperature of the air is that derived from a discussion of the observations made at Greenwich during the 65 years ending 1865, and that of horizontal movement of the air from a discussion of the anemometric records for the 50 years ending 1919.

In reading columns 9 and 24 it will be borne in mind that + indicates "higher," and - "lower" than the average.

The values given in column 17 are not corrected for the index error of the thermometer, which cannot be determined.

The record of Electricity is derived from Thomson's self-registering Electrometer.

The symbols employed are:—P. positive; N. negative; w. weak; m. moderate; s. strong; v. variable.

The numbers in column 27, derived from the Campbell Stokes Sunshine Instrument show the aggregate duration of bright sunshine each day.

The reading of the barometer decreased from 29·44 ins. at the beginning of the week to 29·41 ins. by 3h. on 15h.; increased to 29·52 ins. by 13h. on 15h.; decreased to 29·36 ins. by 4h. on 16h.; increased to 29·91 ins. by 23h. on 17h.; decreased to 29·65 ins. by 15h. on 19h.; increased to 29·75 ins. by 0h. on 20th.; decreased to 29·67 ins. by 19h. on 20th.; increased and was 29·78 ins. by midnight on the 21st.

STATISTICAL REVIEW.

The Registrar General's Statistical Review of
England and Wales for the Year 1926.

TABLES. PART I. MEDICAL.

This volume of nearly 500 closely printed pages contains classified in 31 separate 'Tables,' a wealth of Statistical data relating to public mortality. The figures given for the year 1926 give exhaustive information relating to the mortality of the population for more than 200 diseases &c. analysed by sex into age groups, together with a mass of other figures on other aspects of public health, e.g., infectious diseases, infant mortality, violent deaths, &c., &c.

Price 15s. net. Post Free 15s. 6d.

TABLES. PART II. CIVIL.

This volume contains the following statistics :—
Populations of United Kingdom and Ireland, British Dominions, Colonies and Possessions, and Foreign Countries; and for England and Wales, Births by sex and legitimacy, Marriages by age and civil condition, Divorces, Parliamentary and Local Government Electors by sex, and particulars of changes in boundary of poor law and administrative areas.

THE 1921 CENSUS

THE decennial census of England and Wales provides a wealth of statistical data relating to an exceptionally wide range of social conditions and activities and so furnishes matter of the greatest value for the solution of a vast number of current political and economic problems.

Encyclopædic in scope, the volumes are a storehouse of information of the most detailed nature and of exceptional accuracy which can be put to an extraordinary range and variety of uses. They have proved, for instance, of signal service in industry and commerce and to advertisers anxious to obtain quantitative data on which to base production and selling campaigns. Each County in England and Wales is surveyed separately and the figures relating to them are published in 52 volumes of foolscap folio size.

Ten general volumes are devoted to a grouping of statistics to illustrate the Industrial and Occupational divisions of the country and such special relationships as Dependency Orphanhood, etc. A general Report on the Census as a whole is now ready and is included in the set offered. It may be obtained separately 5s.5(Post Free 5s. 6d.).

The complete set of volumes originally cost £34 4s. net and it has been decided to offer the few sets that remain at the exceptionally low price of £12 net, postage extra.

The series may be ordered at this price at any of the sale offices of H.M. Stationery Office.

EXPLANATORY STATEMENT.

TABLE 1 shows, for the several towns, the births and deaths (distinguishing deaths from certain causes and those of infants under one year of age) for the week ended last Saturday.

TABLE 2 shows the births and deaths (distinguishing certain causes) and death rates in London and in certain cities in the British Empire and in foreign countries.

TABLE 3 shows the deaths in London at ages and by causes of death and by cause in the current year to date with corresponding figures for previous year.

TABLE 4 is a summary of returns of notified cases of certain Infectious Diseases (*vide infra*).

TABLE 5 shows for (a) London and (b) the Great Towns in the aggregate the births, deaths (distinguishing those of infants under one year of age) and numbers of notified cases of and deaths from certain diseases in each of the preceding thirteen weeks and in the current year to date with corresponding figures for previous year.

TABLE 6 is a Report of the meteorological conditions in certain towns for the week as a whole.

TABLE 7 is a Report of the meteorological observations taken at Greenwich on each day of the week.

WEEKLY SUMMARY OF INFECTIOUS DISEASES (TABLE 4).

1. TABLE 4 is a weekly Summary of notified cases of certain specified infectious diseases in England and Wales and is based upon weekly returns received from the Medical Officers of Health of all Local Sanitary Authorities, including Port Sanitary Authorities. The figures are now included in the present publication by arrangement with the Ministry of Health in pursuance of Section 5 of the Census Act, 1920.

2. The arrangement of this Table is as follows:—

Particulars for London are contained in Part I. Part II. contains particulars for sanitary districts, outside London, arranged under county headings; the counties being entered in alphabetical order. Particulars for Port Sanitary Districts are given in Part III.

Under each county, the names of (a) the Boroughs and Urban Districts and (b) the Rural Districts, are entered in alphabetical order.

The names of Boroughs and Urban Districts with populations of over 10,000 according to the last Census, are marked with a †.

County Boroughs are marked "C.B."

3. The names of districts in respect of which "Nil" returns have been received indicating that no cases of the specified infectious diseases have been notified during the week, are omitted from this Summary.

4. The infectious diseases comprised in this Summary include the more important infectious diseases which are notifiable under the general law, and also cerebro-spinal fever, acute poliomyelitis, plague, acute poli-encephalitis, encephalitis lethargica, pneumonia, dysentery, ophthalmia neonatorum, and puerperal pyrexia, which are notifiable either under the general law or under Orders which were made by the Local Government Board or Minister of Health.

The first five columns of the Summary relate to diseases specified in the headings to the columns: the heading "Diphtheria" includes Membranous Croup, the heading "Enteric Fever" includes Typhoid and Paratyphoid. The sixth column is intended to contain a figure (or figures) relating to one or more of the undermentioned diseases. In order to show to what disease any such figure relates, one of the following symbols is employed viz.:—A, Cholera; B, Plague; C, Puerperal Fever; D, Cerebro-Spinal Fever; E, Acute Poliomyelitis; F, Acute Polio-encephalitis; G, Encephalitis Lethargica; H, Typhus Fever; I, Relapsing Fever; J, Continued Fever; L, Dysentery; M, Ophthalmia Neonatorum; N, Puerperal Pyrexia. Cases of Plague (if any) are mentioned specially in footnotes.

5. Quarterly and annual summaries of the information, adjusted in respect of any returns or corrections received too late for the weekly issues, will be published in due course.

NOTES FOR THE WEEK ENDED 28TH APRIL, 1928.

BIRTHS AND DEATHS.

In the 107 County Boroughs and Great Towns of England and Wales the live births registered in the seventeenth week of the year numbered 7,246 corresponding to an annual rate of 19·2 per 1,000 living: stillbirths numbered 292 corresponding to a rate of 39 per 1,000 total births (including stillborn): the civilian deaths (excluding stillbirths) corrected as far as possible for non-residents numbered 4,858 (127 more than the number in the preceding week).

The annual death-rate in the Aggregate and in the largest of the County Boroughs and Great Towns in each of the last four weeks was as follows:—

—				April 7.	April 14.	April 21.	April 28.
107 Great Towns	12·8	13·2	12·5	12·9
London	13·4	13·8	13·1	13·0
Birmingham	12·0	12·0	11·8	11·8
Liverpool	10·8	14·0	13·0	12·9
Manchester	12·5	14·4	12·7	13·9
Sheffield	12·9	12·2	12·5	13·2
Leeds	12·9	14·6	12·6	14·5
Bristol	15·5	13·9	12·4	11·0
West Ham	11·7	11·7	10·4	11·6

Infant mortality, based on the average weekly number of live births during the last 52 weeks, was 70 against 75, 77 and 75 in the preceding three weeks: during the last four weeks deaths from influenza numbered 108, 85, 95, and 80 respectively, and from measles 144, 142, 118, and 117 respectively.

In London (Administrative County including the City of London) there were 1,571 live births corresponding to an annual rate of 18·0 per 1,000 living: stillbirths numbered 60 corresponding to a rate of 37 per 1,000 total births (including stillborn): the civilian deaths (excluding stillbirths) numbered 1,135 (2 less than the number in the preceding week): infant mortality based on the average weekly number of live births during the last 52 weeks was 72 against 75, 85, and 64 in the three weeks preceding: during the last four weeks deaths from influenza numbered 6, 9, 10, and 10 respectively and from measles 82, 82, 70, and 75 respectively.

During the week small-pox was mentioned as a cause of death in two cases. These cases have been provisionally classified to small-pox and assigned to Gateshead, C.B.

* Population adjusted by the exclusion of non-civilians.

† The populations relate to 1926 except that of Belfast which is the Census figure of 1926 yearly estimates having been discontinued. Deaths in Edinburgh and Glasgow are provisionally corrected by the deduction of deaths of non-residents domiciled in Scotland and by the addition of deaths of residents reported from elsewhere in Scotland during the week; those in Dublin Registration Area and Belfast are corrected by the exclusion of deaths of persons admitted into public institutions from without the respective areas.

‡ As extended 1st April, 1928.

§ Including two deaths from small-pox

The results apply to the Civil Day or from midnight to midnight.

The height of the cistern of the barometer is 152 feet above the mean level of the sea: no correction has been applied to the readings to reduce to sea level.

Observations are usually taken at 9h. A.M., noon, 3h. P.M., and 9h. P.M. The means of the eye-readings of the barometer, the dry bulb thermometer, and the wet bulb thermometer are converted into mean daily values by the application of corrections deduced from a discussion of the photographic records made during the 50 years ending 1903. With the corrected mean reading of the dry bulb thermometer is combined the corrected mean of the readings of the maximum and minimum thermometers, forming the mean daily value of the temperature of the air (column 8). The mean daily dew point temperature and degree of humidity are deduced from the mean daily values of the dry and wet bulb thermometers by Hygrometric Tables, issued by the Air Ministry.

The average temperature of the air is that derived from a discussion of the observations made at Greenwich during the 65 years ending 1903, and that of horizontal movement of the air from a discussion of the anemometric records for the 50 years ending 1919.

In reading columns 9 and 24 it will be borne in mind that + indicates "higher," and - "lower" than the average.

The values given in column 17 are not corrected for the index error of the thermometer, which cannot be determined.

The record of Electricity is derived from Thomson's self-registering Electrometer. The symbols employed are: -P. positive; N. negative; w. weak; m. moderate; s. strong; v. variable.

The numbers in column 27, derived from the Campbell Stokes Sunshine Instrument show the aggregate duration of bright sunshine each day.

The reading of the barometer increased from 29.73 ins. at the beginning of the week to 30.12 ins. by 23h. on 23rd; decreased generally to 29.41 ins. by 11h. on 27th; increased to 29.73 ins. by 10h. on 28th; decreased and was 29.72 ins. by midnight on the same day.

EXPLANATORY STATEMENT.

TABLE 1 shows, for the several towns, the births and deaths (distinguishing deaths from certain causes and those of infants under one year of age) for the week ended last Saturday.

TABLE 2 shows the births and deaths (distinguishing certain causes) and death rates in London and in certain cities in the British Empire and in foreign countries.

TABLE 3 shows the deaths in London at ages and by causes of death and by cause in the current year to date with corresponding figures for previous year.

TABLE 4 is a summary of returns of notified cases of certain Infectious Diseases (*vide infra*).

TABLE 5 shows for (a) London and (b) the Great Towns in the aggregate the births, deaths (distinguishing those of infants under one year of age) and numbers of notified cases of and deaths from certain diseases in each of the preceding thirteen weeks and in the current year to date with corresponding figures for previous year.

TABLE 6 is a Report of the meteorological conditions in certain towns for the week as a whole.

TABLE 7 is a Report of the meteorological observations taken at Greenwich on each day of the week.

WEEKLY SUMMARY OF INFECTIOUS DISEASES (TABLE 4).

1. TABLE 4 is a weekly Summary of notified cases of certain specified infectious diseases in England and Wales and is based upon weekly returns received from the Medical Officers of Health of all Local Sanitary Authorities, including Port Sanitary Authorities. The figures are now included in the present publication by arrangement with the Ministry of Health in pursuance of Section 5 of the Census Act, 1920.

2. The arrangement of this Table is as follows:—

Particulars for London are contained in Part I. Part II. contains particulars for sanitary districts, outside London, arranged under county headings; the counties being entered in alphabetical order. Particulars for Port Sanitary Districts are given in Part III.

Under each county, the names of (a) the Boroughs and Urban Districts and (b) the Rural Districts, are entered in alphabetical order.

The names of Boroughs and Urban Districts with populations of over 10,000 according to the last Census, are marked with a †.

County Boroughs are marked "C.B."

3. The names of districts in respect of which "Nil" returns have been received indicating that no cases of the specified infectious diseases have been notified during the week, are omitted from this Summary.

4. The infectious diseases comprised in this Summary include the more important infectious diseases which are notifiable under the general law, and also cerebro-spinal fever, acute poliomyelitis, plague, acute poliomyelitis, encephalitis lethargica, pneumonia, dysentery, ophthalmia neonatorum, and puerperal pyrexia, which are notifiable either under the general law or under Orders which were made by the Local Government Board or Minister of Health.

The first five columns of the Summary relate to diseases specified in the headings to the columns: the heading "Diphtheria" includes Membranous Croup, the heading "Enteric Fever" includes Typhoid and Paratyphoid. The sixth column is intended to contain a figure (or figures) relating to one or more of the undermentioned diseases. In order to show to what disease any such figure relates, one of the following symbols is employed viz.:—A, Cholera; B, Plague; C, Puerperal Fever; D, Cerebro-Spinal Fever; E, Acute Poliomyelitis; F, Acute Polio-encephalitis; G, Encephalitis Lethargica; H, Typhus Fever; I, Relapsing Fever; J, Continued Fever; L, Dysentery; M, Ophthalmia Neonatorum; N, Puerperal Pyrexia. Cases of Plague (if any) are mentioned specially in footnotes.

5. Quarterly and annual summaries of the information, adjusted in respect of any returns or corrections received too late for the weekly issues, will be published in due course.

NOTES FOR THE WEEK ENDED 5TH MAY, 1928.

BIRTHS AND DEATHS.

In the 107 County Boroughs and Great Towns of England and Wales the live births registered in the eighteenth week of the year numbered 7,067 corresponding to an annual rate of 18·7 per 1,000 living: stillbirths numbered 315 corresponding to a rate of 43 per 1,000 total births (including stillborn): the civilian deaths (excluding stillbirths) corrected as far as possible for non-residents numbered 4,529 (329 less than the number in the preceding week).

The annual death-rate in the Aggregate and in the largest of the County Boroughs and Great Towns in each of the last four weeks was as follows:—

—				April 14.	April 21.	April 28.	May 5.
107 Great Towns	13·2	12·5	12·9	12·0
London	13·8	13·1	13·0	12·9
Birmingham	12·0	11·8	11·8	10·2
Liverpool	14·0	13·0	12·9	11·8
Manchester	14·4	12·7	13·9	13·8
Sheffield	12·2	12·5	13·2	11·7
Leeds	14·6	12·6	14·5	10·6
Bristol	13·9	12·4	11·0	9·3
West Ham	11·7	10·4	11·6	11·6

Infant mortality, based on the average weekly number of live births during the last 52 weeks, was 68 against 77, 75 and 70 in the preceding three weeks: during the last four weeks deaths from influenza numbered 85, 95, 80, and 73 respectively, and from measles 142, 118, 117, and 89 respectively.

In London (Administrative County including the City of London) there were 1,523 live births corresponding to an annual rate of 17·5 per 1,000 living: stillbirths numbered 57 corresponding to a rate of 36 per 1,000 total births (including stillborn): the civilian deaths (excluding stillbirths) numbered 1,127 (8 less than the number in the preceding week): infant mortality based on the average weekly number of live births during the last 52 weeks was 72 against 85, 64, and 72 in the three weeks preceding: during the last four weeks deaths from influenza numbered 9, 10, 10, and 19 respectively and from measles 82, 70, 75, and 52 respectively.

During the week small-pox was mentioned as a cause of death in one case. This has been provisionally classified to small-pox and assigned to Bradford, C.B.

* Population adjusted by the exclusion of non-civilians.

† The populations relate to 1928 except that of Belfast which is the Census figure of 1926 yearly estimates having been discontinued. Deaths in Edinburgh and Glasgow are provisionally created by the deduction of deaths of non-residents domiciled in Scotland and by the addition of deaths of residents reported from elsewhere in Scotland during the week; those in Dublin Registration Area and Belfast are corrected by the exclusion of deaths of persons admitted into public institutions in without the respective areas.

‡ As extended 1st April, 1928.

§ Including one death from small-pox.

|| Return not received.

Table 2.—LONDON and certain CITIES in the } BIRTHS and DEATHS for last available period.

The results apply to the Civil Day or from midnight to midnight.

The height of the cistern of the barometer is 162 feet above the mean level of the sea; no correction has been applied to the readings to reduce to sea level.

Observations are usually taken at 9h. A.M., noon, 3h. P.M., and 9h. P.M. The means of the eye-readings of the barometer the dry bulb thermometer, and the wet bulb thermometer are converted into mean daily values by the application of corrections deduced from a discussion of the photographic records made during the 50 years ending 1903. With the corrected mean reading of the dry bulb thermometer is combined the corrected mean of the readings of the maximum and minimum thermometers, forming the mean daily value of the temperature of the air (column 8). The mean daily dew point temperature and degree of humidity are deduced from the mean daily values of the dry and wet bulb thermometers by Hygrometric Tables, issued by the Air Ministry.

The average temperature of the air is that derived from a discussion of the observations made at Greenwich during the 65 years ending 1905, and that of horizontal movement of the air from a discussion of the anemometric records for the 50 years ending 1919.

In reading columns 9 and 24 it will be borne in mind that + indicates "higher," and - "lower," than the average.

The values given in column 17 are not corrected for the index error of the thermometer, which cannot be determined.

The record of Electricity is derived from Thomson's self-registering Electrometer. The symbols employed are: -P, positive; N, negative; w, weak; m, moderate; s, strong; v, variable.

The numbers in column 27, derived from the Campbell Stokes Sunshine Instrument show the aggregate duration of bright sunshine each day.

The reading of the barometer decreased from 29.72 ins. at the beginning of the week to 29.48 ins. by 8h. on April 30th; increased to 29.72 ins. by 22h. on May 1st; decreased to 29.44 ins. by 16h. on May 3rd; increased and was 29.65 ins. by midnight on May 5th.

EXPLANATORY STATEMENT.

TABLE 1 shows, for the several towns, the births and deaths (distinguishing deaths from certain causes and those of infants under one year of age) for the week ended last Saturday.

TABLE 2 shows the births and deaths (distinguishing certain causes) and death rates in London and in certain cities in the British Empire and in foreign countries.

TABLE 3 shows the deaths in London at ages and by causes of death and by cause in the current year to date with corresponding figures for previous year.

TABLE 4 is a summary of returns of notified cases of certain Infectious Diseases (*vide infra*).

TABLE 5 shows for (a) London and (b) the Great Towns in the aggregate the births, deaths (distinguishing those of infants under one year of age) and numbers of notified cases of and deaths from certain diseases in each of the preceding thirteen weeks and in the current year to date with corresponding figures for previous year.

TABLE 6 is a Report of the meteorological conditions in certain towns for the week as a whole.

TABLE 7 is a Report of the meteorological observations taken at Greenwich on each day of the week.

WEEKLY SUMMARY OF INFECTIOUS DISEASES (TABLE 4).

1. TABLE 4 is a weekly Summary of notified cases of certain specified infectious diseases in England and Wales and is based upon weekly returns received from the Medical Officers of Health of all Local Sanitary Authorities, including Port Sanitary Authorities. The figures are now included in the present publication by arrangement with the Ministry of Health in pursuance of Section 5 of the Census Act, 1920.

2. The arrangement of this Table is as follows:—

Particulars for London are contained in Part I. Part II. contains particulars for sanitary districts, outside London, arranged under county headings; the counties being entered in alphabetical order. Particulars for Port Sanitary Districts are given in Part III.

Under each county, the names of (a) the Boroughs and Urban Districts and (b) the Rural Districts, are entered in alphabetical order.

The names of Boroughs and Urban Districts with populations of over 10,000 according to the last Census, are marked with a †.

County Boroughs are marked "C.B."

3. The names of districts in respect of which "Nil" returns have been received indicating that no cases of the specified infectious diseases have been notified during the week, are omitted from this Summary.

4. The infectious diseases comprised in this Summary include the more important infectious diseases which are notifiable under the general law, and also cerebro-spinal fever, acute poliomyelitis, plague, acute polio-encephalitis, encephalitis lethargica, pneumonia, dysentery, ophthalmia neonatorum, and puerperal pyrexia, which are notifiable either under the general law or under Orders which were made by the Local Government Board or Minister of Health.

The first five columns of the Summary relate to diseases specified in the headings to the columns: the heading "Diphtheria" includes Membranous Croup, the heading "Enteric Fever" includes Typhoid and Paratyphoid. The sixth column is intended to contain a figure (or figures) relating to one or more of the undermentioned diseases. In order to show to what disease any such figure relates, one of the following symbols is employed viz.:—A, Cholera; B, Plague; C, Puerperal Fever; D, Cerebro-Spinal Fever; E, Acute Poliomyelitis; F, Acute Polio-encephalitis; G, Encephalitis Lethargica; H, Typhus Fever; I, Relapsing Fever; J, Continued Fever; L, Dysentery; M, Ophthalmia Neonatorum; N, Puerperal Pyrexia. Cases of Plague (if any) are mentioned specially in footnotes.

5. Quarterly and annual summaries of the information, adjusted in respect of any returns or corrections received too late for the weekly issues, will be published in due course.

NOTES FOR THE WEEK ENDED 12TH MAY, 1928.

BIRTHS AND DEATHS.

In the 107 County Boroughs and Great Towns of England and Wales the live births registered in the nineteenth week of the year numbered 6,875 corresponding to an annual rate of 18·2 per 1,000 living: stillbirths numbered 314 corresponding to a rate of 44 per 1,000 total births (including stillborn): the civilian deaths (excluding stillbirths) corrected as far as possible for non-residents numbered 4,112 (417 less than the number in the preceding week).

The annual death-rate in the Aggregate and in the largest of the County Boroughs and Great Towns in each of the last four weeks was as follows:—

—	April 21.	April 28.	May 5.	May 12.
107 Great Towns	12·5	12·9	12·0	10·9
London	13·1	13·0	12·9	10·9
Birmingham	11·8	11·8	10·2	8·5
Liverpool	13·0	12·9	11·8	10·9
Manchester	12·7	13·9	13·8	13·7
Sheffield	12·5	13·2	11·7	10·9
Leeds	12·6	14·5	10·6	13·6
Bristol	12·4	11·0	9·3	9·2
West Ham	10·4	11·6	11·6	6·8

Infant mortality, based on the average weekly number of live births during the last 52 weeks, was 58 against 75, 70 and 68 in the preceding three weeks: during the last four weeks deaths from influenza numbered 95, 80, 73, and 80 respectively, and from measles 118, 117, 89, and 71 respectively.

In London (Administrative County including the City of London) there were 1,554 live births corresponding to an annual rate of 17·8 per 1,000 living: stillbirths numbered 57 corresponding to a rate of 35 per 1,000 total births (including stillborn): the civilian deaths (excluding stillbirths) numbered 948 (179 less than the number in the preceding week): infant mortality based on the average weekly number of live births during the last 52 weeks was 54 against 64, 72, and 72 in the three weeks preceding: during the last four weeks deaths from influenza numbered 10, 10, 19, and 10 respectively and from measles 70, 75, 52, and 37 respectively.

During the week small-pox was mentioned as a cause of death in two cases. These have been provisionally classified to small-pox and assigned to Bradford, C.B., and Middlesbrough, C.B.

BELFAST† ..	415,151	189	?	126	21	1	-	-	1	-	6	-

* Population adjusted by the exclusion of non-civilians.

† The populations relate to 1928 except that of Belfast which is the Census figure of 1926 yearly estimates having been discontinued. Deaths in Edinburgh and Glasgow are provisionally corrected by the deduction of deaths of non-residents domiciled in Scotland and by the addition of deaths of residents reported from elsewhere in Scotland during the week: those in Dublin Registration Area and Belfast are corrected by the exclusion of deaths of persons admitted into public institutions from without the respective areas.

‡ As extended 1st April, 1928.

§ Including one death from small-pox.

The results apply to the Civil Day or from midnight to midnight.

The height of the cistern of the barometer is 162 feet above the mean level of the sea; no correction has been applied to the readings to reduce to sea level.

Observations are usually taken at 9h. A.M., noon, 3h. P.M., and 9h. P.M. The means of the eye-readings of the barometer, the dry bulb thermometer, and the wet bulb thermometer are converted into mean daily values by the application of corrections deduced from a discussion of the photographic records made during the 50 years ending 1903. With the corrected mean reading of the dry bulb thermometer is combined the corrected mean of the readings of the maximum and minimum thermometers, forming the mean daily value of the temperature of the air (column 6). The mean daily dew point temperature and degree of humidity are deduced from the mean daily values of the air, and wet bulb thermometers by Hygrometric Tables, issued by the Air Ministry.

The average temperature of the air is that derived from a discussion of the observations made at Greenwich during the 65 years ending 1906, and that of horizontal movement of the air from a discussion of the anemometric records for the 60 years ending 1913.

In reading columns 9 and 24 it will be borne in mind that + indicates "higher," and - "lower" than the average.

The values given in column 17 are not corrected for the index error of the thermometer, which cannot be determined.

The record of Electricity is derived from Thomson's self-registering Electrometer. The symbols employed are: - P. positive; N. negative; w. weak; m. moderate; s. strong; v. variable.

The numbers in column 27 derived from the Campbell Stokes Sunshine Instrument show the aggregate duration of bright sunshine each day.

The reading of the barometer increased generally from 29.65 ins. at the beginning of the week to 29.98 ins. by 7h. on 10th; decreased to 29.88 ins. by 19h. on 10th; increased and was 30.01 ins. by midnight on the 12th.

EXPLANATORY STATEMENT.

TABLE 1 shows, for the several towns, the births and deaths (distinguishing deaths from certain causes and those of infants under one year of age) for the week ended last Saturday.

TABLE 2 shows the births and deaths (distinguishing certain causes) and death rates in London and in certain cities in the British Empire and in foreign countries.

TABLE 3 shows the deaths in London at ages and by causes of death and by cause in the current year to date with corresponding figures for previous year.

TABLE 4 is a summary of returns of notified cases of certain Infectious Diseases (*vide infra*).

TABLE 5 shows for (a) London and (b) the Great Towns in the aggregate the births, deaths (distinguishing those of infants under one year of age) and numbers of notified cases of and deaths from certain diseases in each of the preceding thirteen weeks and in the current year to date with corresponding figures for previous year.

TABLE 6 is a Report of the meteorological conditions in certain towns for the week as a whole.

TABLE 7 is a Report of the meteorological observations taken at Greenwich on each day of the week.

WEEKLY SUMMARY OF INFECTIOUS DISEASES (TABLE 4).

1. TABLE 4 is a weekly Summary of notified cases of certain specified infectious diseases in England and Wales and is based upon weekly returns received from the Medical Officers of Health of all Local Sanitary Authorities, including Port Sanitary Authorities. The figures are now included in the present publication by arrangement with the Ministry of Health in pursuance of Section 5 of the Census Act, 1920.

2. The arrangement of this Table is as follows:—

Particulars for London are contained in Part I. Part II. contains particulars for sanitary districts, outside London, arranged under county headings; the counties being entered in alphabetical order. Particulars for Port Sanitary Districts are given in Part III.

Under each county, the names of (a) the Boroughs and Urban Districts and (b) the Rural Districts, are entered in alphabetical order.

The names of Boroughs and Urban Districts with populations of over 10,000 according to the last Census, are marked with a †.

County Boroughs are marked "C.B."

3. The names of districts in respect of which "Nil" returns have been received indicating that no cases of the specified infectious diseases have been notified during the week, are omitted from this Summary.

4. The infectious diseases comprised in this Summary include the more important infectious diseases which are notifiable under the general law, and also cerebro-spinal fever, acute poliomyelitis, plague, acute poli-encephalitis, encephalitis lethargica, pneumonia, dysentery, ophthalmia neonatorum, and puerperal pyrexia, which are notifiable either under the general law or under Orders which were made by the Local Government Board or Minister of Health.

The first five columns of the Summary relate to diseases specified in the headings to the columns: the heading "Diphtheria" includes Membranous Croup, the heading "Enteric Fever" includes Typhoid and Paratyphoid. The sixth column is intended to contain a figure (or figures) relating to one or more of the undermentioned diseases. In order to show to what disease any such figure relates, one of the following symbols is employed viz.:—A, Cholera; B, Plague; C, Puerperal Fever; D, Cerebro-Spinal Fever; E, Acute Poliomyelitis; F, Acute Polio-encephalitis; G, Encephalitis Lethargica; H, Typhus Fever; I, Relapsing Fever; J, Continued Fever; L, Dysentery; M, Ophthalmia Neonatorum; N, Puerperal Pyrexia. Cases of Plague (if any) are mentioned specially in footnotes.

5. Quarterly and annual summaries of the information, adjusted in respect of any returns or corrections received too late for the weekly issues, will be published in due course.

NOTES FOR THE WEEK ENDED 19TH MAY, 1928.

BIRTHS AND DEATHS.

In the 107 County Boroughs and Great Towns of England and Wales the live births registered in the twentieth week of the year numbered 6,590 corresponding to an annual rate of 17·4 per 1,000 living: stillbirths numbered 305 corresponding to a rate of 44 per 1,000 total births (including stillborn): the civilian deaths (excluding stillbirths) corrected as far as possible for non-residents numbered 4,193 (81 more than the number in the preceding week).

The annual death-rate in the Aggregate and in the largest of the County Boroughs and Great Towns in each of the last four weeks was as follows:—

—	April 28.	May 5.	May 12.	May 19.
107 Great Towns	12·9	12·0	10·9	11·1
London	13·0	12·9	10·9	10·9
Birmingham	11·8	10·2	8·5	10·8
Liverpool	12·9	11·8	10·9	11·3
Manchester	13·9	13·8	13·7	13·5
Sheffield	13·2	11·7	10·9	11·8
Leeds	14·5	10·6	13·6	11·6
Bristol	11·0	9·3	9·2	11·4
West Ham	11·6	11·6	6·8	7·9

Infant mortality, based on the average weekly number of live births during the last 52 weeks, was 60 against 70, 68 and 58 in the preceding three weeks: during the last four weeks deaths from influenza numbered 80, 73, 80, and 65 respectively, and from measles 117, 89, 70, and 60 respectively.

In London (Administrative County including the City of London) there were 1,395 live births corresponding to an annual rate of 16·0 per 1,000 living: stillbirths numbered 59 corresponding to a rate of 41 per 1,000 total births (including stillborn): the civilian deaths (excluding stillbirths) numbered 945 (3 less than the number in the preceding week): infant mortality based on the average weekly number of live births during the last 52 weeks was 63 against 72, 72, and 54 in the three weeks preceding: during the last four weeks deaths from influenza numbered 10, 19, 10, and 11 respectively and from measles 75, 52, 37, and 24 respectively. A death in which small-pox was mentioned on the certificate but which has been classed to cancer should have been shown in last week's return. The death has been provisionally assigned to Lambeth.

DEATHS FROM SMALL-POX.

Hitherto the record of deaths from small-pox published in the weekly return has been restricted to cases belonging to the County Boroughs and Great Towns (including Greater London). In future a supplementary statement will be published at monthly intervals giving particulars of deaths belonging to other areas in England and Wales, while the complete quarterly record will appear, as usual, in the quarterly return.

The returns received for the month of April last include 4 deaths belonging to areas outside the County Boroughs and Great Towns certified as due to small-pox either as principal or contributory cause. These deaths have been provisionally classed to small-pox and assigned to the following areas:—

Kent	Malling R.D.
Staffordshire	Lichfield M.B.
Warwickshire	Royal Leamington Spa M.B.
Yorkshire, West Riding ...	Honley U.D.

* Population adjusted by the exclusion of non-civilians.

† The populations relate to 1928 except that of Belfast which is the Census figure of 1926 yearly estimates having been discontinued. Deaths in Edinburgh and Glasgow are provisionally corrected by the deduction of deaths of non-residents domiciled in Scotland and by the addition of deaths of residents reported from elsewhere in Scotland during the week; those in Dublin Registration area and Belfast are corrected by the exclusion of deaths of persons admitted into public institutions from without the respective areas.

‡ As extended 1st April, 1928.

MAY.					
SUNDAY	13	wP	0.1	15.4	Overcast.
MONDAY	14	wP till 7h.; vari- ably wP and mN till 13h.; then wP.	1.1	15.5	Overcast generally. Rain 7½h. till 12h.; and 16½h. till 18½h. Damping 12h. till 15½h. Thunder 11½h. till 12½h. Dew at night.
TUESDAY	15	wP	6.0	15.5	Cloudless till 7½h.; then nearly over- cast. Slight rain at 17h.; 17½h.; and 18½h. Showers at 21½h. and 23h.
WEDNESDAY	16	wP till 3½h.; vari- ably wP and mN till 17h.; then wP.	0.5	15.6	Overcast generally. Rain at 2h.; and generally from 4h. till 15½h.; and occa- sionally between 16h. and 18h.
THURSDAY	17	wP	1.2	15.6	Nearly overcast generally. Showers at 3h.; 4½h.; and 21½h. Slight rain 18h. till 18½h.
FRIDAY	18	Variably wP and wN till 12h.; vari- ably mP and sN till 19h.; then wP.	0.2	15.7	Overcast till 19½h.; then nearly cloud- less. Rain generally till 13½h.; and frequently between 15½h. and 19½h. Hail about 18h. Thunder at 11h.; 20½h. and 21h.
SATURDAY	19	wP till 13h.; vari- ably sP and sN till 19h.; then wP.	6.0	15.7	Nearly cloudless till 11h.; then be- coming nearly overcast by 12½h. Rain 13½h. till 15½h.; and occasionally between 17½h. and 22½h. Thunder and lightning between 13½h. and 14½h.
No. of Col...		26	Sum 15.1	Sum 109.0	
			27	28	

The results apply to the Civil Day or from midnight to midnight.

The height of the cistern of the barometer is 152 feet above the mean level of the sea; no correction has been applied to the readings to reduce to sea level.

Observations are usually taken at 9h. A.M., noon, 3h. P.M., and 9h. P.M. The means of the eye-readings of the barometer, the dry bulb thermometer, and the wet bulb thermometer are converted into mean daily values by the application of corrections deduced from a discussion of the photographic records made during the 50 years ending 1903. With the corrected mean reading of the dry bulb thermometer is combined the corrected mean of the readings of the maximum and minimum thermometers, forming the mean daily value of the temperature of the air (column 8). The mean daily dew point temperature and degree of humidity are deduced from the mean daily values of the dry and wet bulb thermometers by Hygrometric Tables, issued by the Air Ministry.

The average temperature of the air is that derived from a discussion of the observations made at Greenwich during the 65 years ending 1903, and that of horizontal movement of the air from a discussion of the anemometric records for the 50 years ending 1918.

In reading columns 9 and 24 it will be borne in mind that + indicates "higher," and - "lower" than the average.

The values given in column 17 are not corrected for the index error of the thermometer, which cannot be determined.

The record of Electricity is derived from Thomson's self-registering Electrometer. The symbols employed are: -P. positive; N. negative; w. weak; m. moderate; s. strong; v. variable.

The numbers in column 27, derived from the Campbell Stokes Sunshine Instrument show the aggregate duration of bright sunshine each day.

The reading of the barometer increased from 30.01 ins. at the beginning of the week to 30.03 ins. by 8h. on 13th; decreased to 29.30 ins. by 8h. on 16th; increased to 29.46 ins. by 0h. on 17th; decreased to 29.21 ins. by 3h. on 18th; increased generally and was 29.66 ins. by midnight on the 19th.

EXPLANATORY STATEMENT.

TABLE 1 shows, for the several towns, the births and deaths (distinguishing deaths from certain causes and those of infants under one year of age) for the week ended last Saturday.

TABLE 2 shows the births and deaths (distinguishing certain causes) and death rates in London and in certain cities in the British Empire and in foreign countries.

TABLE 3 shows the deaths in London at ages and by causes of death and by cause in the current year to date with corresponding figures for previous year.

TABLE 4 is a summary of returns of notified cases of certain Infectious Diseases (*vide infra*).

TABLE 5 shows for (a) London and (b) the Great Towns in the aggregate the births, deaths (distinguishing those of infants under one year of age) and numbers of notified cases of and deaths from certain diseases in each of the preceding thirteen weeks and in the current year to date with corresponding figures for previous year.

TABLE 6 is a Report of the meteorological conditions in certain towns for the week as a whole.

TABLE 7 is a Report of the meteorological observations taken at Greenwich on each day of the week.

WEEKLY SUMMARY OF INFECTIOUS DISEASES (TABLE 4).

1. TABLE 4 is a weekly Summary of notified cases of certain specified infectious diseases in England and Wales and is based upon weekly returns received from the Medical Officers of Health of all Local Sanitary Authorities, including Port Sanitary Authorities. The figures are now included in the present publication by arrangement with the Ministry of Health in pursuance of Section 5 of the Census Act, 1920.

2. The arrangement of this Table is as follows:—

Particulars for London are contained in Part I. Part II. contains particulars for sanitary districts, outside London, arranged under county headings; the counties being entered in alphabetical order. Particulars for Port Sanitary Districts are given in Part III.

Under each county, the names of (a) the Boroughs and Urban Districts and (b) the Rural Districts, are entered in alphabetical order.

The names of Boroughs and Urban Districts with populations of over 10,000 according to the last Census, are marked with a †.

County Boroughs are marked "C.B."

3. The names of districts in respect of which "Nil" returns have been received indicating that no cases of the specified infectious diseases have been notified during the week, are omitted from this Summary.

4. The infectious diseases comprised in this Summary include the more important infectious diseases which are notifiable under the general law, and also cerebro-spinal fever, acute poliomyelitis, plague, acute poliomyelitis, encephalitis lethargica, pneumonia, dysentery, ophthalmia neonatorum, and puerperal pyrexia, which are notifiable either under the general law or under Orders which were made by the Local Government Board or Minister of Health.

The first five columns of the Summary relate to diseases specified in the headings to the columns: the heading "Diphtheria" includes Membranous Croup, the heading "Enteric Fever" includes Typhoid and Paratyphoid. The sixth column is intended to contain a figure (or figures) relating to one or more of the undermentioned diseases. In order to show to what disease any such figure relates, one of the following symbols is employed viz.:—A, Cholera; B, Plague; C, Puerperal Fever; D, Cerebro-Spinal Fever; E, Acute Poliomyelitis; F, Acute Polio-encephalitis; G, Encephalitis Lethargica; H, Typhus Fever; I, Relapsing Fever; J, Continued Fever; L, Dysentery; M, Ophthalmia Neonatorum; N, Puerperal Pyrexia. Cases of Plague (if any) are mentioned specially in footnotes.

5. Quarterly and annual summaries of the information, adjusted in respect of any returns or corrections received too late for the weekly issues, will be published in due course.

NOTES FOR THE WEEK ENDED 26TH MAY, 1928.

BIRTHS AND DEATHS.

In the 107 County Boroughs and Great Towns of England and Wales the live births registered in the twenty-first week of the year numbered 6,931 corresponding to an annual rate of 18·3 per 1,000 living: stillbirths numbered 317 corresponding to a rate of 44 per 1,000 total births (including stillborn): the civilian deaths (excluding stillbirths) corrected as far as possible for non-residents numbered 4,344 (151 more than the number in the preceding week).

The annual death-rate in the Aggregate and in the largest of the County Boroughs and Great Towns in each of the last four weeks was as follows:—

—				May 5.	May 12.	May 19.	May 26.
107 Great Towns	12·0	10·9	11·1	11·5
London	12·9	10·9	10·9	11·0
Birmingham	10·2	8·5	10·8	11·7
Liverpool	11·8	10·9	11·3	13·3
Manchester	13·8	13·7	13·5	11·9
Sheffield	11·7	10·9	11·8	10·2
Leeds	10·6	13·6	11·6	14·5
Bristol	9·3	9·2	11·4	11·6
West Ham	11·6	6·8	7·9	9·9

Infant mortality, based on the average weekly number of live births during the last 52 weeks, was 64 against 68, 58 and 60 in the preceding three weeks: during the last four weeks deaths from measles numbered 89, 70, 60 and 51 respectively.

In London (Administrative County including the City of London) there were 1,512 live births corresponding to an annual rate of 17·3 per 1,000 living: stillbirths numbered 53 corresponding to a rate of 34 per 1,000 total births (including stillborn): the civilian deaths (excluding stillbirths) numbered 957 (12 more than the number in the preceding week): infant mortality based on the average weekly number of live births during the last 52 weeks was 54 against 72, 54, and 63 in the three weeks preceding: during the last four weeks deaths from measles numbered 52, 37, 24 and 26 respectively.

* Population adjusted by the exclusion of non-civilians.

† The populations relate to 1928 except that of Belfast which is the Census figure of 1926 yearly estimates having been discontinued. Deaths in Edinburgh and Glasgow are provisionally corrected by the deduction of deaths of non-residents domiciled in Scotland and by the addition of deaths of residents reported from elsewhere in Scotland during the week: those in Dublin Registration Area and Belfast are corrected by the exclusion of deaths of persons admitted into public institutions from without the respective areas.

‡ As extended 1st April, 1928.

The results apply to the Civil Day or from midnight to midnight. The height of the stem of the barometer is 152 feet above the mean level of the sea; no correction has been applied to the readings to reduce to sea level. Observations are usually taken at 9h. A.M., noon, 3h. P.M., and 9h. P.M. The means of the eye-readings of the barometer, the dry bulb thermometer, and the wet bulb thermometer are converted into mean daily values by the application of corrections deduced from a discussion of the photographic records made during the 50 years ending 1903. With the corrected mean reading of the dry bulb thermometer is combined the corrected mean of the readings of the maximum and minimum thermometers, forming the mean daily value of the temperature of the air (column 8). The mean daily dew point temperature and degree of humidity are deduced from the mean daily values of the dry and wet bulb thermometers by Hygrometric Tables, issued by the Air Ministry.

The average temperature of the air is that derived from a discussion of the observations made at Greenwich during the 65 years ending 1905, and that of horizontal movement of the air from a discussion of the anemometric records for the 50 years ending 1918.

In reading columns 9 and 24 it will be borne in mind that + indicates "higher," and - "lower," than the average.

The values given in column 17 are not corrected for the index error of the thermometer, which cannot be determined.

The record of Electricity is derived from Thomson's self-registering Electrometer. The symbols employed are: -P. positive; N. negative; w. weak; m. moderate; s. strong; v. variable.

The numbers in column 27, derived from the Campbell Stokes Sunshine Instrument show the aggregate duration of bright sunshine each day.

The reading of the barometer increased from 29.56 ins. at the beginning of the week to 29.83 ins. by 9h. on 22nd; decreased to 29.72 ins. by 17h. on 23rd; increased to 30.15 ins. by 3h. on 26th; decreased and was 30.02 ins. by midnight on the same day.

EXPLANATORY STATEMENT.

TABLE 1 shows, for the several towns, the births and deaths (distinguishing deaths from certain causes and those of infants under one year of age) for the week ended last Saturday.

TABLE 2 shows the births and deaths (distinguishing certain causes) and death rates in London and in certain cities in the British Empire and in foreign countries.

TABLE 3 shows the deaths in London at ages and by causes of death and by cause in the current year to date with corresponding figures for previous year.

TABLE 4 is a summary of returns of notified cases of certain Infectious Diseases (*vide infra*).

TABLE 5 shows for (a) London and (b) the Great Towns in the aggregate the births, deaths (distinguishing those of infants under one year of age) and numbers of notified cases of and deaths from certain diseases in each of the preceding thirteen weeks and in the current year to date with corresponding figures for previous year.

TABLE 6 is a Report of the meteorological conditions in certain towns for the week as a whole.

TABLE 7 is a Report of the meteorological observations taken at Greenwich on each day of the week.

WEEKLY SUMMARY OF INFECTIOUS DISEASES (TABLE 4).

1. TABLE 4 is a weekly Summary of notified cases of certain specified infectious diseases in England and Wales and is based upon weekly returns received from the Medical Officers of Health of all Local Sanitary Authorities, including Port Sanitary Authorities. The figures are now included in the present publication by arrangement with the Ministry of Health in pursuance of Section 5 of the Census Act, 1920.

2. The arrangement of this Table is as follows:—

Particulars for London are contained in Part I. Part II. contains particulars for sanitary districts, outside London, arranged under county headings; the counties being entered in alphabetical order. Particulars for Port Sanitary Districts are given in Part III.

Under each county, the names of (a) the Boroughs and Urban Districts and (b) the Rural Districts, are entered in alphabetical order.

The names of Boroughs and Urban Districts with populations of over 10,000 according to the last Census, are marked with a †.

County Boroughs are marked "C.B."

3. The names of districts in respect of which "Nil" returns have been received indicating that no cases of the specified infectious diseases have been notified during the week, are omitted from this Summary.

4. The infectious diseases comprised in this Summary include the more important infectious diseases which are notifiable under the general law, and also cerebro-spinal fever, acute poliomyelitis, plague, acute poli-encephalitis, encephalitis lethargica, pneumonia, dysentery, ophthalmia neonatorum, and puerperal pyrexia, which are notifiable either under the general law or under Orders which were made by the Local Government Board or Minister of Health.

The first five columns of the Summary relate to diseases specified in the headings to the columns: the heading "Diphtheria" includes Membranous Croup, the heading "Enteric Fever" includes Typhoid and Paratyphoid. The sixth column is intended to contain a figure (or figures) relating to one or more of the undermentioned diseases. In order to show to what disease any such figure relates, one of the following symbols is employed viz.:—A, Cholera; B, Plague; C, Puerperal Fever; D, Cerebro-Spinal Fever; E, Acute Poliomyelitis; F, Acute Polio-encephalitis; G, Encephalitis Lethargica; H, Typhus Fever; I, Relapsing Fever; J, Continued Fever; L, Dysentery; M, Ophthalmia Neonatorum; N, Puerperal Pyrexia. Cases of Plague (if any) are mentioned specially in footnotes.

5. Quarterly and annual summaries of the information, adjusted in respect of any returns or corrections received too late for the weekly issues, will be published in due course.

NOTES FOR THE WEEK ENDED 2ND JUNE, 1928.

BIRTHS AND DEATHS.

In the 107 County Boroughs and Great Towns of England and Wales the live births registered in the twenty-second week of the year numbered 5,989 corresponding to an annual rate of 15·8 per 1,000 living: stillbirths numbered 273 corresponding to a rate of 44 per 1,000 total births (including stillborn): the civilian deaths (excluding stillbirths) corrected as far as possible for non-residents numbered 4,198 (146 less than the number in the preceding week).

The annual death-rate in the Aggregate and in the largest of the County Boroughs and Great Towns in each of the last four weeks was as follows:—

—				May 12.	May 19.	May 26.	June 2.
107 Great Towns	10·9	11·1	11·5	11·1
London	10·9	10·9	11·0	10·8
Birmingham	8·5	10·8	11·7	10·7
Liverpool	10·9	11·3	13·3	10·3
Manchester	13·7	13·5	11·9	13·0
Sheffield	10·9	11·8	10·2	10·3
Leeds	13·6	11·6	14·5	12·7
Bristol	9·2	11·4	11·6	11·4
West Ham	6·8	7·9	9·9	9·8

Infant mortality, based on the average weekly number of live births during the last 52 weeks, was 59 against 58, 60 and 64 in the preceding three weeks: during the last four weeks deaths from measles numbered 70, 60, 52 and 56 respectively.

In London (Administrative County including the City of London) there were 1,389 live births corresponding to an annual rate of 15·9 per 1,000 living: stillbirths numbered 48 corresponding to a rate of 33 per 1,000 total births (including stillborn): the civilian deaths (excluding stillbirths) numbered 939 (18 less than the number in the preceding week): infant mortality based on the average weekly number of live births during the last 52 weeks was 63 against 54, 63, and 54 in the three weeks preceding: during the last four weeks deaths from measles numbered 37, 24, 26 and 24 respectively.

BELFAST† ..	415,151	179	-	110	12	-	2	-	2	-	-	1

* Population adjusted by the exclusion of non-civilians.

† The populations relate to 1926 except that of Belfast which is the Census figure of 1926 yearly estimates having been discontinued. Deaths in Edinburgh and Glasgow are provisionally corrected by the deduction of deaths of non-residents domiciled in Scotland and by the addition of deaths of residents reported from elsewhere in Scotland during the week: those in Dublin Registration Area and Belfast are corrected by the exclusion of deaths of persons admitted into public institutions from without the respective areas.

‡ As extended 1st April, 1928.

1928**

LONDON:

PRINTED AND PUBLISHED BY HIS MAJESTY'S STATIONERY OFFICE.

To be purchased directly from H.M. STATIONERY OFFICE at the following addresses:
Adastral House, Kingsway, London, W.C.2; 120, George Street, Edinburgh;
York Street, Manchester; 1, St. Andrew's Crescent, Cardiff;
15, Donegall Square West, Belfast;
or through any Bookseller.

1928.

Price 6d. net.

EXPLANATORY STATEMENT.

TABLE 1 shows, for the several towns, the births and deaths (distinguishing deaths from certain causes and those of infants under one year of age) for the week ended last Saturday.

TABLE 2 shows the births and deaths (distinguishing certain causes) and death rates in London and in certain cities in the British Empire and in foreign countries.

TABLE 3 shows the deaths in London at ages and by causes of death and by cause in the current year to date with corresponding figures for previous year.

TABLE 4 is a summary of returns of notified cases of certain Infectious Diseases (*vide infra*).

TABLE 5 shows for (a) London and (b) the Great Towns in the aggregate the births, deaths (distinguishing those of infants under one year of age) and numbers of notified cases of and deaths from certain diseases in each of the preceding thirteen weeks and in the current year to date with corresponding figures for previous year.

TABLE 6 is a Report of the meteorological conditions in certain towns for the week as a whole.

TABLE 7 is a Report of the meteorological observations taken at Greenwich on each day of the week.

WEEKLY SUMMARY OF INFECTIOUS DISEASES (TABLE 4).

1. TABLE 4 is a weekly Summary of notified cases of certain specified infectious diseases in England and Wales and is based upon weekly returns received from the Medical Officers of Health of all Local Sanitary Authorities, including Port Sanitary Authorities. The figures are now included in the present publication by arrangement with the Ministry of Health in pursuance of Section 5 of the Census Act, 1920.

2. The arrangement of this Table is as follows:—

Particulars for London are contained in Part I. Part II. contains particulars for sanitary districts, outside London, arranged under county headings; the counties being entered in alphabetical order. Particulars for Port Sanitary Districts are given in Part III.

Under each county, the names of (a) the Boroughs and Urban Districts and (b) the Rural Districts, are entered in alphabetical order.

The names of Boroughs and Urban Districts with populations of over 10,000 according to the last Census, are marked with a †.

County Boroughs are marked "C.B."

3. The names of districts in respect of which "Nil" returns have been received indicating that no cases of the specified infectious diseases have been notified during the week, are omitted from this Summary.

4. The infectious diseases comprised in this Summary include the more important infectious diseases which are notifiable under the general law, and also cerebro-spinal fever, acute poliomyelitis, plague, acute poliomyelitis, encephalitis lethargica, pneumonia, dysentery, ophthalmia neonatorum, and puerperal pyrexia, which are notifiable either under the general law or under Orders which were made by the Local Government Board or Minister of Health.

The first five columns of the Summary relate to diseases specified in the headings to the columns: the heading "Diphtheria" includes Membranous Croup, the heading "Enteric Fever" includes Typhoid and Paratyphoid. The sixth column is intended to contain a figure (or figures) relating to one or more of the undermentioned diseases. In order to show to what disease any such figure relates, one of the following symbols is employed viz.:—A, Cholera; B, Plague; C, Puerperal Fever; D, Cerebro-Spinal Fever; E, Acute Poliomyelitis; F, Acute Polio-encephalitis; G, Encephalitis Lethargica; H, Typhus Fever; I, Relapsing Fever; J, Continued Fever; L, Dysentery; M, Ophthalmia Neonatorum; N, Puerperal Pyrexia. Cases of Plague (if any) are mentioned specially in footnotes.

5. Quarterly and annual summaries of the information, adjusted in respect of any returns or corrections received too late for the weekly issues, will be published in due course.

NOTES FOR THE WEEK ENDED 9TH JUNE, 1928.

BIRTHS AND DEATHS.

In the 107 County Boroughs and Great Towns of England and Wales the live births registered in the twenty-third week of the year numbered 7,539 corresponding to an annual rate of 19·9 per 1,000 living: stillbirths numbered 281 corresponding to a rate of 36 per 1,000 total births (including stillborn): the civilian deaths (excluding stillbirths) corrected as far as possible for non-residents numbered 4,070, (128 less than the number in the preceding week).

The annual death-rate in the Aggregate and in the largest of the County Boroughs and Great Towns in each of the last four weeks was as follows:—

—				May 19.	May 26.	June 2.	June 9.
107 Great Towns	11·1	11·5	11·1	10·8
London	10·9	11·0	10·8	10·5
Birmingham	10·8	11·7	10·7	10·7
Liverpool	11·3	13·3	10·3	13·4
Manchester	13·5	11·9	13·0	12·8
Sheffield	11·8	10·2	10·3	12·7
Leeds	11·6	14·5	12·7	10·2
Bristol	11·4	11·6	11·4	9·2
West Ham	7·9	9·9	9·8	9·8

Infant mortality, based on the average weekly number of live births during the last 52 weeks, was 55 against 60, 64 and 59 in the preceding three weeks: during the last four weeks deaths from measles numbered 60, 52, 56 and 34 respectively.

In London (Administrative County including the City of London) there were 1,626 live births corresponding to an annual rate of 18·6 per 1,000 living: stillbirths numbered 47 corresponding to a rate of 28 per 1,000 total births (including stillborn): the civilian deaths (excluding stillbirths) numbered 913 (26 less than the number in the preceding week): infant mortality based on the average weekly number of live births during the last 52 weeks was 49 against 63, 54, and 63 in the three weeks preceding: during the last four weeks deaths from measles numbered 24, 26, 24 and 12 respectively.

* Population adjusted by the exclusion of non-civilians.

† The populations relate to 1923 except that of Belfast which is the Census figure of 1926 yearly estimates having been discontinued. Deaths in Edinburgh and Glasgow are provisionally corrected by the deduction of deaths of non-residents domiciled in Scotland and by the addition of deaths of residents reported from elsewhere in Scotland during the week: those in Dublin Registration Area and Belfast are corrected by the exclusion of deaths of persons admitted into public institutions from without the respective areas.

‡ As extended 1st April, 1923.

DATE.	ELECTRICITY. (For explanation of symbols, see Note.)	Registered Sunshine in hours.	Sun above Horizon in hours	GENERAL REMARKS.
SUNDAY ..	3 WP	14.8	16.3	Cloudless till 10 ¹⁵ h., then little cloud. Mist in morning.
MONDAY ..	4 WP	0.2	16.3	Becoming cloudy, thin cloud by 1h. Overcast from 7h. Mist and dew in morning. Shower 12h. 5m., and frequent slight rain 14h. 45m. till 19h. 45m.
TUESDAY ..	5 WP	0.8	16.3	Overcast generally. Rain 0h. 45m. till 1h., damping 3h. and about 22h. 40m.
WEDNESDAY	6 WP	8.0	16.4	Variably cloudy till 6h., very cloudy or nearly overcast till 11 ¹⁵ h., cloudy generally till 13 ¹⁵ h., nearly cloudless at 16h. Cloud- ing up at 23 ¹⁵ h. Damping 6 ¹⁵ h. and shower about 6h.
THURSDAY	7 WP	3.6	16.4	Overcast generally till noon; variably cloudy till 21 ¹⁵ h., becoming overcast by 23h. Rain, heavy at times, 4h. till 8 ¹⁵ h., then slight rain till 10 ¹⁵ h. Slight shower 13h. Mist or fog 4h. till 5h.
FRIDAY ..	8 WP till 12 ¹⁵ h. v till 13h., then wP.	6.1	16.4	Overcast or nearly so. Partially cloudy period 13h. till 17h. Damping 4h. 20m., rain 6h. till 8h. 30m., shower 12h. 30m., and frequent rain from 21h. 30m.
SATURDAY	9 WP	8.7	16.4	Nearly overcast till 9h., variably cloudy till 20h., clearing to few clouds by 21h. Clouding up 22h. to very cloudy by 23h. Frequent rain till 9h., and showers 16h. 30m. and 18h. 30m. Brisk wind 11h. till 19h.
No. of Col. ..	26	Sum 42.2	Sum 114.5	27
				28

The results apply to the Civil Day or from midnight to midnight.

The height of the cistern of the barometer is 162 feet above the mean level of the sea; no correction has been applied to the readings to reduce to sea level.
Observations are usually taken at 9h. A.M., noon, 3h. P.M., and 9h. P.M. The means of the eye-readings of the barometer, the dry bulb thermometer, and the wet bulb thermometer are converted into mean daily values by the application of corrections deduced from a discussion of the photographic records made during the 50 years ending 1903. With the corrected mean reading of the dry bulb thermometer is combined the corrected mean of the readings of the maximum and minimum thermometers, forming the mean daily value of the temperature of the air (column 8). The mean daily dew point temperature and degree of humidity are deduced from the mean daily values of the dry and wet bulb thermometers by Hygrometric Tables, issued by the Air Ministry.

The average temperature of the air is that derived from a discussion of the observations made at Greenwich during the 65 years ending 1903, and that of horizontal movements of the air from a discussion of the anemometric records for the 60 years ending 1913.

In reading columns 9 and 24 it will be borne in mind that + indicates "higher," and - "lower" than the average.

The values given in column 17 are not corrected for the index error of the thermometer, which cannot be determined.

The record of Electricity is derived from Thomson's self-registering Electrometer s. strong; v., variable.
The symbols employed are: -P. positive; N. negative; w. weak; m. moderate; s. strong.

The numbers in column 27, derived from the Campbell Stokes Sunshine Instrument show the aggregate duration of bright sunshine each day.
The reading of the barometer decreased from 30.11 ins. at the beginning of the week to 29.64 ins. by 17h. on June 8th, increased to 29.76 ins. by 9h. on June 5th, decreased to 29.25 ins. by 6h. on June 8th; increased to 29.39 ins. by 18h. on June 8th, decreased to 29.20 ins. by 7h. on June 9th; increased and was 29.24 ins. by midnight on the same day.

DURING THE WEEK ENDED

**SATURDAY, 16TH JUNE,
1928**

LONDON:

PRINTED AND PUBLISHED BY HIS MAJESTY'S STATIONERY OFFICE.

To be purchased directly from H.M. STATIONERY OFFICE at the following addresses:

Adastral House, Kingsway, London, W.C.2; 120, George Street, Edinburgh;

York Street, Manchester; 1, St. Andrew's Crescent, Cardiff;

15, Donegall Square West, Belfast;

or through any Bookseller.

1928.

Price 6d. net.

EXPLANATORY STATEMENT.

TABLE 1 shows, for the several towns, the births and deaths (distinguishing deaths from certain causes and those of infants under one year of age) for the week ended last Saturday.

TABLE 2 shows the births and deaths (distinguishing certain causes) and death rates in London and in certain cities in the British Empire and in foreign countries.

TABLE 3 shows the deaths in London at ages and by causes of death and by cause in the current year to date with corresponding figures for previous year.

TABLE 4 is a summary of returns of notified cases of certain Infectious Diseases (*vide infra*).

TABLE 5 shows for (a) London and (b) the Great Towns in the aggregate the births, deaths (distinguishing those of infants under one year of age) and numbers of notified cases of and deaths from certain diseases in each of the preceding thirteen weeks and in the current year to date with corresponding figures for previous year.

TABLE 6 is a Report of the meteorological conditions in certain towns for the week as a whole.

TABLE 7 is a Report of the meteorological observations taken at Greenwich on each day of the week.

WEEKLY SUMMARY OF INFECTIOUS DISEASES (TABLE 4).

1. TABLE 4 is a weekly Summary of notified cases of certain specified infectious diseases in England and Wales and is based upon weekly returns received from the Medical Officers of Health of all Local Sanitary Authorities, including Port Sanitary Authorities. The figures are now included in the present publication by arrangement with the Ministry of Health in pursuance of Section 5 of the Census Act, 1920.

2. The arrangement of this Table is as follows:—

Particulars for London are contained in Part I. Part II. contains particulars for sanitary districts, outside London, arranged under county headings; the counties being entered in alphabetical order. Particulars for Port Sanitary Districts are given in Part III.

Under each county, the names of (a) the Boroughs and Urban Districts and (b) the Rural Districts, are entered in alphabetical order.

The names of Boroughs and Urban Districts with populations of over 10,000 according to the last Census, are marked with a †.

County Boroughs are marked "C.B."

3. The names of districts in respect of which "Nil" returns have been received indicating that no cases of the specified infectious diseases have been notified during the week, are omitted from this Summary.

4. The infectious diseases comprised in this Summary include the more important infectious diseases which are notifiable under the general law, and also cerebro-spinal fever, acute poliomyelitis, plague, acute poli-encephalitis, encephalitis lethargica, pneumonia, dysentery, ophthalmia neonatorum, and puerperal pyrexia, which are notifiable either under the general law or under Orders which were made by the Local Government Board or Minister of Health.

The first five columns of the Summary relate to diseases specified in the headings to the columns: the heading "Diphtheria" includes Membranous Croup, the heading "Enteric Fever" includes Typhoid and Paratyphoid. The sixth column is intended to contain a figure (or figures) relating to one or more of the undermentioned diseases. In order to show to what disease any such figure relates, one of the following symbols is employed viz.:—A, Cholera; B, Plague; C, Puerperal Fever; D, Cerebro-Spinal Fever; E, Acute Poliomyelitis; F, Acute Poli-encephalitis; G, Encephalitis Lethargica; H, Typhus Fever; I, Relapsing Fever; J, Continued Fever; L, Dysentery; M, Ophthalmia Neonatorum; N, Puerperal Pyrexia. Cases of Plague (if any) are mentioned specially in footnotes.

5. Quarterly and annual summaries of the information, adjusted in respect of any returns or corrections received too late for the weekly issues, will be published in due course.

NOTES FOR THE WEEK ENDED 16TH JUNE, 1928.

BIRTHS AND DEATHS.

In the 107 County Boroughs and Great Towns of England and Wales the live births registered in the twenty-fourth week of the year numbered 7,219 corresponding to an annual rate of 19·1 per 1,000 living: stillbirths numbered 301 corresponding to a rate of 40 per 1,000 total births (including stillborn): the civilian deaths (excluding stillbirths) corrected as far as possible for non-residents numbered 3,898, (182 less than the number in the preceding week).

The annual death-rate in the Aggregate and in the largest of the County Boroughs and Great Towns in each of the last four weeks was as follows:—

	May 26.	June 2.	June 9.	June 16.
107 Great Towns	11·5	11·1	10·8	10·3
London	11·0	10·8	10·5	9·9
Birmingham	11·7	10·7	10·7	10·2
Liverpool	13·3	10·3	13·4	11·1
Manchester	11·9	13·0	12·8	11·4
Sheffield	10·2	10·3	12·7	9·8
Leeds	14·5	12·7	10·2	11·3
Bristol	11·6	11·4	9·2	9·5
West Ham	9·9	9·8	9·8	12·2

Infant mortality, based on the average weekly number of live births during the last 52 weeks, was 62 against 64, 59 and 55 in the preceding three weeks.

In London (Administrative County including the City of London) there were 1,600 live births corresponding to an annual rate of 18·3 per 1,000 living: stillbirths numbered 53 corresponding to a rate of 32 per 1,000 total births (including stillborn): the civilian deaths (excluding stillbirths) numbered 859 (54 less than the number in the preceding week): infant mortality based on the average weekly number of live births during the last 52 weeks was 49 against 54, 63, and 49 in the three weeks preceding.

During the week small-pox was mentioned as a cause of death in one case. This has been provisionally classified to small-pox and assigned to Coventry C.B.

* Population adjusted by the exclusion of non-civilians.

† The populations relate to 1928 except that of Belfast which is the Census figure of 1926 yearly estimates having been discontinued. Deaths in Edinburgh and Glasgow are provisionally erected by the deduction of deaths of non-residents domiciled in Scotland and by the addition of deaths of residents reported from elsewhere in Scotland during the week; those in Dublin Registration Area and Belfast are corrected by the exclusion of deaths of persons admitted into public institutions without the respective areas.

No. of Col.	26	Sum 55.6	Sum 115.5	
			27	28	

The results apply to the Civil Day or from midnight to midnight.

The height of the cistern of the barometer is 152 feet above the mean level of the sea; no correction has been applied to the readings to reduce to sea level.

Observations are usually taken at 9h. A.M., noon, 3h. P.M., and 9h. P.M. The means of the eye-readings of the barometer, the dry bulb thermometer, and the wet bulb thermometer are converted into mean daily values by the application of corrections deduced from a discussion of the photographic records made during the 50 years ending 1903. With the corrected mean reading of the dry bulb thermometer is combined the corrected mean of the readings of the maximum and minimum thermometers, forming the mean daily value of the temperature of the air (column 8). The mean daily dew point temperature and degree of humidity are deduced from the mean daily values of the dry and wet bulb thermometers by Hygrometric Tables, issued by the Air Ministry.

The average temperature of the air is that derived from a discussion of the observations made at Greenwich during the 65 years ending 1905, and that of horizontal movement of the air from a discussion of the anemometric records for the 50 years ending 1913.

In reading columns 9 and 24 it will be borne in mind that + indicates "higher," and - "lower" than the average.

The values given in column 17 are not corrected for the index error of the thermometer, which cannot be determined.

The record of Electricity is derived from Thomson's self-registering Electrometer. The symbols employed are: -P. positive; N. negative; w. weak; m. moderate; s. strong; v. variable.

The numbers in column 27, derived from the Campbell Stokes Sunshine Instrument show the aggregate duration of bright sunshine each day.

The reading of the barometer increased from 29.24 ins. at the beginning of the week to 30.10 ins. by 9h. on 12th; decreased to 29.43 ins. by 3h. on 14th; increased to 30.04 ins. by 11h. on 15th; decreased generally and was 30.03 ins. by midnight on the 16th.

EXPLANATORY STATEMENT.

TABLE 1 shows, for the several towns, the births and deaths (distinguishing deaths from certain causes and those of infants under one year of age) for the week ended last Saturday.

TABLE 2 shows the births and deaths (distinguishing certain causes) and death rates in London and in certain cities in the British Empire and in foreign countries.

TABLE 3 shows the deaths in London at ages and by causes of death and by cause in the current year to date with corresponding figures for previous year.

TABLE 4 is a summary of returns of notified cases of certain Infectious Diseases (*vide infra*).

TABLE 5 shows for (a) London and (b) the Great Towns in the aggregate the births, deaths (distinguishing those of infants under one year of age) and numbers of notified cases of and deaths from certain diseases in each of the preceding thirteen weeks and in the current year to date with corresponding figures for previous year.

TABLE 6 is a Report of the meteorological conditions in certain towns for the week as a whole.

TABLE 7 is a Report of the meteorological observations taken at Greenwich on each day of the week.

WEEKLY SUMMARY OF INFECTIOUS DISEASES (TABLE 4).

1. TABLE 4 is a weekly Summary of notified cases of certain specified infectious diseases in England and Wales and is based upon weekly returns received from the Medical Officers of Health of all Local Sanitary Authorities, including Port Sanitary Authorities. The figures are now included in the present publication by arrangement with the Ministry of Health in pursuance of Section 5 of the Census Act, 1920.

2. The arrangement of this Table is as follows:—

Particulars for London are contained in Part I. Part II. contains particulars for sanitary districts, outside London, arranged under county headings; the counties being entered in alphabetical order. Particulars for Port Sanitary Districts are given in Part III.

Under each county, the names of (a) the Boroughs and Urban Districts and (b) the Rural Districts, are entered in alphabetical order.

The names of Boroughs and Urban Districts with populations of over 10,000 according to the last Census, are marked with a †.

County Boroughs are marked "C.B."

3. The names of districts in respect of which "Nil" returns have been received indicating that no cases of the specified infectious diseases have been notified during the week, are omitted from this Summary.

4. The infectious diseases comprised in this Summary include the more important infectious diseases which are notifiable under the general law, and also cerebro-spinal fever, acute poliomyelitis, plague, acute polio-encephalitis, encephalitis lethargica, pneumonia, dysentery, ophthalmia neonatorum, and puerperal pyrexia, which are notifiable either under the general law or under Orders which were made by the Local Government Board or Minister of Health.

The first five columns of the Summary relate to diseases specified in the headings to the columns: the heading "Diphtheria" includes Membranous Croup, the heading "Enteric Fever" includes Typhoid and Paratyphoid. The sixth column is intended to contain a figure (or figures) relating to one or more of the undermentioned diseases. In order to show to what disease any such figure relates, one of the following symbols is employed viz.:—A, Cholera; B, Plague; C, Puerperal Fever; D, Cerebro-Spinal Fever; E, Acute Poliomyelitis; F, Acute Polio-encephalitis; G, Encephalitis Lethargica; H, Typhus Fever; I, Relapsing Fever; J, Continued Fever; L, Dysentery; M, Ophthalmia Neonatorum; N, Puerperal Pyrexia. Cases of Plague (if any) are mentioned specially in footnotes.

5. Quarterly and annual summaries of the information, adjusted in respect of any returns or corrections received too late for the weekly issues, will be published in due course.

NOTES FOR THE WEEK ENDED 23RD JUNE, 1928.

BIRTHS AND DEATHS.

In the 107 County Boroughs and Great Towns of England and Wales the live births registered in the twenty-fifth week of the year numbered 6,855 corresponding to an annual rate of 18·2 per 1,000 living: stillbirths numbered 258 corresponding to a rate of 36 per 1,000 total births (including stillborn): the civilian deaths (excluding stillbirths) corrected as far as possible for non-residents numbered 3,785, (113 less than the number in the preceding week).

The annual death-rate in the Aggregate and in the largest of the County Boroughs and Great Towns in each of the last four weeks was as follows:—

—	June 2.	June 9.	June 16.	June 23.
107 Great Towns	11·1	10·8	10·3	10·0
London	10·8	10·5	9·9	9·7
Birmingham	10·7	10·7	10·2	10·1
Liverpool	10·3	13·4	11·1	10·5
Manchester	13·0	12·8	11·4	11·3
Sheffield	10·3	12·7	9·8	11·6
Leeds	12·7	10·2	11·3	11·3
Bristol	11·4	9·2	9·5	8·7
West Ham	9·8	9·8	12·2	7·9

Infant mortality, based on the average weekly number of live births during the last 52 weeks, was 51 against 59, 55 and 62 in the preceding three weeks.

In London (Administrative County including the City of London) there were 1,536 live births corresponding to an annual rate of 17·6 per 1,000 living: stillbirths numbered 38 corresponding to a rate of 24 per 1,000 total births (including stillborn): the civilian deaths (excluding stillbirths) numbered 848 (11 less than the number in the preceding week): infant mortality based on the average weekly number of live births during the last 52 weeks was 47 against 63, 49, and 49 in the three weeks preceding.

DEATHS FROM SMALL-POX.

Formerly the record of deaths from small-pox published in the weekly return was restricted to cases belonging to the County Boroughs and Great Towns (including Greater London). A supplementary statement, first shown in the return for the week ended 19th May 1928, is now published at monthly intervals giving particulars of other deaths in England and Wales from small-pox, while the complete quarterly record will appear, as usual, in the quarterly return.

The returns received for the month of May last include in addition to the deaths already shown in the weekly return, 2 deaths certified as due to small-pox either as principal or contributory cause. These deaths have been provisionally classed to small-pox and assigned to the following areas:—

Stoke-on-Trent C.B.

Yorkshire, West Riding Darton U.D.

* Population adjusted by the exclusion of non-civilians.

† The populations relate to 1928 except that of Belfast which is the Census figure of 1926 yearly estimates having been discontinued. Deaths in Edinburgh and Glasgow are provisionally corrected by the deduction of deaths of non-residents domiciled in Scotland and by the addition of deaths of residents reported from elsewhere in Scotland during the week: those in Dublin Registration Area and Belfast are corrected by the exclusion of deaths of persons admitted into public institutions from without the respective areas.

‡ As extended 1st April, 1928.

DATE.	ELECTRICITY. (For explanation of symbols, see Note.)	Registered Sunshine in hours	Sun above Horizon in hours	GENERAL REMARKS.
JUNE.				
SUNDAY 17	wP	7.9	16.6	Partially cloudy till 9h.; nearly over- cast till 20h.; then variably cloudy. Brisk wind 12h. till 19h.
MONDAY .. 18	wP till 19h.; then variably wN and wP.	0.7	16.6	Overcast generally. Damping 5h. and and 22h. Rain 15h. till 16h.; 17h. till 20h.; and occasionally from 22h.
TUESDAY .. 19	wP till 3h.; wN till 4h.; then wP.	4.3	16.6	Nearly overcast generally. Occasional rain till 4h. Damping 18h. till 18h.
WEDNESDAY 20	wP	10.9	16.6	Cloudy generally. Rain 4h.
THURSDAY 21	wP.	2.9	16.6	Partially cloudy becoming overcast by 8h. Frequent damping between 10h. and 21h.
FRIDAY 22	wP	1.2	16.6	Overcast till 17h.; then variably cloudy.
SATURDAY 23	wP	10.9	16.6	Nearly cloudless till 5h., then very cloudy becoming overcast by 13h. Partial solar halo 17h. Dew at night.
No. of Col. . . .	26	Sum 38.8	Sum 116.2	28

The results apply to the Civil Day or from midnight to midnight.

The height of the cistern of the barometer is 152 feet above the mean level of the sea; no correction has been applied to the readings to reduce to sea level. P.M. The means of the eye-readings of the barometer, the dry bulb thermometer, and the wet bulb thermometer are converted into mean daily values by the application of corrections deduced from a discussion of the photographic records made during the 30 years ending 1903. With the corrected mean reading of the dry bulb thermometer is combined the corrected mean of the readings of the maximum and minimum thermometers, forming the mean daily value of the temperature of the air (column 8). The mean daily dew point temperature and degree of humidity are deduced from the mean daily values of the dry and wet bulb thermometers by Hygrometric Tables, issued by the Air Ministry.

The average temperature of the air is that derived from a discussion of the observations made at Greenwich during the 65 years ending 1903, and that of horizontal movement of the air from a discussion of the anemometric records for the 50 years ending 1913.

In reading columns 9 and 24 it will be borne in mind that + indicates "higher," and - "lower" than the average.

The values given in column 17 are not corrected for the index error of the thermometer, which cannot be determined.

The record of Electricity is derived from Thomson's self-registering Electrometer. The symbols employed are: -P. positive; N. negative; w. weak; m. moderate; s. strong; v. variable.

The numbers in column 27, derived from the Campbell Stokes Sunshine Instrument show the aggregate duration of bright sunshine each day.

The reading of the barometer decreased from 30.03 ins. at the beginning of the week to 29.54 ins. by 15h. on 18th; increased to 29.96 ins. by 13h. on 21st; decreased to 29.85 ins. by 17h. on 22nd; increased and was 29.91 ins. by midnight on the 23rd.

EXPLANATORY STATEMENT.

TABLE 1 shows, for the several towns, the births and deaths (distinguishing deaths from certain causes and those of infants under one year of age) for the week ended last Saturday.

TABLE 2 shows the births and deaths (distinguishing certain causes) and death rates in London and in certain cities in the British Empire and in foreign countries.

TABLE 3 shows the deaths in London at ages and by causes of death and by cause in the current year to date with corresponding figures for previous year.

TABLE 4 is a summary of returns of notified cases of certain Infectious Diseases (*vide infra*).

TABLE 5 shows for (a) London and (b) the Great Towns in the aggregate the births, deaths (distinguishing those of infants under one year of age) and numbers of notified cases of and deaths from certain diseases in each of the preceding thirteen weeks and in the current year to date with corresponding figures for previous year.

TABLE 6 is a Report of the meteorological conditions in certain towns for the week as a whole.

TABLE 7 is a Report of the meteorological observations taken at Greenwich on each day of the week.

WEEKLY SUMMARY OF INFECTIOUS DISEASES (TABLE 4).

1. TABLE 4 is a weekly Summary of notified cases of certain specified infectious diseases in England and Wales and is based upon weekly returns received from the Medical Officers of Health of all Local Sanitary Authorities, including Port Sanitary Authorities. The figures are now included in the present publication by arrangement with the Ministry of Health in pursuance of Section 5 of the Census Act, 1920.

2. The arrangement of this Table is as follows:—

Particulars for London are contained in Part I. Part II. contains particulars for sanitary districts, outside London, arranged under county headings; the counties being entered in alphabetical order. Particulars for Port Sanitary Districts are given in Part III.

Under each county, the names of (a) the Boroughs and Urban Districts and (b) the Rural Districts, are entered in alphabetical order.

The names of Boroughs and Urban Districts with populations of over 10,000 according to the last Census, are marked with a †.

County Boroughs are marked "C.B."

3. The names of districts in respect of which "Nil" returns have been received indicating that no cases of the specified infectious diseases have been notified during the week, are omitted from this Summary.

4. The infectious diseases comprised in this Summary include the more important infectious diseases which are notifiable under the general law, and also cerebro-spinal fever, acute poliomyelitis, plague, acute polio-encephalitis, encephalitis lethargica, pneumonia, dysentery, ophthalmia neonatorum, and puerperal pyrexia, which are notifiable either under the general law or under Orders which were made by the Local Government Board or Minister of Health.

The first five columns of the Summary relate to diseases specified in the headings to the columns: the heading "Diphtheria" includes Membranous Croup, the heading "Enteric Fever" includes Typhoid and Paratyphoid. The sixth column is intended to contain a figure (or figures) relating to one or more of the undermentioned diseases. In order to show to what disease any such figure relates, one of the following symbols is employed viz.:—A, Cholera; B, Plague; C, Puerperal Fever; D, Cerebro-Spinal Fever; E, Acute Poliomyelitis; F, Acute Polio-encephalitis; G, Encephalitis Lethargica; H, Typhus Fever; I, Relapsing Fever; J, Continued Fever; L, Dysentery; M, Ophthalmia Neonatorum; N, Puerperal Pyrexia. Cases of Plague (if any) are mentioned specially in footnotes.

5. Quarterly and annual summaries of the information, adjusted in respect of any returns or corrections received too late for the weekly issues, will be published in due course.

NOTES FOR THE WEEK ENDED 30TH JUNE, 1928.

BIRTHS AND DEATHS

In the 107 County Boroughs and Great Towns of England and Wales the live births registered in the twenty-sixth week of the year numbered 6,300 corresponding to an annual rate of 16·7 per 1,000 living: stillbirths numbered 333 corresponding to a rate of 50 per 1,000 total births (including stillborn): the civilian deaths (excluding stillbirths) corrected as far as possible for non-residents numbered 3,820 (37 more than the number in the preceding week).

The annual death-rate in the Aggregate and in the largest of the County Boroughs and Great Towns in each of the last four weeks was as follows:—

—	June 9.	June 16.	June 23.	June 30.
107 Great Towns	10·8	10·3	10·0	10·1
London	10·5	9·9	9·7	10·1
Birmingham	10·7	10·2	10·1	10·7
Liverpool	13·4	11·1	10·5	10·4
Manchester	12·8	11·4	11·2	11·7
Sheffield	12·7	9·8	11·6	10·3
Leeds	10·2	11·3	11·3	11·8
Bristol	9·2	9·5	8·7	9·7
West Ham	9·8	12·2	7·9	8·8

Infant mortality, based on the average weekly number of live births during the last 52 weeks, was 48 against 55, 62 and 51 in the preceding three weeks.

In London (Administrative County including the City of London) there were 1,411 live births corresponding to an annual rate of 16·2 per 1,000 living: stillbirths numbered 61 corresponding to a rate of 41 per 1,000 total births (including stillborn): the civilian deaths (excluding stillbirths) numbered 876 (28 more than the number in the preceding week): infant mortality based on the average weekly number of live births during the last 52 weeks was 41 against 49, 49, and 47 in the three weeks preceding.

Table 1.—107 COUNTY BOROUGHs and
GREAT TOWNS, GREATER LONDON,
and FOUR SCOTTISH and IRISH TOWNS.

BIRTHS and DEATHS registered in the
week ended 30th June, 1928.

TOWNS.	ESTIMATED POPULATION, Mid. 1927.	LIVE BIRTHS.	STILLBIRTHS.	DEATHS (excluding Stillbirths).	Deaths of Infants under 1 Year of Age.	Including Deaths from					Diarrhoea and Enteritis under 2 years.
						Enteric Fever.	Measles.	Scarlet Fever.	Whooping Cough.	Diphtheria.

* Population adjusted by the exclusion of non-civilians.

† The populations relate to 1928 except that of Belfast which is the Census figure of 1926 yearly estimates having been discontinued. Deaths in Edinburgh and Glasgow are provisionally corrected by the deduction of deaths of non-residents domiciled in Scotland and by the addition of deaths of residents reported from elsewhere in Scotland during the week; those in Dublin Registration Area and Belfast are corrected by the exclusion of deaths of persons admitted into public institutions from without the respective areas.

‡ As extended 1st April, 1928.
